.....

GIZAN (or Gizahn)

The Gizeh People have been referred to by the Pleiadians (http://www.bibliotecapleyades.net/esp_autor_meier.htm Billy M-ier contacts) as well as others. This may have some connection with the strange people and technology allegedly encountered in deep labyrinthine recesses beneath Egypt, who were sometimes reportedly seen by explorers, and who are said to dress like ancient Egyptians. There is allegedly, according to Leading Edge Research, a huge cavern deep beneath Egypt which is inhabited by people with close ties with the U.S. secret government. Some sources indicate that the Giza People may be a controlled society with the reptilians being the dominant power, although there is still much mystery as to what the "Gizeh Empire" is all about.

GRAILS

These are saurian grey type entities which are apparently somewhat taller than the usually-encountered greys yet with extremely thin rail-like torso and limbs yet very strong.

GREENS, THE

Humans of normal size, yet who possess an olive-green skin color. They claim to be from a subterranean or cavernous realms beneath Europe which they refer to as St. Martin's Land.

THE Zeta Reticulans

(See Star Map) This is the group of aliens who abducted (http://www.bibliotecapleyades.net/vida_alien/zetareticuli_incident.htm Betty and Barney Hill in 1958. and these are the ones who have supposedly been doing the majority of the abductions. They are said to have no emotions and little regard for human life. The dim point of light known to us as Zeta Reticuli is actually a binary star system, and its two stars are each very much like our own yellow sun, not visible in the northern hemisphere.

In our (Earth) sky, it is approximately equidistant between the constellation Orion and the Celestial South Pole. The constellation Reticulum is a fairly small collection of faint stars, of which zeta is barely visible to the naked eye even though it is relatively close to us at approximately 40 light years ~ right around the corner in Galactic terms.

They feed off of human and animal vital fluids by rubbing a liquid protein formula on their bodies, which is then absorbed through the skin. Like typical reptiles which shed their skins the waste is excreted back through the skin. The Greys range from 3 to 4 ft. tall on the average, with skin colors ranging from gray-white to grey-brown to gray-green to grey-blue. Aside from feeding off of human and animal proteins and fluids, they also allegedly feed off the life energy, the vital essence or so-l energy of humans as do other reptilian species.

Part 4.
