You can view this newsletter online at:

<http://uforeview.tripod.com/conspiracyjournal633.html>

Are you tired of the same-old stories from your local newspaper or the generic "g-vernment approved" TV news? Are you sick of being constantly force-fed inane stories about the private lives of celebrities or what obscene amount of money a popular sports figure makes a month? Well if that's how you feel, then it's time to join thousands of others all over the world (and maybe "worlds") with the number one weekly e-mail newsletter of conspi-acies, UFOs, the paran-rmal, and everything else weird, strange and frightening. YES THAT'S RIGHT! Con-piracy Journal is here once again to cure the sickness of ignorance, disinformation and government cover-ups. So sit back and relax because it's time for Cons-iracy Journal!

This week, Conspir-cy Journal takes a look at such hair-pulling stories as:

- Aliens May Destroy Humanity to Protect Other Civilizations -
  - Former U.K. UFO Project Chief Apologizes For 'Spin And Dirty Tricks' -
  - Reptilian Quest -
  - Spir-ts on the Information Highway -
- AND: Revealed: S-x Hormone Plan to Feminize Hi-ler

All these exciting stories and MORE in this week's issue of CO-SPIRACY JOURNAL!

~ And Now, On With The Show! ~

Aliens May Destroy Humanity to Protect Other Civilizations

Rising greenhouse emissions could tip off aliens that we are a rapidly expanding threat, warns a report

It may not rank as the most compelling reason to curb greenhouse gases, but reducing our emissions might just save humanity from a pre-emptive alien attack, scientists claim.

Watching from afar, extraterrestrial beings might view changes in Earth's atmosphere as symptomatic of a civilization growing out of control - and take drastic action to keep us from becoming a more serious threat, the researchers explain.

This highly speculative scenario is one of several described by a N-sa-affiliated scientist and colleagues at Pen-sylvania State University that, while considered unlikely, they say could play out were humans and alien life to make contact at some point in the future.

Shawn Domagal-Gol-man of Nas-'s Planetary Science Division and his colleagues compiled a list of plausible outcomes that could unfold in the aftermath of a close encounter, to help humanity

"prepare for actual contact".

In their report, Would Contact with Extraterrestrials Benefit or Harm Humanity? A Scenario Analysis, the researchers divide alien contacts into three broad categories: beneficial, neutral or harmful.

Beneficial encounters ranged from the mere detection of extraterrestrial intelligence (ETI), for example through the interception of alien broadcasts, to contact with cooperative organisms that help us advance our knowledge and solve global problems such as hunger, poverty and disease.

Another beneficial outcome the authors entertain sees humanity triumph over a more powerful alien aggressor, or even being saved by a second group of ETs. "In these scenarios, humanity benefits not only from the major moral victory of having defeated a daunting rival, but also from the opportunity to reverse-engineer ETI technology," the authors write.

Other kinds of close encounter may be less rewarding and leave much of human society feeling indifferent towards alien life. The extraterrestrials may be too different from us to communicate with usefully. They might invite humanity to join the "Galactic Club" only for the entry requirements to be too bureaucratic and tedious for humans to bother with. They could even become a nuisance, like the stranded, prawn-like creatures that are kept in a refugee camp in the 2009 South African movie, District 9, the report explains.

The most unappealing outcomes would arise if extraterrestrials caused harm to humanity, even if by accident. While aliens may arrive to eat, enslave or attack us, the report adds that people might also suffer from being physically crushed or by contracting diseases carried by the visitors. In especially unfortunate incidents, humanity could be wiped out when a more advanced civilization accidentally unleashes an unfriendly artificial intelligence, or performs a catastrophic physics experiment that renders a portion of the galaxy uninhabitable.

To bolster humanity's chances of survival, the researchers call for caution in sending signals into space, and in particular warn against broadcasting information about our biological make-up, which could be used to manufacture weapons that target humans. Instead, any contact with ETs should be limited to mathematical discourse "until we have a better idea of the type of ETI we are dealing with."

The authors warn that extraterrestrials may be wary of civilizations that expand very rapidly, as these may be prone to destroy other life as they grow, just as humans have pushed species to extinction on Earth. In the most extreme scenario, aliens might choose to destroy humanity to protect other civilizations.

"A preemptive strike would be particularly likely in the early phases of our expansion because a civilization may become increasingly difficult to destroy as it continues to expand. Humanity may just now be entering the period in which its rapid civilizational expansion could be detected by an ETI because our expansion is changing the composition of the Earth's atmosphere, via greenhouse gas emissions," the report states.

"Green" aliens might object to the environmental damage humans have caused on Earth and wipe us out to save the planet. "These scenarios give us reason to limit our growth and reduce our impact on global ecosystems. It would be particularly important for us to limit our emissions of greenhouse gases, since atmospheric composition can be observed from other planets," the authors write.

Even if we never make contact with extraterrestrials, the report argues that considering the potential scenarios may help to plot the future path of human civilization, avoid collapse and achieve long-term survival.

## Former U.K. UFO Project Chief Apologizes For 'Spin And Dirty Tricks'

By Lee S-eigel

As the British National Archives continues to release UFO-related documents, the former Ministry of Defense (MoD) UFO Project chief is openly admitting to being part of what he claims was a U.K. policy of ridiculing UFO reports and the people who reported them.

The U.K. made public 34 previously-classified files, totaling about 9,000 pages of documents covering the years 1985 to 2007. For three of those years, 1991 to 1994, Nick P-pe was in charge of the official MoD office.

"What's abundantly clear from these files is that, while in public we were desperately pushing the line that this was of no defense interest," Pop- told The Huffington Post. "We couldn't say 'There's something in our air space; pilots see them; they're tracked on radar; sometimes we scramble jets to chase these things, but we can't catch them.' This would be an admission that we'd lost control of our own air space, and such a position would be untenable."

"Every time we got a report from a pilot, we were checking the radar tapes. So it was an interesting sleight of hand. We were telling the public we're not interested, this is all nonsense, but in reality, we were desperately chasing our tails and following this up in great detail," he added.

One file reveals how officials were afraid to be embarrassed if the public learned that UFO research was hindered by a lack of funds and higher priorities.

Another case, from 2007, took place in the vicinity of the Channel Islands and involved a small commercial aircraft.

"The pilot and several of his passengers saw a UFO, which they said was essentially a mile long," -ope recounted. "And several other pilots saw it, but said, 'We're not going to report this.' And here's the great little get-out-of-jail-free-card for the MoD: Just by a matter of maybe a few hundred meters, it turned out that this was in French air space, so MoD was given this little get out to say, 'Well, it happened in French air space, so it's not an issue for us.' Clearly, that was an absolutely outrageous abrogation of responsibility."

A file from 1993 (while P-pe was chief of the UFO Project) describes how European Union fundshad been wasted on a report that included a theory that aliens had established a base in the asteroid belt between Mars and Jupiter.

It turns out that Po-e may have been directly involved with this case.

"I'm a little bit apologetic about this because obviously, when I was in MoD, I had to play this game myself. To really achieve our policy of downplaying the UFO phenomenon, we would use a combination of 'spin and dirty tricks.'

"We used terms like UFO buffs and UFO spotters -- terms that mean these people are nut jobs. In other words, we were implying that this is just a very somewhat quaint hobby that people have as opposed to a serious research interest."

But Po-e said the ridicule policy went much further than that.

"Another trick would be deliberately using phrases like 'little green men.' We were trying to do two things: either to k-ll any media story on the subject, or if a media story ran, insure that it ran in such a way that it would make the subject seem ridiculous and that it would make people who were interested in this seem ridiculous."

Pop- further admits that he may have been the one who drafted actual MoD statements that contributed to the ridicule policy.

"If it was my words, then I apologize, I'm very sorry for that. I believe in open g-vernment and freedom of information. I believe that the UFO phenomenon does raise important defense,

national se-urity and air safety issues, and if I helped ki-1  
any initiative on that, I'm deeply sorry."  
'Part 1.
