Subject: The Low Down On Chemtrails.
Jan. 17, 2012.

Here is person who says he worked on producing the chemicals that are in Chemtrails.

.....

I can't say with 100% certainty that the chemicals I worked on ended up in Evergreen planes, but I do know for a fact that cargo airline companies like Evergreen routinely accept large sums of money to load and disperse chemtrails. Much more lucrative than just hauling cargo.

I spent 17 years developing various chemicals for Chemtrails - ask me almost anything.

What is/are their purpose(s)?
How toxic are they?
Do they breakdown or accumulate?
Thanks

Is gold involved?

Purpose(s): Too many to count on ten fingers. It really depends on where they are going to be used. Many are calming agents. Others induce a state of haziness. Rarely, we were asked to develop mixtures to incite anger/rash behavior. 90% of what we worked on aimed to alter emotions/mood/state of mind.

Toxicity: In almost all cases, it was made very clear to us that what we were working on should have minimal toxicity. Naturally, a small percent of the population will have allergic tendencies to a chemical compound. But in some cases we even went as far as animal testing to ensure that the chemicals we were working on were relatively non-toxic. I never worked on a project where the intended result was toxic/fatal.

Breakdown/Accumulate: Varies a lot based on the chemical structure. Some of the mixtures we developed were intended to dissipate to concentrations as low as one part per billion by the time they reached ground level. Others were specifically designed to reach ground level and last for up to a year. Even after rain/wind/snow, etc.

Beyond your company which I will assume is subcontracted anyway, do you have any clue who's behind the spraying?

I am pretty sure that gold never played a major role in any of our chemical mixtures.

If it ever was, it was a secondary ingredient that didn't play a major role in the intended effect.

I know someone other that knew someone related to their half Uncle and that is the

person who oh f-ck... nevermind Horace bubba

Why should I care?

A person of low taste, more interested in himself than in me.

Do you know how wide spread it is?

Are certain areas targeted more than others?

Do you mean which airlines conduct the spraying? Or who coerces the airlines into doing so? I do know that 99% of the time, a commercial pilot is unaware that their plane may be spraying chemtrails. I realized after some time that whatever organization is "behind the scenes" of all this is very good at making sure to directly deal with as few people as possible. I never knew who was contracting my employer's services. Not once.

Others were specifically designed to reach ground level and last for up to a year. Even after rain/wind/snow, etc.

Barium breaks down the immune system by depleting Vit C. Why use barium?

<http://www.godlikeproductions.com/forum1/message1744569/reply28909398/abusive>

So it's a psy-ops in the truest sense?

Do you know how wide spread it is? There are certain areas targeted more than others?

I do know that North America is not the only continent that uses ADCs (aerially dispersed chemicals) without the knowledge of the population. However, I also know that the chemical technology of other countries are close to a decade behind that of the Un-ted States.

I never knew where the chemicals I worked on ended up being used. Like I said before, there is a LOT of s-crecy. I only did it for 17 years because the paycheck and benefits were beautiful. All I can say is that sometimes we were given the job of developing chemical mixtures expecting very specific results, which gave me the sense that they would be used for a specific area.

-State, county, city - I don't know.

I do know that it would be very hard to target an area smaller than a city from the altitude of a commercial airliner. Although I did work on a couple projects where the intent was to develop a mixture that would not disperse very far; just drop as fast as possible without spreading out.

Part 1.
