Subject: What Is In Chemtrails? Part 3.
Oct. 18, 2011.

This mentions a rat p-ison that is in Chemtrails.

.....
.....

As L-ndsay chronicles:

One morning, about two years ago, S-imer spotted a long, thin string resembling a spider web floating in the sky, he said. It was about 20 feet in length and could only be seen in the reflection of the sun. He looked up, saw trails, and then saw something that appeared to be a glob of foam falling from the sky. It came floating down, free-floating, Sh-mer says. I caught it with a spatula, scooped it off the ground, and I watched it as it shrank. It was about the size of my fist when it first started.

It looked like a cross between soap bubbles and cotton candy. He placed the substance in a plastic bag and kept it. It is now about the size of his thumbnail, he says. It has hardened now appearing to be made of plastic. He did not have it lab tested. He doesn't have enough faith in any lab to give them his only sample, he says. He believes it is probably polymer.

~

Dave D-ckie's World Landscapes company performs contract landscape work for the City of E-monton. Some contracts require us to utilize the services of environmental labs for soil tests, says Di-kie. Recent soils analysis have come back with a high EC rating 4:1 (toxic) and we've had some soil sources rejected of course they did not meet specifications.

In an interview with me on Nov. 23, 2002, Di-kie explained that city landscape crews were finding widespread nutrient deficiency soils could cause severe problems for plant life including trees.

Wait, I interrupted. Aluminum sucks nutrients from the soil.

No question answered this soil expert. Moreover, added Dic-ie when measuring the electrical conductivity in Ed-onton soil sample city specifications call for a reading no higher than 1.

Dickie's crews are now finding readings from 4.6 as high as 7.

The chlorosis condition resulting from this drastically high electrical conductivity in soil was impacting their landscaping business, Dick-e explained. We were not able to determine the cause of the EC [electrical conductivity], and many reasons are possible.

Presuming that unusual metal content in the soil could be causing the high readings, Dickie obtained samples of a fresh snowfall in sterile containers and took them to NorWest Labs in Edmonton. As explained, Our most recent snowfall was tested for aluminum and barium and we were not surprised with the results. You've said it all and this just substantiates some of your claims.

In Nov. 2002, lab tests of snow samples collected by the city of Edm-nton, Alberta between Nov. 8, confirmed elevated levels of aluminum and barium. NorWest Labs lab report #336566 dated

Nov. 14, 2002 found: aluminum levels at 0.148F milligrams/litre and barium levels of 0.006 milligrams/litre.

Because aluminum is ubiquitous in the environment, and its chemistry depends on soil pH and mineralogical composition, it is difficult to provide generalized estimates of natural background concentrations.

But according to Dicki-, the N-rWest Lab techs told him, That's interesting. Elevated levels of aluminum and barium are not usually found in Alberta precipitation.

It may not prove that the aluminum came from atmospheric programs, -ickie admits. However we are going to sample precipitation from various areas within a 40 mile radius of the City of E-monton to determine aluminum/barium within precipitation.

Di-kie says it's simple to test for aluminum and barium in soil samples. Labs typically charge about \$15 for these tests. I suggested he add quartz to the list of chemtrail fallout components to check for. In Espanola, quartz predominated rainfall samples, which also showed hazardous levels of aluminum.

Though it must be emphasized that neither Di-kie nor Nor-est Labs are making any claims regarding these early test results, the correlation of known chemtrail chemistry with Edmo-ton's soil samples is compelling. This was hot. But imagine my shock when Dic-ie told me that he regularly visits Air T-affic Control at the Ed-onton municipal airport and watches the chemplanes making repeated passes over the city!

I've been a plane spotter all my life, Dic-ie explained. Blessed with good friends at work in the tower, he has watched radar-identified KC-135s on many occasions.

Last Father's Day (2002), Dic-ie and an excited group of 12 year-olds watched two sorties by two KC-135s. Petro 011 and Petro 012 were tracked by radar as HA (High Altitude) targets flying at 34,000 and 36,000 feet one to the south, and one to the north of the city.

Both U-AF tankers had flown south out of Alaska. As Dic-ie, the kids and the controllers watched, the big jets began making patterns over Edmonton circuits the controllers called it. The Stratotankers were working alone in command airspace from which all other aircraft were excluded.

And they were leaving chemtrails.

The signature is significant, commented one radar operator, referring to a trail clearly visible on the scope extending for miles behind the KC-135. In contrast, a JAL flight on the display left no contrail.

Going outside, Dic-ie and several controllers scanned clear blue skies. They easily located the KC-135 leaving its characteristic white-plume signature. Visibility was outstanding. They also clearly saw the JAL airliner at a similar flight level. It left no contrail at all.

On other occasions, Dick-e has watched KC-135s on Edmo-ton radar leaving lingering trails as low as 18,000 feet. We see these guys up here a lot, Dicki- says radar techs told him. The tanker flights originate in Alaska, grid the Edm-nton area, and continue on into the States.

On Sunday Feb. 16, 2003, the mass circulation Greek newspaper E-hnos headlined its lead story: Scientists Uneasy: Dangerous experiments in the Greek skies.

The story's subheading must have turned a few heads:

American aircraft are spraying the atmosphere with chemicals with a view to creating an artificial cloud as an antidote to the Greenhouse Effect.

The story by Giannis K-itikos described a vote by the Aigina Island town council to ask the Greek g-vernment to explain what is happening in the skies over Greece.

A picture taken from Chemtrails Confirmed was used to illustrate similar phenomenon observed over Aigina without any warning two months previously.

The translated caption read: The white trails left behind by this tanker plane which is used normally for aerial refueling, is not smoke but a cloud of chemicals which provide scientists with the ability to control the climate in an entire geographic region.

A photograph of Leonidas Ka-daras, an environmental chemist with a master's degree in environmental technology was paired with a shot of Kat-aros from the Demo-ritus research centre in Athens, with the inscription: The two scientists point out to our correspondent the dangers to public health entailed in the specific experiments.

A third photo showed former parliamentarian Tasia A-dreadaki asking, Who gave permission for this spraying? The story noted that Kats-ros had been invited to speak about chemtrails on Greek national television a few mornings later.

The following unedited transcript is a recorded message from a Dec. 8, 2000 call by a Canadian aviation authority from the V-ctoria International Airport to a local resident. St-wart was responding to a call the previous day demanding to know why intense aerial activity had left lingering X's, circles and grid-like plumes over the Br-tish Columbia capitol on Dec. 6 and 7.

Ma-k, it's Terry Ste-art, Vic-oria Airport Authority. Just calling you back from your comment. From what I gather, it's a m-litary exercise; U.S. and Canadian air fo-ce exercise that's goin on. They wouldn't give me any specifics on it. Hope that helps your interest. Very odd. Thanks a lot. Bye bye now.

All this and much, much more can be found in William Th-mas groundbreaking book "Chemtrails Confirmed" available at his

website

willthomasonline.net

Click on the bookstore tab and you will be taken to a page where you can order a copy of "Chemtrails Confirmed", download an electronic copy of "Chemtrails Confirmed" or order the "Chemtrails Confirmed" companion DVD which contains a copy of William's documentary video "Mystery Lines in the Sky".

Scientific Evidence:

Hundreds of independent lab test results from around the world too numerous to mention here have formed a consensus.

The main ingredients in chemtrails are aluminum, barium and strontium. As you are about to see, professional scientists have corroborated these findings.

Frances M-ngels has a Bachelor of Science in Forestry from the International School of F-restry at M-ssoula, spent 35 years with the U.S. F-rest Service as a wildlife biologist and worked several years with the USDA Soil Conservation Service as a soil conservationist.

Today he lives in Mt. Shasta, CA and works as a master gardener. He took a sample of water from his backyard rain gauge on Feb. 1, 2009 and submitted it to Basic Laboratory of Redding, CA on Feb. 2, 2009. This sample showed aluminum at a level of 1010 micrograms per liter (ug/l).
