In a small New England town, members of a support group, which boasts a growing membership of 1,500, gather for a "s-cret" meeting.

"I wanna let you know that you're not alone," the group leader begins.

Twin sisters Audrey and Debbie, who have asked that their last name and hometown be withheld, have also come a long way to share their experiences.

"It was a long, tiresome battle," Audrey said. "It's impacted my life tremendously. I'm still in therapy."

external>aliens.

Many people have wondered: are earthlings living on a speck of dust -- alone in the infinite universe or are there other intelligent life forms out there in

the cosmos?

Nearly half of all Americans and millions more globally believe we're not alone, according to a 2000 ABC poll. While 40 million Americans say they have seen or know someone who has seen an unidentified flying object, or

external, a growing number believe they've actually met aliens.

Abucted by Aliens: Twins Tell Their Story

Audrey and Debbie not only said that aliens exist, but that they've made contact with them. The twins said it started when they were young.

Twin sisters Audrey and Debbie, who have asked that their last name and hometown be withheld, say their first experience with aliens came when they were little girls.

"I was probably about 5 years old or so ... and a bright blue light would come in to the room and the door would open, and there would be like, a foggy kind of misty blue light, just shining through the whole house," Audrey said.

"And these two figures would come in. There would be a tall one, they had black capes, but they were bald and had big eyes." Audrey and her sister call their visitors "The Bald Men," but they're better known in UFO circles as "The Greys," a race of extraterrestrials, categorized by the grayish color of their skin.

The twins'

<http://abcnews.go.com/Video/playerIndex?id6309196>

first encounter with aliens, they say, came during childhood and continued into adulthood. They also believe they've been abducted together on the same spaceship -- only to compare stories afterwards. "We have been together on abductions," Audrey said. "We have been up in crafts and seen our house from above. So we realized they are not from here.

They are very good at mind erasing or whatever you want to call it. They'll leave you with bits and pieces of things you can remember. So we do remember certain things of being there together."

When asked why aliens would continue to abduct them together, the twins had no explanation.

"That's the question I always ask myself," Debbie said. "A lot of times I'll wake up in tears saying, 'Why me? Why me? Why can't this happen to somebody else.'"

Extraterrestrials Can Embody People's Fears so matter what anyone else believes, people like Audrey and Debbie are convinced that what they've witnessed is real.

"I remember one time being on a spaceship and standing there on the spaceship and the floor and the walls disappeared. And I was staring at the Earth," Debbie said.

They said they realize their stories sound too fantastic and, at times, like the stuff of sci-fi blockbusters.

In science fiction, aliens are often anthropomorphic and benign creatures, like "E.T.," "My Favorite Martian," the classic "Star Trek" television series

or the hit movie "Close Encounters of the Third Kind."
