Subject: Hippies Expect To Be Picked Up.
April 3, 2012.

Here's some more information about those people who think that the space people will pick them up and take them to another planet. I don't think this will happen.

New ZetaTalk Earth Changes Announcements Signs of the Times

Mysterious Booms Continue for Third Night

March 21, 2012

<http://news.yahoo.com/blogs/abc-blogs/mysterious-booms-trembles-plague-wisconsin>

The mystery is even stumping some of the brightest minds at the University of Wisconsin, who were consulted about whether or not these booms could be related to seismic activity. The city has so far managed to rule out problems with the water and sewer system, elevated gas levels, area blasting or mining, industrial businesses, and even military operations.

Mysterious Sound and Rumble In Montello

March 21, 2012

http://www.nbc15.com/news/headlines/Mysterious_Sound_And_Rumble_In_Montello

Police in Montello are investigating reports of booming sounds similar to what's been reported in Clintonville this week. One person even described it like a really bad train wreck, all the cars slamming into each other at once, right where you're standing.

The towns of Clintonville and Montello are both just to the west of the Prairie du Chien Group dolomite with some sandstone and shale per the Wisconsin Geological Survey. This rock is apparently strong enough to resist being pulled apart, which puts the stress to the west into rock strata that is sandstone. Both Clintonville and Montello are along rivers too, which are weak points in the crust, drooping down because the crust is thin in those places.

Wisconsin Geology

Per the Zetas, it is no surprise that investigators can find no reason for the noise and shaking as the truth about the nearby presence of Planet X is being suppressed. However, the U-GS gave it a try, claiming that Clintonville's nightly banging and shaking were due to a mere magnitude 1.5 earthquake that occurring on the first night. This apparently explains why the noise and vibrations only occur at night, and continue unabated.

Tiny Quake

Clintonville's Booming, now Explained, Continues March 23, 2012

<http://www.jsonline.com/news/wisconsin/clintonvilles-booming-now-explained>

Residents complained of loud booms and shaking houses for the fifth consecutive day, but the calls are dwindling in number as seismic activity declines. The U.S. Geological Survey reported that a 1.5 magnitude earthquake was recorded beneath this Waupaca County city at 12:15 a.m. Tuesday. That likely was the largest disturbance among "a swarm of several small earthquakes" that has been shaking the city all week, geologists said.

Authorities Solve the Mystery of Town's Odd Noises, Shaking

March 23, 2012

<http://www.cnn.com/2012/03/23/us/wisconsin-noises-earthquake/index.html>

The 1.5 tremor is only the second recorded earthquake in Wisconsin since 1947, according to USGS geophysicist Paul Caruso. The rock underneath Wisconsin and in much of the country east of the Rocky Mountains is "very consolidated" and without fault lines. And that means small quakes are actually felt by residents. Some Clintonville residents were even holding "shake" parties at night, waiting for the rumbling.

ZetaTalk Comment 3/24/2012: Stretch zone incidents - where rock pulls apart or snaps, creating booms and vibrations and hums, dropping bridges that lose their moorings or snapping gas and water mains, or creating sinkholes or crevasses - are not considered earthquake incidents. Quakes occur when rock borders slide along each other or push under one another, creating a jolt or a series of jolts. Stretch zone accidents only happen when major plate movement is occurring, and are usually silent so do not get the attention that jolting earthquakes get. A bridge slips off its mooring and is attributed to heavy trucks or poor construction. A sinkhole appears and is attributed to ground water erosion. A building implodes and is attributed to settling, even though the building may have been there for centuries.

With the increase in incidents in stretch zones, and the moaning and humming and booming coming from the ground, the establishment is left in a dilemma. Scientists are chastised and forbidden from mentioning the Earth wobble and presence of Planet X, so how to explain the incidents? Just as NA-A falls silent when Planet X and its Moon Swirls show up on SO-O images, and just as the USG- has recently run from responsibility for earthquake data collection, silence is the only avenue open to them. Wisconsin is in the stretch zone due to the spreading St. Lawrence Seaway. Its landscape gives evidence of this stretch in the past, with numerous lakes along the route from Green Bay to Madison. Clintonville is pulling apart!

Ameritrade Alternative

What's a Stock Market guy to do when the Zetas are advising the public to cash out, buy chickens and goats and seed, and forsake paper money? Since they cannot directly address the ZetaTalk predictions and the obvious Earth changes without running amuck of the cover-up over the presence of Planet X, they must be sneaky. Ameritrade's latest commercial tries to ridicule the Zeta prediction of a pending pole shift by association. Rotation stoppage does not cause things to float off the face of the Earth, nor have the Zetas espoused the December 21, 2012 date as the end of the Mayan Calendar, nor have the Zetas said that time would stop when the pole shift occurs. Yet this is implied.

Mount Safety

If Wall Street is trying to urge you to invest, despite the Pole Shift hype, elsewhere around the world mountain top safety is being considered. In Brazil, the mayor of Sao Francisco de Paula is advertising his town, some 900 meters above sea level.

Brazil Town Mayor Urges to Prepare for the End of the World

March 15, 2012

http://english.ruvr.ru/2012_03_15/68513412=20

Mayor of Sao Francisco de Paula in Brazil has launched a campaign to urge his fellow citizens to prepare for the end of the world, which, according to the Mayan calendar, will happen on December 21, 2012. Decio Colla believes that his town located 900 meters above the sea level may become a safe haven to those afraid of floods and giant tsunamis. The mayor advised citizens to keep enough drinking water and food at home in case a natural catastrophe takes place.

On famous Mount Bugarach in France, the public is not waiting to be invited. They are arriving in droves well ahead of the anticipated December 21, 2012 end of the Mayan Calendar.

Mount Bugarach

Hippies Head for Noah's Ark: Queue Here for Rescue

Aboard Alien Spaceship

March 25, 2012

<http://www.independent.co.uk/news/world/europe/hippies-head-for-noahs-ark>

For decades, there has been a belief that Pic de Bugarach, which, at 1,230 metres, is the highest in the Corbières mountain range, possesses an eery power. Since the 1960s, it has attracted New Ag-ers, who insist that it emits special magnetic waves. Upwards of 100,000 people are thought to be planning a trip to the mountain, 30 miles west of Perpignan, in time for 21 December, and opportunistic entrepreneurs are shamelessly cashing in on the phenomenon.

Per the Zetas, there is nothing special about this location, but due to its elevation it will afford safety during the Pole Shift sloshing and rise in sea level elevation in the Aftertime.

ZetaTalk Comment 9/18/2010: Clearly Mount Bugarach along the border of France and Spain will be well above the waves after the rise in sea level to 675 feet and will survive all pole shift tides. As the highest mount in the area, and within the borders of France, the people of France could seek shelter there and because of the many myths associated with Bugarach undoubtedly will do so. Beyond that, there is nothing special about the spot as a pole shift refuge. Mountain building in Europe is no longer occurring but in the past for one rock layer to be shoved atop another was not uncommon. This often creates caverns and caves.

(JW It has also been reported that on or about April 1, 2012 that the Pope's plane was buzzed by a UFO in Mexico. This may have been an April fools joke but you never can tell. I tried to record the web site saying this but couldn't record it.)
