Subject: The Galactic Federation. Part 2.
May 12, 2011.

Here are some space people who resemble certain critters on this Earth.

.....

Member

Name: Pegasus Star League.

Accepted into the Galactic Federation: 3.78 million years ago

(They were originally a series of special colonies founded by the Sirian Governing Council some 4 million years ago).

Location: The constellation of Pegasus is a vast cluster of over 1,000 stars, located between the constellations of Cygnus and Aquarius.

Distance From Earth: Between 200 and 3,000 light years.

Life Form Type: There are three major types of humanoids located in this star league. The first type strongly resembles the Sirian human in height and appearance and is divided into the same white and blue skin types. The second type is a thinner human type with red or orange skin. The final type is a hybrid formed from the dinoid and second humanoid race.

Physical Appearance: The first type resembles that of the original Sirius B humanoid colonists: the men vary from perfectly formed muscular physiques to child-like bodies, and are 6 feet, 6 inches to 7 feet, 4 inches (1.98 to 2.24 meters) in height, with blonde to light brown hair and light blue to green-colored eyes. The woman are extremely voluptuous in appearance and are 6 feet, 2 inches to 6 feet, 8 inches (1.88 meters to 2.03 meters) tall. They have either extremely pale white or light blue skin.

The second humanoid type slightly resembles the first in height and/or body types, except for two major differences. First, the skin, as well as the hair, is either a light red or a dark orange in color. Second, the eyes are more cat-like in appearance and the iris is either red or a dark blue. This group originally came from some of the more distant stars in the Lyra constellation.

Webmaster's note: these eyes resemble the animated eyes on the 'Galactic Federation Members' intro webpage.

The hybrid third type has a scaly type of skin with more pronounced cat-like eyes that are either red, brown or pale yellow. The body, legs, neck, and arms are more muscular than a human and have a number of thick vein-like protuberances running their length. Each hand and foot ends in 4 thin, long fingers or toes, with a small claw at its end. The males are some 7 to 8 feet (2.13 to 2.44 meters) in height, while the females range from 6 feet, 10 inches to 7 feet, 7 inches (2.08 to 2.31 meters) tall.

Special Traits and Abilities: The beings from Pegasus are known for their prowess as innovators, scientists, and diplomats.

Average Amount of Sleep Needed: One and one-half to three hours, depending on the species.

Language: There are two types of languages spoken. One is slightly toned and harmonic-sounding, while the other is more guttural and coarse.

Mother Ship and Other Craft: Three types of ships are operating in or near Earth. The first type is a defense ship that resembles a rounded equilateral triangle. Each of its sides is approximately 74 feet (22.56 meters) in length. The second type is a scout ship that is oblong in shape with an average diameter of about 85 feet (25.9 meters). The third ship is a double lens atmospheric command ship that is approximately 1300 feet (402 meters) in length.

Name: Star-Nation of Mintaka (formerly part of the Orion League).

Accepted into the Galactic Federation: Three years ago.

Location: One of three bright stars in the famed Belt of Orion (The other two are AlNitak and AlNilam.)

Distance From Earth: Some 233 Light Years from Earth.

Life Form Type: Primarily an Amphiboid species; a few Reptoid and Dinoid hybrids live among them.

Physical Appearance: In many ways, Mintakans resemble the frogs and toads of Earth. There are, however, some major differences.

They are mainly bipedal in stature. Their skin, smooth and hairless, is noted for its iridescent colors, which range from bright reds, oranges and greens, to yellows and browns.

Unlike those of Earth's amphibians, the eyes are not too bulgy, but are quite large, wraparound and bright red, orange or greenish-yellow in color. The nose consists of two small slits above a very thin set of lips. The mouth, when opened, is very large and frog-like. The ears are two small round circles on either side of the head.

The head is large and seemingly disproportionate to the rest of the body, while the neck seems to be non-existent. The body, arms and legs are very muscular. Toes and fingers are long, thin, webbed and four in number: toes have small claws.

The males, slightly smaller than the females, are between 7 to 8 feet (2.13 to 2.44 meters) in height. The females, slightly larger, range from 7.5 to 8.5 feet (2.29 to 2.59 meters) tall. Mintakans are also noted for a series of three small, thin, interconnected riles than run up their backs and end at the top of their heads.

Special Traits and Abilities: Noted for their great proficiency in psychology, as well as in all methods of mind manipulation. They have a great body of scientific knowledge and vast libraries of inner wisdom that go back over 15 million years.

Average Amount of Sleep Needed: 4-6 hours per day.

Language: Sounds very tonal, but also very deep and guttural.

Mother Ship and Other Craft: Almost mushroom-like in appearance: resemble the large spaceship at the end of the movie Close Encounters. Vary in size from 50 to 150 feet (15.2 to 46 meters) in diameter. Mother ships are very large, almost 100 to 1000 miles (160 to 1600 Kilometers) across. The larger ones are very self-sufficient and are usually kept only in deep space.

Name: The Confederation of Fomalhaut.

Accepted into the Galactic Federation: A neutral star nation that became a member some 3 years ago.

Location: The brightest star in the constellation of Piscus Austrinus (the southern fish). Piscus Austrinus is found between the constellations of Aquarius and Grus.

Distance From Earth: About 23 Light years from Earth.

Life Form Type: Two members. First, a human rebel group from the Pleiades that first colonized Fomalhaut some 250,000 years ago, and who are now found on Fomalhaut's third and fourth planets.

Second, a smaller dinoid-reptoid group from Bellatrix in Orion, that colonized the second planet in this solar system some 200,000 years ago. The two parties created this Confederation after a series of very destructive wars that ended some 20,000 years ago.

Physical Appearance: The first variety of Fomalhaut humans closely resembles the so-called "Nordic" type of ETs, and are usually blonde with very blue, hazel or steel-gray eyes. Men are muscular, and around six feet (1.85 meters) tall. Woman are very buxom and range from 5 feet, six inches to just under six feet (1.68 to 1.83 meters) in height. The second type is darker-skinned and looks almost tanned, with dark hair and brown, gray or black eyes. Same relative height and appearance as the first so-called "Nordic" type.

The Confederation's Dinoid-Reptoid inhabitants are a hybrid originally from the star Bellatrix in Orion.

Very scaly and bony. Upper head is surrounded by large bony crest. Large red or dull yellow eyes (resembling those of Earth's reptiles), are large and set forward just above, and to either side of, very small nose. Mouth has thin lips that run from one side of head to the other.

Ears are non-existent: only sign of them is an extra-smooth 3-inch (7.62 cm) circle on either side of head and just behind eyes. Skin is

scaly like crocodile's and green, yellow, brown or red in color. Small crest of bony material runs up middle of back and is connected to larger crest found on the top of head.

Being is bi-pedal. Thin hand has six long, clawed fingers. Feet have five toes ending in small, very sharp claws. Very small tail, thick like crocodile's, extends only to feet.

Male is shorter than female. Bellatrician-like males on Fomalhaut range from 8 to 10 feet (2.44 to 3 meters) in height: females are 8.5 to 10.25 feet (2.6 to 3.12 meters) tall.

Special Traits and Abilities: Noted for prowess in all scientific endeavors. They now comprise a large part of the personnel of first major Science and Exploration Team sent to Andromeda (some 2 million Light years from our galaxy).

Average Amount of Sleep Needed: 2 to 6 hours daily.

Language: Human language is lyrical but guttural: Dinoid-Reptoid language is much more guttural.

Mother Ship and Other Craft: Human scout ships are ovoid, like water drop about to fall from tap. They range from 60 to 85 feet (18.3 to 26 meters) in diameter. Mother ships look like huge multi-layered cigars and are from 2 miles to 1200 miles (3.2 to 1,920 kilometers) across.

Dinoid-Reptoid scout ships are shaped like huge beetles, approximately 100 feet (30.5 meters) in diameter.

Mother ships are shaped like amoeba and are some 8 to 900 miles (13 to 14,400 kilometers) across.
