Subject: Montauk. Part 3.
July 6, 2011.

This talks about a ship moving in time.

.....
.....

One of the first things they did was send recruits forward to around 6030 A D. It was always to the same point. Somewhere in an abandoned city where there was a statue of solid gold. When they came back they were asked what they saw. Whether they were expecting to find a different answer from person to person is unknown. They would look into the vortex and make sure the environment would support life before they sent people. They took samples.

Are there potential futures that people could be sent to?

No. Once you make the connection with the future the line becomes fixed to that point.

Can you change the present by sending someone to the past?

Yes. You can also change the present by sending someone into the future. Under certain conditions. The government is using existing time machines to go forward in the Montauk time line.

Are you saying that now the present can't be changed because we have established a time-loop through the future and the past?

Yes. That means whatever everyone is doing between the most extreme past point and the future they will be doing forever.

What is the furthest anyone has traveled in the future?

10,000 AD.

So everything is locked in until 10,000 AD?

Yes. It's a dreamlike reality. No one has picked up a tangible future beyond 2012 AD. There is a very abrupt wall there with nothing on the other side..

Prophecies speak of earth changes around then.

Curious, isn't it?

Can you project yourself two hours into the future and meet yourself?

Yes, but its very dangerous. The person who walked into the tunnel is out of phase with the person who comes out the other end. This did happen. The result is that the person just incinerates.

Did they ever give you a weapon in case you ran into anything negative?

They didn't have to do that. The vortex could be arranged to follow the person, so that they could bring them back in if anything went wrong. They could see them on a viewer.

So they achieved a working time portal. At one point they had a situation where they had a "monster from the ID" type creature come through and everyone went into a panic. They shut the transmitter off. The creature ate people and equipment. They had to go back and shut down the unit in Philadelphia in order to shut off the unit in the future so they could stop this creature in 1983. This was on August 12, 1983. The vortex locked on to the 12 August 1943 test and formed a loop. All this occurred because someone planted the thought in the mind of the operator in the chair to generate this creature. It was an effort to sabotage the project. A lot of people thought the project had gone too far. When I worked for them between 1971 and 1983 I was so tired when I would get home from work. What they would do is that when I my mission was over they would return me to a point milliseconds before I left. It would appear from one perspective that I never left. Of course, after I stopped working there,

all that stopped.

Is there a reason that all these things happened?

If you go back into the Philadelphia experiment end of it, which was the beginning of the whole business, one can see from the way that thing was maneuvered that there was a higher force of some kind involved in setting the whole thing up because it never would have happened the way it did unless two obscure dates 40 years apart coincided between the two experiments: the project known as the Philadelphia experiment, or Project Rainbow, in 1943 and the Montauk project in 1983.

If I may interject something here. There is a point about two thirds of the way down the time tunnel where the person who is going through the tunnel perceives a large "thump". The person's consciousness leaves their body. There is a tendency to see things on a broader basis. I am sure there was some intelligence there. Looking back on my experiences, I'm sure there was some intelligence there. I would have trouble with the recognition of it. What they were trying to do at Montauk was to stabilize the perception process that would occur upon exteriorization from the body. They were trying to manifest that for some reason. We don't know what their purpose was.

What was the role of the aliens in this whole thing, other than the prototype of the mental amplifier chair?

That would be the another part of this that we haven't got into yet.

Let's look at what the Philadelphia experiment got into in a technical sense. It was what started all this happening. It originally began back in the 1930's in Chicago with three people. Dr. John Hutchinson Sr., who was the Dean of the University of C-icago, Nickola Tesla, and Dr. Kurtenaur, who was an Austrian physicist who was on staff at the Unive-sity.

They decided to do something with the speculation regarding the concept of things and people being invisible. This subject had been discussed for several years. They got together and did some research at the University of Ch-cago around 1931 or 1932. In 1933 the Institute of Advanced Studies at Pr-nceton was formed and the project was transferred there in 1934. One of the people on staff at the Institute was Dr. John Erich Von Neumann, who was from Budapest Hungary. He got his degree in chemistry in 1925 and his Ph.D. in mathematics in 1926. He taught in Europe for about four years and transferred to the U-ited States. He taught at the graduate level for three years and was invited to join the Institute.

Other people at the Institute included Albert Einstein, who left Germany in 1930. He went to the California Institute of Te-hnology for three years and taught there and then went to the Institute upon their invitation and acceptance. A lot of other people showed up there as time went on. The project expanded about 1936. In the meantime, Tesla was named director of the project. He was a friend of president Franklin Ro-sevelt, whom Tesla met in 1917 when FDR was secretary of the N-vy. Tesla was asked at that time to do some work for the govern-ent for the w-r effort, which he did. He accepted and became director of the invisibility project until he resigned in 1942. In 1936, after intensive study, they decided to have an initial test of their work. They achieved some partial invisibility. The Na-y and everyone else was encouraged to continue the work, and the Nav- supplied money for research.

Scientists were coming to the Uni-ed States from Germany until 1939, when the -ar with Germany was started.

In 1940, after research using Tesla's approach, they decided they were ready for a full test at the Brooklyn -avy Yard. They had a small ship and a tender ship at each side. One ship provided the power and the other supplied the drive for the coils. They were tendered to the test ship by cables. The idea was that if anything went wrong they could cut the cables or sink the test ship. Everything worked and the project was declared a success.

The important point about the 1940 test is that there was no one on board the test vehicle. It was strictly a dry run with no people. This is important because of what happened later.

Other people came on board. Thomas T. Brown joined the project because of his expertise in electrogravity effects. He had the task of solving the problem of the German magnetic mines that were affecting allied shipping and Na-al efforts. This led into a parallel project which involved the use of

degaussing
coils and cables to explode the mines at a distance from the ship.

The Navy wanted several people to keep an eye on the tests. That is how I got involved. Keeping technical commentaries. Let's look at Nickola Tesla.

In 1879 his father died and his first year at college ended. He came to the United States in 1884. He had enormously intuitive insight. He had a perfect track record. Before coming to the US he had known Robert Oppenheimer, who later worked with the development of the atomic bomb, and Dr. David Hilbert, the mathematician who devised equations for Hilbert Space, which described multiple space or multiple realities mathematically. These equations for multiple space became very important in the project. Dr. von Neumann met Hilbert in 1927 and retained a lot of what he had learned. With that, Von Neumann developed other new systems of mathematics. Von Neumann was considered to be one of the most outstanding mathematicians in this century. Some think he was better than Einstein. Another mathematician involved was Dr. John Levinson, who was born in 1912. He died in 1976. He published three books on mathematics. There is no other history of Levinson himself anywhere that I can find. Levinson developed the so-called Levinson Time Equations, with all this behind them, the group had all they needed to proceed with the project.
