

4 maneuvers and formations and I knew something about this cause  
I used to live not far from the air force base in Calgary so  
I looked at it and I thought, well that's what it seemed, it  
was one I seen what I seen. Okay, one of the maneuvers - no  
formation, one of the formations was what I'd seen but there  
was many of them, you know, but this one seemed to be separate  
8 from all these other ones on the chart because the other ones  
were shaped like "A"'s and arrows and but this one to me,  
seemed like a perfect formation and then I looked at the  
maneuvers and they were, suddenly I realized that one of the  
12 maneuvers, well they were all kind of like - if you seen  
maneuvers in the sky like that right, you'd probably shoot the  
guy that was ... you know but this one, I suddenly realized I  
seen this 8 years ago. My family and me seen it, another one.

16 Q: Uhm hmm.

A: It was 8 years ago.

Q: And that was where?

20 A: That was in [REDACTED]

Q: Okay, was that one reported?

24 A: No, we just thought it was a joke, you know it was just like  
a star, the maneuver showed in the chart took but what I seen  
- my husband and daughter seen,

Q: Uhm hmm.

28 A: We were looking at the moon. We're real star gazers  
sometimes,

32 Q: Okay.

A: Suddenly this thing came out like this, zig zagging out. It  
came from this side of the moon, from the left side of the  
moon and would zig zag like this and I thought, well then  
36 suddenly it shot that way towards I suppose the north. It  
just schoooo towards north.

Q: And that was the same shape and outline as this object?

40 A: No, this one just looked like a star or brighter than a star.  
It just looked like a real bright object coming out from  
beside the moon. It was just like a, but first I thought well  
it's very odd looking meteorite. It's zigzagging back and  
4 forth in perfect formation.
