Subject: This World Will Change. Part 3.
Mar. 10, 2012.

This states that Hawaii is the mountain tops of Lemuria, sometimes called Mu or the motherland.

.....
.....

You remember, dear ones listening to this and reading this, that the Temple of Rejuvenation rested on the top of Lemuria's mountain. Lemuria is the highest mountain on the planet. To this day, it remains the highest mountain, but today it is submerged. It is called Hawaii. The Islands of Hawaii are only the mountaintops of one giant mountain. Measured from the bottom to the top, it is the largest on the planet. There is snow at the top, even now. Can you imagine it 20,000 feet higher? Can you imagine what it looked like observable from space? This is the one that the Pleiadians chose to come to first. Obvious, it was.

Yawee, you might remember, you were always cold. Always cold. For you couldn't have a heater in the temple because then it didn't work! When you saw that which is being done in science today on the screen that my partner brought [a video that Lee showed earlier on macro-entanglement], did you see anything interesting that you might remember?

We speak of temperature. We speak of cold that is so cold that it actually creates less resistance to the flow of energy. This is actually the catalyst for increasing that which is magnetic by 10, 100 times, even 1,000-fold depending on the temperature. Without technical machinery, it was one of the attributes that allowed you to do what you did in that temple.

I want to ask you this. How much do you remember about the physical apparatus that was necessary for this? I ask you these things only of interest to see what your Akash is up to. We have said there was something called the target Human.

Todd: In this moment, the key attribute is a magnetic driver with a particular geometry both above and below the so-called target Human. So there was both magnetics - there was the no-zone point that creates the entanglement and there was the importance of a counter rotation and counter spin.

Very good. Impressive. Now, the big question. So the Human is entangled, is it? With what is the Human quantumly entangled with? Do you remember? Let me ask you this. How many Humans are in the room?

Todd: About 10.

Indeed. And is there a special one?

Todd: The template Human.

Correct! Ah, indeed. Do you remember any other attribute about the template Human that would be noticeable if you saw them? You're not there yet. And that is what we're going to jog in your memory today, if it's all right with you.

Todd: Sure.

I'll get back to you Yawee, but for now I have to go through a process for all of you to understand what is happening. In the process, there is r-velation. I now take you to basic atomic structure. I've done this before, but I've never taken you to this stage. I want you to look at an electron with me, as though you are there and as small as it is. Now go slowly, my partner, for you've had no training in this and it's important that you get the message as presented and don't enhance it [Kryon speaking to Lee]. Physicists say that electrons spin. They don't, and they can't. There's no surface on an electron, since they are energy. They don't spin, but instead have an electronic potential. Every single particle on this planet, everything you can see, all things in this Universe, are created with polarity. This is new information now. All things are created with polarity, and they're designed to be self-balancing. And because of the polarity of what you would call plus and minus, they move and try to balance themselves within a field - all things, both physical and other.

However, all polarities are prone to be biased by what I will call peer pressure. Electrons that carry (or spin with a polarity) of what you would call a certain kind of charge - we'll call it positive - are drawn to those that are negative so that they will null themselves out. They seek each other out to create the null of balance. They seek to be balanced, and if they are not, they are not happy. I use this word only to emphasize the condition of a particle of physics that does not find its balance. Even the unscientific can appreciate this.

But even with atoms, there are not always matched pairs of electrons, since there is no atomic rule that says that electrons will always be created in even numbers. So there will often be what I will call the odd one out and when that happens, the entire atom will then be charged positively or negatively, depending upon the odd one out. When this happens, this atom will seek out another atom, which has an odd one out of an opposite charge. That has a name: Magnetism. I've just explained magnetism. Now, science knows part of that already. What they have not realized yet, however, is that all things have a duality. They suspect it and there are theories that will show it soon enough, and I've given it to you today because it always has existed in someone's mind.

So from the very smallest to the very biggest, even the galaxy has duality. At the center of your galaxy, what you call the black hole, is a quantum push/pull engine, and I'm going to tell you in a minute why it's that way. Here is a big question, and I will answer it right now. Why does everything have a polarity? Why would it be created this way, even down to the electron? The smallest thing, even to what you call the Higgs Bosen [G-d Particle] and the quarks, they all have polarity. There isn't a piece of nature that you're going to find that doesn't have polarity. Why? I will tell you why: Physicists will laugh. Not in ridicule, but in agreement. If it were not this way, the Universe would be a dull, boring place to be. Because, by creating a duality in every single particle, you create an active Universe that is self-balancing and is never at rest. If it were not this way, it would be static, unchanging, and non-creative. Therefore, without polarity, there would be no life. Life is created by having a duality, a polarity in atomic particles. Life is that which is necessary for the Universe to exist. There's no reason for physics without life - and you thought it was the other way around, didn't you? Life was an accident on one planet. Oh, how 3D of you! Life is the DESIGN.

Let's continue the discussion, for it's going someplace. Yawee, you just described the process of creating macro-entanglement in the Temple. What you described was magnetics and null points. Very good! Do you end of understand that magnetics and null points are even at the center of your galaxy?

Todd: Of course.

---attributes yet to be discovered, but that are very real and have to do with instructions to the chemistry of more than three billion parts of the DNA molecule. This is especially true to the gene-producing chemistry of the protein-encoded parts. For simplicity, I tell you that DNA is actively dynamic and can change the reality of everything you think of as "normal." Yawee, you explained very well the attributes of the target creating an entangled state with the template Human. Now we reveal that the template was (1) a woman (2) who is pregnant. You have...

Todd interrupting: ... the source of the perfect DNA template!

That is correct! So the s-cret of the Temple of Reju-enation is twofold: (1) DNA is perfect on Earth within an unborn child and you can transfer some of the attributes of that perfection before it assimilates the energy of the planet. (2) You can extend life and healing through a quantum communication with the DNA molecule. Do you see the implications? The wise, d-vine feminine who is with child is the only one who could be on the template table. Are you starting to understand the beauty of this, the implications of this and where it's going?

There are several things that are going to happen in mainstream science. First, you're going to find some se-rets of DNA and they're going to be embryonic. Start watching scientists discover the embryonic cells and the m-gic within them. You already know that unusual stem cells exist in the placenta. You also know that the pre-programmed adult stem cells are still there in the body. But what about the DNA of the unborn? (Intellectuals, please keep reading, for to stop now will create unrest.) Second, your work today Yawee, will represent "the perfect template" without using what you did in Lemuria. That's why you're the Human who will do this. It's an extension of why you came here, and is perfect for 2012 and beyond.

Part 3.
