Subject: The Consp----- Journal. Part 5.
May 15, 2012.

This talks about a weird looking creature.

.....
.....

We will never know if early hominids began to see strange, relatively hairless hominids who were more delicate than they, and had big, prominent foreheads. If they did see these beings, perhaps they were seeing Homo sapiens, creeping into the field of hominid perception.

I wrote an article <http://www.ufodigest.com/article/does-earth-herself-create-ufos-ghosts-and-fairies> asking if the planet Earth herself creates UFO occupants, fairies, and ghosts, perhaps in her subconscious or dream state. That theory can be blended in with this one: Gaia creates her various life forms. The dynamic, irresistible process of evolution begins to happen to them, because their creator is a living, breathing entity herself.

As millions of years roll on, these life forms come into new fields of perception which are actually the multiple layers of reality of the planet herself. Or, as a variation: These are the layers of the cosmic onion of quantum perception.

I feel that at least some UFOs and their occupants are the result of Homo sapiens' pending e-olution: The Moment when the human consciousness rolls over to become a new species' consciousness - and has the new species' perceptions.

There had to be The Moment when Grandfather Hominid's mass consciousness became Homo sapiens' mass consciousness. Yes, there were thousands of years after that when earlier forms of humans were still around. However, they were fading away, the force of evol-tion favoring the new human form.

Someone might think, "Well, it is a physical thing, this evolu-ion. Early hominids slowly grew a larger frontal lobe, slowly lost the physical hair, and so forth.

However, what makes us human? What makes a wolf - a wolf? What makes a blue jay - a blue jay? Yes, there are physical characteristics but each species has a "hum" which cannot be completely defined or fully encapsulated by looking at the physical structure of the life-form.

Earlier hominids behaved, felt, and thought slightly differently than Homo sapiens. What it meant to be them was different than what it means to be Homo sapiens.

There will come a day when Homo sapiens starts to fade and the next step in evolu-ion begins to flash in and out of perception, in and out of reality. This new species will be flying along in craft faster than Homo sapiens ever dreamed of, and then just disappear. Familiar?

This is only a theory. I have offered over the months, many theories on the possible origins of UFOs and their occupants. And, true, these theories may blend together and the truth might be combinations of individual theories.

I am fairly positive that human evolut-on has something to do with some of the UFOs we are seeing.

I believe this fact is a good reason not to be constantly afraid of them. What if we not only are beginning to perceive their reality, what if we are actually creating their reality? In a basic way, we are creating the next physical features of the species which comes after us. Are we also creating their

mental, s-iritual, emotional traits?

If our minds are evo-ving into their minds, then are we creating creatures born out of constant f-ar, constant aggression, constant greed, constant w-r, and constant destruction of our own world? Do we create our own perceptions and therefore do we create our own future reality?

Fly on, Future Humans! Be gentle, intelligent, peaceful and just!

Three Mysterious Creatures From Pennsylvania
By Stan G-rdon

Three very interesting encounters with some very unusual creatures have come to my attention recently from Pennsylvania. The Keystone State has a long history of not only observations of Bigfoot, but also of many other mysterious beasts as well. Year after year members of the public reluctantly come forward to report their encounters with strange creatures that aren't supposed to exist. The following is a summary of some of the recent cases that I have been investigating.

November 20, 2011
The Creature of Mud Creek Road
Troy, Pennsylvania

On April 11, 2012, I received a call from the man who, along with his girlfriend, had a frightening encounter with a strange creature on November 20, 2011, outside of Troy in Bradford County, Pennsylvania. The fellow told me that what they saw "scared the h-ll out of us". I was able to interview the woman involved on April 26, 2012. After conducting extensive interviews with the driver and his girlfriend I learned the following details.

At about 11:05 pm that evening, they were driving onto Mud Creek Road traveling west towards Highway 14 near Troy. As they continued down the dark road, their attention was drawn to the left side of the roadway. The man, who was the driver, saw some movement and mentioned it to his friend. The woman initially thought that a n-ked man was crawling on the side of the road. The driver decreased his speed, swerved his truck in the middle of the road and directed the high beams of his headlights towards the subject. The driver stopped about 30-40 feet away. They soon realized that this was not a person, but instead a creature that was crawling very low to the ground. As they watched, the creature moved into a squatting position with its back completely straight, somewhat like the stance of a kangaroo.

The arms of the creature were held tightly to its body. What looked like long claws that resembled the talons of an eagle were easily visible. The claws were estimated to be about 8-10 inches in length. One claw was shorter than the other three. The creature had a muscular body. The head of the beast appeared to be oversized and shaped like that of a wolf. At the top of its head were two pointed bat-like ears that looked to be about 4-6 inches long. The entire creature, according to the man, was covered with "dull wrinkly dark black skin". The man described seeing large canine-like teeth in its mouth.

The eyes of the creature were about the size of a silver dollar and were shiny black. The man stated that even though he had his high beams directed at the creature, the eyes did not reflect at all. The man said he looked over the body during the 12 second encounter, and for some reason thought the creature should have wings, but none were apparent. In the squatted position, the creature seemed to be about five feet tall.

At this point, the creature was in the left lane of the road and about 1-2 feet onto the pavement.

As the couple watched in amazement, the creature began to stretch its body. The man said that at this point the animal

started to stand up on its back legs while also falling over onto its front feet. The driver said that in this position, the creature seemed to be about 6-7 feet tall. The animal then fell over on all four legs. The witnesses observed that the front claws of the creature was now two feet across the center line of the highway, while the back feet remain one-two feet from the edge of the road.

The creature then turns its head to the right and looked towards the vehicle. The driver told me that it looked directly at them, with a horrific expression, "like it was panicked". The fellow saw it take a deep breath. He had the feeling that the creature didn't realize that it was being observed and when it realized it was- it was like it was caught doing something.

Once it realized it was being observed, it leaned back slightly and then reached forward with its claws. The creature then took one tremendous leap and cleared a seven foot embankment and moved out of sight into a wooded area. The man estimated that leap was about 40 feet long. As it was in the process of leaping, it was perfectly straight and held its front claws forward. The legs, as it was leaping, "were only slightly larger than broomsticks or about the size of a walking crane and were very long".
