

James R. LID#1

Chas. Meane, -

July 1, 1962.

Dear Mr. Felt, -

Very truly, I shall try to answer

your question, May 9, 1962.

1st As I write with, the is still actively employed by the Canadian Government,

but that the UFO research work ceased some years ago. Right now the monthly receiving from a very serious operation and may not

make the grade as the LID says. 2nd As you know the CIA trade policy with the CIA (use) his country and as

entire the investigation and various information in UFGI. I have been

reference to the CIA and also to a group bracket working with the Government

As to the truth or falsity of these matters I have no worthwhile information, really numbers such as you have mentioned. LID #1

3rd This is no reason to present in

from going for the name a name, the organization who control the UFGI situation -

I simply do not know and can obviously give you the names I have listed above.

4th I do not know what the happened to NIGAP. I know they got merged into

a resistance to continue for an indefinite period as a research center, but State leaders

communication have there for months. Recently I got further and bringing the local agencies

some work, one which the copies had not see, and that's it and when there is activity the

situation with to research they know them and then only shall we be enlightened.

Yours truly,
JHJ

Cleveland 3, Ohio

Dear Mr. Fitch:

By this time you must have seen or
since I am in a very poor condition
a my busy - well I look pretty good for such
by retirement has some work in some
time of my life.

Now I am very interested in your
ions.

(1) I was hoping to mention a general note
about U.F.O.'s they were unknown to me while
in his service.

(2) I am certain that they are either rockets
space ships, certainly not from this Earth
and I believe the occupants of these ships
large enough to carry a crew are pretty much
like ourselves. Much of the jiggery thinking about
their weird appearance is undoubtedly caused
by our concepts of what our own satellites
have for an atmosphere and temperature
conditions. Even our scientists are very
short on the subject of their own satellites.

on our planet. I don't remember the exact date
yet, in fact as we know and all instruments here
must be respect otherwise why all the thought, time
and money having spent on space research and
exploration? Only a few years ago the scientists see
all the answers. - Don't you ever see you sure
but just as positive that they can give you the right
answer anytime you ask.

(3) About controlled observation discs I have heard
they were first noted in WWII over Germany by our
bombers. They were thought to be German missiles
at first and were called by our people "Foo fighters". Later
we found from German prisoners that they thought the
Allies had been detecting new and fantastic weapons in
air. They were seen by some of our planes in the Pacific
and also noted during the Korean War. Generally
the Air Force does not admit this since the
Navy personnel in New Mexico have reported
reported them near rocket crashes their own
when followed a rocket in flight as it was
could be. I have never seen one myself and what
I have just written is a nice article I have read and
I do not remember the name of the person who
your description is could very well have seen
one of these observation discs.

(4) There were press accounts of the radar
sightings by radar operators at the Washington
Airport, but they were quickly checked up by

RAAdm. Herbert B. Knowles, U.S.N. (Ret.)
Goodwin Road - R.F.D. #1
Eliot, Maine

The Air Force and the thing sighted became officially "laser aberrations causing false images - temperature inversion effects, ghost images and spots before the eyes." Keyholes knows about the piece I told you about. He has used everything he has to convince members of Congress of the reality of U.F.O.'s but always the Air Force somehow manages to put the quietus on his attempts. As for convincing people in general, a picture and descriptive matter would be scoffed at by the vast majority of people as faked and therefore to be laughed at. People will not believe unless the Government comes out with the truth.

(5) The cross section was about like this

In conclusion I do not know the real reason the Air Force is concealing the truth about U.F.O.'s. Perhaps therefore a panic would result if people knew visitors from outer space were looking us over. I remember what happened some years back when the radio pub on a play over the air about an invasion from Mars. Perhaps they are not prepared to admit that there are minds elsewhere in the universe capable of devising far more effective means of travel than our best minds have been able to do. I haven't been too many years since the general concept was that God put upon the earth the only thinking creatures (man) in the universe; it may come as quite a shock to many to have to admit that better minds exist elsewhere. Of one thing I am certain - they are it. If investigating U.F.O. reports would disclose any and kind of explanation except the right ones, and that will continue until God at the highest level issues a "cease and desist" to them. With me that he? I really I don't have the foggiest idea. Pardon my laxity in answering.

Sincerely yours,

H. B. Knowles

27 Aug 1961

Mr. C. W. Fitch
6526 Carnegie Ave.,
Cleveland 3, Ohio.

Dear Mr. Fitch: -

I am constantly amazed at the widely distributed people who contact me on UFO's, and delighted, too, for it shows the wide spread interest of many people in this matter. You I have had a piece of a small disc in my hands. It was shown to me by Mr. Wilbur Smith of 10 Kotta St, City View, Ontario, Canada. At that time (1952) Mr. Smith was heading the Flying Saucer research of the Canadian Gov't, and working in very close cooperation with our authorities in Washington, D.C. He is still very much interested in this matter and does independent

research. The Canadian Gov't has officially abandoned the project.

To the best of my recollection the object was shot down by a plane and seen to fall in the yard of a farmer across the river in Virginia. Upon searching the area several pieces were found, one of which was turned over to Mr. Smith for independent research. In one of his trips down to see me he brought the piece along for my inspection.

It was a slunk of unrefined metal in structure, brownish in color when broken with a curved edge indicating the whole thing to have been not over 2' in diam. The edge was rounded in cross section, perhaps a quarter inch thick and obviously swelled to a considerably greater thickness at the center. The outer surface was smooth but not polished and at the broken sections there were obviously iron particles and even evidence of iron rust. I would say that the weight was somewhat lighter than if of solid iron, but it was not "sternch light"

RAdm. Herbert B. Knowles, U.S.N. (Ret.)
Goodwin Road - R.F.D. #1
Eliot, Maine

Mr. Smith told me that a chemical test had been made of the piece at hand, that iron had been found in it, but little if anything else could be identified. To the best of my knowledge this was a piece of one of the U.F.O.'s remotely controlled observation discs. Such discs have been seen many times, most often in the vicinity of defense installations.

We should not scoff at the idea of an observation disc operated by distant control from a U.F.O., for we have done the same thing, rather crudely as yet, but we are bettering our methods and techniques. We have crystal structures under experimental development which may enable us to use a single small, innocuous looking structure to take the place of the whole inwards of a radio or television set. Perhaps this disc had such an affair inside which was lost when the disc broke up. I do not know.

If any operating mechanism having been found, the Air Force retained parts of the broken disc. What their findings were I have no way of knowing since these findings are bound up in official Air Force secrecy. Mr. Smith can possibly give you more precise information than can I. I am sure he would welcome a letter from you and you may use my name if you wish.

As an intriguing side light on this affair I have read somewhere from writings by so-called "contactees" that these remotely controlled discs can be exploded from a distance and the mechanism inside retrieved by the controlling vehicle. This does not seem too improbable to me when we remember what we ourselves are doing and planning to do.

I am sorry I cannot give you more details of this matter. Perhaps someday the Air Force may abandon its secrecy program and give to us the truth of what they have found.

May your interest in U.F.O.'s be rewarded with more concrete information than I can supply.

Sincerely yours,
H.B. Knowles
