Subject: The Galactic Federation. Part 3.May 12, 2011.

This explains the space people on the nearest star to Earth.

Member
Name: The Great Star Union of Centaurus.
Accepted into the Galactic Federation: 1.1 million years ago.

Location: The Constellation of Centaurus is located between the constellations of Lupus and Vela. It is best known for its brightest star, the triple star system of Alpha Centauri (also known as Rigel Kentaurus). One of its triple stars is Proximi Centauri, which, at 4.3 Light Years, is the closest known star to Earth.
Distance From Earth: 4.3 to over 1,000 Light Years.

Life Form Type: A humanoid and a reptoid species.
Physical Appearance: The humanoid Centaurian closely resembles those humans now found on Earth. The male is very muscular and well-proportioned with blonde, brown, black or red hair. The eyes are either slightly Asian in shape, or are rounded, and are brown, black, blue, green or hazel in color. In height, males vary from nearly 6 feet to almost 8 feet (1.8 to 2.4 meters). Their skin color can be either a very dark brown or a slightly tanned white color. The female is also well-proportioned but less muscular, and ranges from 5 feet 5 inches to almost 7 feet (1.65 to 2.1 meters) tall.
The reptoid Centaurian has a very scaly lizard-like and muscular body. Its skin color is in patches of either green and blue, or red and green. The hands are narrower than a human's and contain six digits which end in a razor-sharp, curved claw.
The eyes are rounded and bulging with a reptoid-like vertical slit, and are either bright red or golden in color. There is no tail, but the feet have five long toes ending in the same curved claw. The female, at just under 8 feet (2.4 meters), is slightly taller.

Special Traits and Abilities: Centaurians are known for their abilities as great strategists and Federation Liaison Counselors. They excel at bringing groups of diverse sentient Beings together and at achieving their goals in a most peaceful and harmonious manner.
Average Amount of Sleep Needed: 2 to 4 hours.
Language: Humanoid language is quite guttural like German, but tonal-sounding like Chinese. Reptoid language is extremely guttural and filled with sounds that are difficult for most humans to replicate.

Mother Ship and Other Craft: Centaurians have two types of ships visible in Earth's skies. The first ship is an all-purpose scout. It is bell-shaped, with a large lens-like circular wing attached to its underside. It is about 45 feet (14 meters) in diameter, and nearly 30 feet (9.1 meters) in height. The second is a command ship, shaped like a cigar with a small bulge in its middle, and is approximately 200 feet (over 60 meters) in length.

Name: Star nation of Bellatrix. Former member of League of Orion and this sector's Headquarters for the former Alliance.
Accepted into the Galactic Federation: Three years ago.
Location: One of brightest stars in Constellation of Orion; it is the bright star found just to the right and above Belt of Orion.
Distance From Earth: Some 112.5 Light Years.
Life Form Type: Major species is Dinoid-Reptoid hybrid.
Migrated from Constellation of Sagittarius about 25 million years ago.
Physical Appearance: Very scaly and bony. Upper head is surrounded by large bony crest. Large red or dull yellow eyes (that resemble those of Earth's reptiles) are set forward just above, and to either side of,

very small nose. Mouth has thin lips that run from one side of head to the other. Ears are non-existent: only sign of them is extra-smooth, 3-inch (7.62 cm) circle on either side of head and just behind eyes. Skin is scaly like a crocodile, and green, yellow, brown or red in color. Small bony crest runs up middle of the back and is connected to larger crest found on top of head. Being is bi-pedal. Thin hand has six long, clawed fingers. Feet have five toes ending in small, very sharp, claws. Very small tail, thick like a crocodile's, extends only to the feet. Male is shorter than female. Males range in height from 8 to 10 feet (2.44 to 3 meters): females are 8.5 to 10.25 feet (2.6 to 3.12 meters) tall. Special Traits and Abilities: Noted for great diplomatic and leadership skills. In charge, for past six million years, of all the former Alliance's forces for this sector of the Milky Way Galaxy. Average Amount of Sleep Needed: 5 to 8 hours. Language: Very coarse and guttural; filled with deep growling and hissing noises. Mother Ship and Other Craft: Scout craft look like dew drops and like beetles; they vary from 100 to 400 feet (30.5 to 122 meters) in length. Mother ships range from 1 to 400 miles (1.6 to 640 Kilometers) long and look like large tadpoles.

Name: The Arcturian Confederation.
Accepted into the Galactic Federation: Approximately 3.75 million years ago.
Location: The star Arcturus in the Constellation of Bootes.
Distance From Earth: Approximately 36 Light Years.
Life Form Type: A horse-like sentient Being.
Physical Appearance: Arcturians are a highly sentient mammaloid species that closely resemble a horse. The body is rather tall and slender with a somewhat stylized horses head. The skin ranges in color from a vanilla shade to a very dark brown. Arcturians possess a mane on the back of the neck and head and an extremely thin tail that is only slightly reminiscent of that of a horse. The hands end in 4 fingers that are very long, supple and extremely thin. The arms, legs and body have a very muscular appearance. The Arcturian's eyes are much bigger than those of Earth humans and are either pale blue or dark brown in color. The ears somewhat correspond to those of a horse, but they are smaller and more rounded than those of their earthly counterparts. In size, Arcturian males range in height from 7 feet to almost 8 feet 6 inches (2.31 to 2.64 meters). Females vary from just below 7 feet to about 8 feet 2 inches (2.11 to 2.49 meters) tall. Special Traits and Abilities: In the Galactic Federation, Arcturians are noted for their mastery of time (galactic calendars, etcetera) and their exceptional abilities in science and philosophy. Average Amount of Sleep Needed: Usually 1 to 3 hours daily. Language: Arcturians speak a tonal language that sounds similar to Chinese or Vietnamese. Mother Ship and Other Craft: Arcturian ships range from a diving bell-shaped scout ship that varies from about 40 to 75 feet (12.2 to 22.9 meters) in diameter, to a lens-shaped planetary command mother ship that is over 14 miles (22.5 kilometers) in length.

Member
Name: Andromedan Star Nations.
Accepted into the Galactic Federation: Approximately 3.5 million years ago.
Location: The Constellation of Andromeda.
Distance From Earth: Approximately 150 to over 4,000 Light Years.
Life Form Type: Humanoid.
Physical Appearance: Humanoids similar in appearance to Earth humans. They usually wear the traditional multicolored Galactic Federation jump suits. Andromedans consist of two basic Earth human types: The first is a Caucasian that ranges from a so-called Nordic type (blonde hair, blue eyes, pale skin), to a Mediterranean type (light to dark brown hair, gray to brown eyes, tanned-looking skin). The second is a typical Oriental, with dark hair, dark Asian eyes and a skin color that varies from very pale brown to a dark shade of brown. The eyes of all Andromedans are slightly larger than those of Earth humans. The lips are thin and colored almost a light pink, while the ears are fitted slightly lower on the side of the head and are slightly smaller in size. The hands and the feet are delicate in appearance

with long fingers and toes.

The men vary in height from 5 feet, 7 inches to almost 7 feet (1.7 to 2.12 meters). The women range from 5 feet, 4 inches to almost 6 feet, 4 inches (1.63 to 1.93 meters) high.

Andromedan women are noted for their alluring energies and their quite buxom figures.

Special Traits and Abilities: Andromedans are noted in the Galactic Federation for their mastery of all forms of scientific endeavor.

Average Amount of Sleep Needed: About 2 hours per day.

Language: Andromedans speak a language whose dialects vary from a Spanish- or Italian-like sound, to one that is more tonal and guttural in its intonation.

Mother Ship and Other Craft: Andromedan ships range in shape from their traditional sombrero- shaped scout ships that measure some 50 to 65 feet (15 to 20 meters) across, to lens-shaped small atmospheric command ships that are up to a half mile (805 meters) in length.
