Don't Let Them Push You Around! Say NO to g-vernment
co-spiracies! Tell the pushy aliens trying to probe your body
with strange instruments to TAKE A HIKE! RESIST domestic
agencies who think that your freedom and privacy are a thing of
the past. FIGHT BACK against the big corporations who make
themselves richer by making the rest of us poorer. QUESTION
p-liticians who say that they know what's best for us and that
any questions are t-easonous. Freedom, and our rights are not
negotiable. And if any of them give you any lip, tell them that
CON-PIRACY JOURNAL is on to their little game. That'll shut
em' up!

This week Cons-iracy Journal brings you such curtain-climbing
stories as:

- Space Weather Expert has Ominous Forecast -
 - Exposing the Ultra-Terrestrial Menace! -
 - Three Mysterious Creatures From Pennsylvania -
- AND: OK To Hunt Bigfoot in Texas

All these exciting stories and MORE in this week's issue of
CONS-IRACY JOURNAL!

~ And Now, On With The Show! ~

THE BOOK THAT ASKS "FRIEND OR FOE"!

E-il Empire of the ETs and the Ultra-Terrestrials

SIX LEADING RESEARCHERS - PROVIDE PROVOCATIVE CLUES
AS TO THE TRUE NATURE OF THE ALIENS/
ULTRA-TERRESTRIALS AND WHAT LIES BEHIND THEIR
SHOCKINGLY BOLD HIDDEN AGENDA

This is the only work that describes in dramatic detail how
these "visitors" have affected the personal lives of those
caught up in the close encounter and abduction web of
treachery and desolation.

FIND OUT. . . WHY THE TRUE NATURE OF THE
ULTRA-TERRESTRIALS IS SO THREATENING AND HIDEOUS
TO BEHOLD. WHAT MAKES THEM SO UTTERLY DECEPTIVE
IN THE EXECUTION OF THEIR DEADLY DEEDS? THE REASONS
THEY WHY THEY NEED TO DO US EXTREME HARM, TO
CONTROL OUR MINDS, SOULS AND BODIES. THEIR ONGOING
PLANS FOR US WHICH INCLUDE R-PE, PILLAGE AND
PLUNDER BOTH OF HUMANS AS WELL AS OF THE ENTIRE
PLANET?

Witnesses tell tales of unbelievable aggression: "The creatures
were hostile and went into attack modes several times, putting
up dense fogs. One time when they stopped, It was like a
backwards tornado coming from the mouth of the leader of the
ships. It was like a ray that he was sending down a funnel. He

did it five times, then he left"

One N-vy Commander with strong C-A ties has stated: "Much if not all of the phenomenon is nefarious. . .a monstrous ev-l with occasional good."

According to Dr. Karla T-rner there is evidence that the intelligence behind the mysterious discs can control what we think we see. They can appear to us in any number of guises and shapes. They can alter our perception of our surrounds. They can take over our consciousness, disable our control of our bodies, install one of their own entities, and use our bodies as vehicles for their own activities.

This shocking book is now available at the special price of only \$-- (plus \$-.00 shipping). Order right now and receive a FREE "VORTEX" DVD!

- THE SUN IS A HARSH MISTRESS DEPARTMENT -

Space Weather Expert has Ominous Forecast

Mike H-pgood, who studies solar events, says the world isn't prepared for a truly damaging storm. And one could happen soon.

A stream of highly charged particles from the sun is headed straight toward Earth, threatening to plunge cities around the world into darkness and bring the global economy screeching to a halt.

This isn't the premise of the latest doomsday thriller. Massive solar storms have happened before - and another one is likely to occur soon, according to Mike Ha-good, a space weather scientist at the Rutherford Appleton Laboratory near Oxford, England.

Much of the planet's electronic equipment, as well as orbiting satellites, have been built to withstand these periodic geomagnetic storms. But the world is still not prepared for a truly damaging solar storm, Hapgood argues in a recent commentary published in the journal Nature.

Hapg-od talked with The Times about the potential effects of such a storm and how the world should prepare for it.

What exactly is a solar storm?

I find that's hard to answer. The term "solar storm" has crept into our usage, but nobody has defined what it means. Whether a "solar storm" is happening on the sun or is referring to the effect on the Earth depends on who's talking.

I prefer "space weather," because it focuses our attention on the phenomena in space that travel from the sun to the Earth.

People often talk about solar flares and solar storms in the same breath. What's the difference?

Solar flares mainly emit X-rays - we also get radio waves from these things, and w-ite light in the brightest of flares. They all travel at the same speed as light, so it takes eight minutes to arrive. There are some effects from flares, such as radio interference from the radio bursts.

But that's a pretty small-be-r thing. The big thing is the

geomagnetic storms [on Earth] that affect the power grid, and that's caused by the coronal mass ejections [from the sun].

Coronal mass ejections are caused when the magnetic field in the sun's atmosphere gets disrupted and then the plasma, the sun's hot ionized gas, erupts and send charged particles into space. Think of it like a hurricane - is it headed toward us or not headed toward us? If we're lucky, it misses us.

How are solar flares and coronal mass ejections related?

There's an association between flares and coronal mass ejections, but it's a relationship we don't quite understand scientifically. Sometimes the CME launches before the flare occurs, and vice versa.

What happens when those particles reach Earth?

There can be a whole range of effects. The classic one everyone quotes is the effect on the power grid. A big geomagnetic storm can essentially put extra electric currents into the grid. If it gets bad enough, you can have a complete failure of the power grid - it happened in Quebec back in 1989. If you've got that, then you've just got to get it back on again. But you could also damage the transformers, which would make it much harder to get the electric power back.

How else could people be affected?

You get big disturbances in the Earth's upper atmosphere - what we call the ionosphere - and that could be very disruptive to things like GPS [the network of global positioning system satellites]. Given the extent we use GPS in everyday life [including for cellphone networks, shipping safety and financial transaction records], that's a big issue.

The storms can also disrupt communications on transoceanic flights. Sometimes when that happens, they will either divert or cancel flights. So that would be the like the disruption we had in Europe from the volcano two years ago, where they had to close down airspace for safety reasons.

What went wrong in the 1989 storm?

In the U.K., there were two damaged transformers that had to be repaired. But no power cuts. The worst thing is what happened in Quebec. In Quebec, the power system went from normal operation to failure in 90 seconds. It affected around 6 million people. The impact was reckoned to be \$2 billion Canadian in 1989 prices.

We had lots of disruption to communications to spacecraft operations. The North A-erican Aerospace Defense Command has big radars tracking everything in space, and as they describe it, they lost 1,600 space objects. They found them again, but for a few days they didn't know where they were.

Is that the biggest geomagnetic storm on record?

We always describe the storm in 1859 as the biggest space weather event. We know there were huge impacts on the telegraph, which suggests there would be similarly severe impacts on modern power grids. It's hard to compare it to the 1989 event because of the changes in our technology.

Many systems have been built to withstand a storm as big as the 1989 event. Is that good enough?

A serious concern would be whole regions losing electrical power for some significant time. Here in the U.K., the official assessment is that we could lose one or two regions where the power might be out for several months.

What would the consequences be?

In the modern world, we use electricity for so many things. We require electrical power to pump water into people's houses and to pump the sewage away. [You can imagine] what could happen if the sewage systems aren't pumping stuff away.

If you don't have power, you can't pump fuel into vehicles. If

you don't have any fuel, traffic could come to a standstill.

Part 1.
