N94/165

POSSIBLE METEORITE SIGHTING REPORT

At 2334Z this evening, three aircraft (one at Val D'Or flight level 200 heading north, one at Mirable flight level 200 heading north, and one in the landing pattern at Metagami) reported seeing a bright light overhead followed by an explosion. The aircraft at Metagami also reported seeing pieces falling after the explosion.

The reports were passed to Montreal Centre and Trenton Rescue Coordination Centre. The reports were passed to Canadian NORAD Region, who then advised the National Defence Operations Centre.

Canadian NORAD Region confirmed that no accidents were reported, and that U.S. Space Command and NORAD Headquarters in Cheyenne Mountain had no information regarding the sightings.
