

### THERE IS LIFE ON MARS

Based on my analysis of recent images coming from Mars, and intellig information there is strong evidence that intelligent life once existed and may continue. As a former Air Force Intelligence officer my analysis based on my interpretation of the evidence. Scientists often state whether water there is life? I feel where there is Martian water, heat and geom structures there is life. University of Arizona scientists announced that taken by the Mars Global Surveyor (MGS) show evidence of recent cat floods. A team of researchers studying photographs of Mars has found features that they say were sculpted by flowing water within the last t million years ago. Infrared and gamma ray images indicate there are reservoirs of water, just below the surface of Mars. My photographic analysis indicates that all over the planet there are what appears as ancient structures and anomalies such as forts, faces, pyramids, walls, and tunnels. The anomalies are not natural geological formations, but in my opinion represent ancient cities or religious centers. We could ignore one or two anomalies there are hundreds. We can speculate, that the Martian climate was r catastrophic changes, the atmosphere was rapidly deteriorating possibly meteorite bombardment or changes in the sun. These atmospheric changes probably caused the Martians to seek shelter underground and possibly their Moon Phobos to preserve their civilization. They may have left behind pyramids on the surface as a signal to others who would eventually Mars. The Germans in World War II due to allied bombing also rapidly underground and developed manufacturing and living quarters in a short time. Virtually all ME-262 aircraft were manufactured underground.

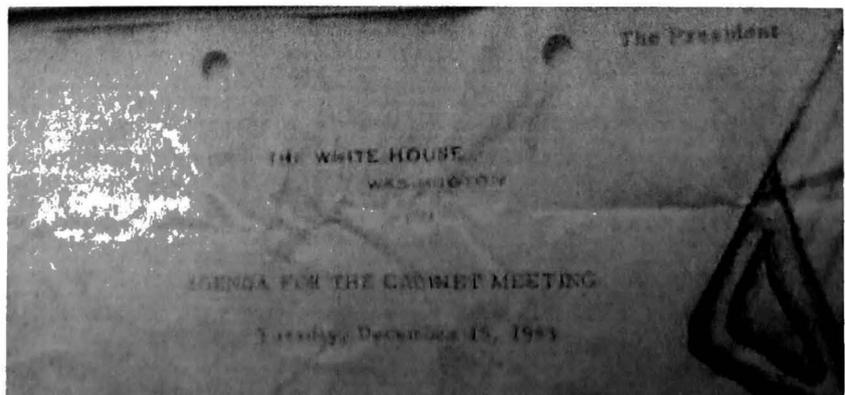

While in college I met President Eisenhower and was told that the Moon Phobos was most likely an artificial satellite launched long ago by an ancient Martian race. Jeff Rense has an article that confirms this speculation. Fred Singer, special advisor to President Eisenhower on Space Development, has published his opinion backed a claim first made by the Soviet astrophysicist S. Shklovsky. The Russian scientist's announcement that Phobos was an artificial satellite proved the existence of a Martian civilization, setting off arguments among astronomers. Shklovsky based his decision on a lot of Phobos' peculiar orbit, which other astronomers also questioned. Shklovsky is also famous for having written a 1966 book with Carl Sagan on SETI. The book states, "We now come to discuss our enigmatic planetary neighbor which seems to provide the best opportunity, in the immediate future,

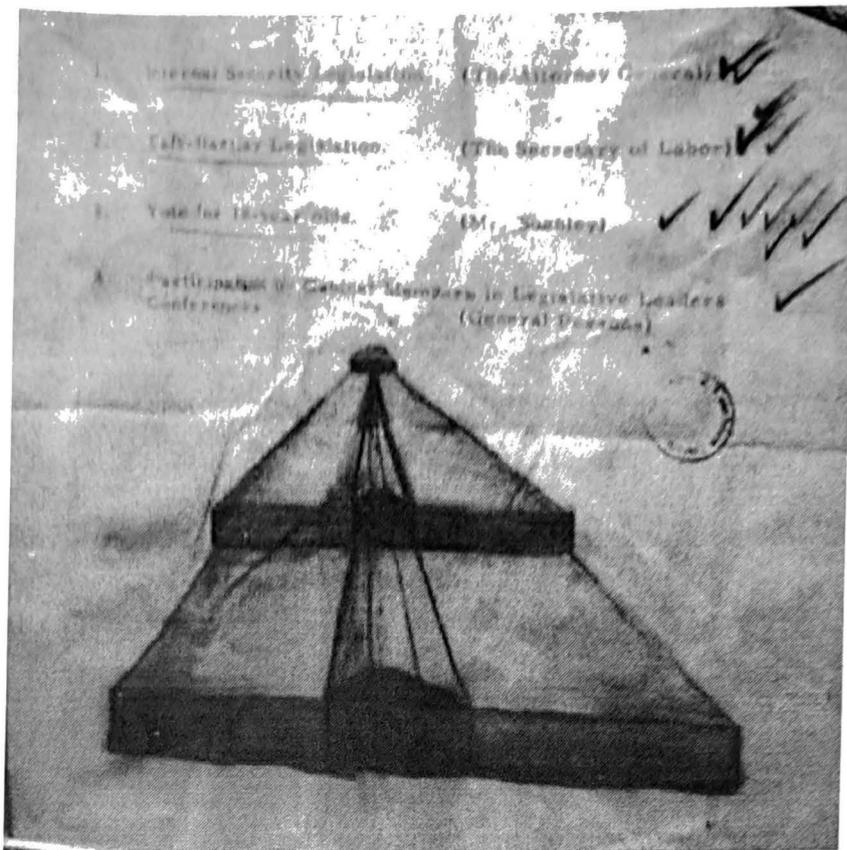

study of extraterrestrial life. In this chapter we will discuss the physical environment of Mars and the possibility that life could have come into the ancient Martian past and survived until the present day" "Intelligence the Universe." page 259.

Dr. Singer backed the Shklovsky's calculations and said, Phobos would be an ideal space base, both for Martians and earthlings. In July of 1988, they launched two unmanned satellite probes named Phobos 1 and 2 heading for landing on the planet's mysterious moon, Phobos. I watched closely when the first one failed in route, but the second successfully took up orbit around Mars in January 1989. Significantly, its infrared cameras picked up underground heat emissions and numerous other anomalies on Mars. A Phobos picture released on Canadian TV, presents an infrared scan radiometer image of the Martian surface that showed clearly defined rectangular areas. These are interconnected with a latticework of perfectly straight channels, that resemble city blocks. The heat signature of what may be a set of underground channels are just too geometrically regular to be formed naturally. According to Dr. John Becklake of the British Museum, "The city-like patterns are kilometers wide and could be easily be mistaken for an aerial view of Los Angeles." The infrared geometric patterns clearly indicate Martian intelligent life. On March 28, 1989, Phobos 2 then headed for the moon Phobos, its cameras picked up an Unidentified Flying Object. The Phobos satellite was the UFO came closer. The last photos may be seen at [www.filersfiles.com](http://www.filersfiles.com)

President Eisenhower was apparently excited about the possibility of life in space and often made doodling of strange craft on his White House papers. When I visited the President's Museum in Abilene, I took a photo of some doodling showing what appears to be a typical Flying Triangle. Eisenhower's Science Advisor Dr. James Killian, gave a briefing on March 14, 1958 - "claiming Mars is much more exciting than thought and conditions more favorable to earth are there. -- Undoubtedly some form of life, although probably not ones which we would recognize." In 1963, Raymond H. Wilson Jr., Chief of Applied Mathematics at NASA, joined Shklovsky and Dr. Singer in their conclusions. He stated that "Phobos might be a colossal base orbiting Mars. New studies this year indicate subsurface reservoirs exist. The heat energy provided by geothermal activity would be good news for biologists who search for possible life on Mars. The shapes of some of reservoirs indicate they are made by intelligent life forms. I must admit that my analysis is not strictly scientific, but includes intelligence data gained from retired Soviet Air Force Colonel Marina Popovich, who told us that Phobos, on one of two Martian moons, is an artificial structure.
