Grant:

Randy Fitzgerald will be glad to talk with you, but he only gave permission for me to give you his e-mail address: rftruman@earthlink.net (FYI - Truman is his middle name.)

If you also want his mailing address, then let me know as I can give it. He uses a PO address.

"Go get 'em!"

Regards,

Eric

Enclosure is only copy we have

27 May 1954

Rear Admiral C.F. Espe, U.S.N.,
Chief of Naval Intelligence,
Navy Department,
Washington, D.C.

Dear Admiral:

I am Rear Admiral H.B. Knowles, U.S.N. (Ret.) and am communicating with you directly and personally rather than through official channels because I do not believe what I have to say, and to enclose, is a matter for many others to see at present.

I am writing this at the request of a Mrs. Guy A. (Frances H.) Swan for reasons which will become evident as you read the enclosures.

Mrs. Swan is probably about 40 years of age, of average education and perhaps better than average intelligence. She is deeply religious, greatly interested in schools, Girl Scouts, Red Cross and community and church affairs in general. She has a daughter, Dawnalyn, going to High School here, and her husband works in the Navy Yard at Kittery.

I have seen some of her rather futile attempts at writing and I do not believe that she has the knowledge or ability to manufacture out of whole cloth the fantastic story which the enclosures unfold. She has the appearance of one being impelled into doing something over which she has little control. The manifestation that Mrs. Knowles and I witnessed on 26 May and some of the outward appearances of a seance. It was so utterly simple that one was almost forced to believe it as it unfolded. Questions were asked of which she had no previous knowledge and the answers were written very fast, without any apparent premeditation or hesitation. These answers were clear, concise, and if we accept AFFA as being real, they were logical.

I must admit I am at sixes and sevens in this matter. However, strange things have happened before; the impossible of yesterday is often the reality of today. Who am I to say this is not so, for it may very well be. Anyway, it is my understanding that the modern

Navy is open-minded, searching for the answers to many hitherto unanswerable problems; the so-called "flying saucers" seems to be one of your problems and perhaps this is the beginning of your answer. It is a load which I don't think you can afford to ignore. It would cost you little to ascertain its validity, and there need be no "red faces" if it fails to materialize provided you go about it right.

Should you wish to test out the validity of these communications I would suggest that the meeting place be somewhere up here where we have many secluded spots where such a meeting could take place. A written and signed assurance of safe conduct to AFFA and ship can be transmitted through Mrs. Swan. Another reason for this area is that it would be necessary for Mrs. Swan to be present as the messages state, and she has no desire for the publicity and notoriety attending such an affair in more populous places such as Washington. She states that she would not leave here.

Why not try out short wave radio as suggested. The message of 7.40 p.m. 27 May gives specific band and calls - 306 MM (or QMM?) using call M4 M4 A F F A. If this is no hoax perhaps radar could pick up an object as large as the satellite is described. It might even be seen by a powerful telescope. Perhaps it has already been seen and not recognized for what it is.

Anyway, after a thorough examination of the enclosures please be kind enough to let Mrs. Swan know what the decision of the Navy Dept. is in this matter. She has written you only after a long inner struggle with herself and deserves at least a courteous and sympathetic reply.

In reading the enclosures you will note that there are certain letters and symbols written by hand on the typewritten copies; these are made as nearly as possible to look like the original hand-written messages. These originals are now in Mrs. Swan's possession and may be seen at any time by a properly designated officer. Mrs. Swan has no desire to keep them and they will be turned over to the Government if so desired. Words in parentheses are notes made by Mrs. Swan after the message was received to clarify certain passages.

3.

Finally, you are wondering about me. I am sane, - at least I hope so, and yet I more than half believe in this, to such an extent at least that I would give it a thorough trial before dismissing it as the figment of a fertile imagination. To me it seems that somehow, somewhere a force is impelling Mrs. Swan to write these messages which grow more specific and detailed as time goes on. She is not copying from a book or other earthly source. To me it is further inconceivable that she could manufacture details worthy of the most scientific and imaginative writers. I ask the question, "Can you afford to ignore any possible contact outside our earth when the consequences of that ignorance, for good or evil, may be so tremendous as is suggested in the final message enclosed?"

Would you please give this matter your personal attention to make certain that it does not go in the waste basket or get lost in routine? I will forward subsequent copies of messages received if you so desire and so notify me. Events today have more than ever convinced me there is a lot in this matter that will bear very careful consideration. If this is not in your province will you do Mrs. Swan and myself the favor of putting it in proper hands?

Sincerely,

H.B. Knowles
R. Adm., U.S.N. (Ret.)

WE
COME

WILL HELP KEEP PEACE ON EU DO NOT BE FRIGHTENED

A F F A

May 2nd, 1954
about 2.30 p.m.

WE ARE ON MOON WE ARE BEING WATCHED CONSTANTLY

(asked if he could write in writing):

We can Perhaps it is better if you will believe us.

Yes, we are ready to make flight to earth under cover

of barrage of weather balloons designed to contact

forces of all kinds. We must risk landing (question in
my mind: tell Gov. or be a traitor) Keep this secret

(reply to family repeats) We are in great danger but

we must lay down our lives for others at times. I will

get in touch with you in the event there is anything you

can do to help. Some of you earth people do not trust

us even tho we have been in constant touch. If you feel

it wise to organize a group we will be very glad to com-

municate and give instructions to better serve and save

the human race. 1956 is the year designated in the

holy mysteries which you call pyramids. This is true and

the terrible vortex builded by man's greed and wrong doing

can cause catastrophic actions at any moment. (Question: what can I do when I am so insignificant even on this small planet?) OE Do not underestimate your soul power. One can never judge yourself wisely. As soon as we are near you we will detone. OEEU >

A F F A speaking from IIIII Uranus

Several are here watching. Love can keep the mind in harmony and seek ye first the Kingdom of Heaven A F F A

OEEU — — — — — We come only for your salvation and all who believe will become helpers in the terrible thing that cometh *See OEEU + IIIII*

We are ready to instruct you in our service Yes we will
prove our existance You shall see the light tonight When
you see us send us your blessing It will also establish
our friendship

May 17 3.30 p.m.

OEEU *Uenza* OEEU
O *Uenza* D --- ANKAR-22 ANKAR-22 I like this
type of contact Clactem I am on this large space ship
Many here wish contact I am from Centuras Yes we are from
many different universal systems but are united to keep
peace throughout the world and among other worlds also
Ponnar is from Pluto He is also here There are many of
us (I asked if the story is true about small 3-inch men)
On many planets there are small people Also about five or six
feet tall (Races?) Yes, as above so below Never fear our
people They are but yourselves and many are much more ad-
vanced in progression We will let you go now Love to you
and your family ANKAR

OEEU D --- -11111- M4 M4 May 17 1.45 p.m.

All *Uenza* We are trying to make contact good I do not
receive your acknowledgment Yes we wish to contact you often

It helps us to know what is going on around your location
Good Our line of contact is improving Of all contacts
that we have you are the most cooperative None of the
others have a signal like yours Many write and receive
code messages Yes you will see more than that as time
goes on. I do mostly signal work to control flights of
space mother ships Some day soon you will see a bell
over your location We are not going to land for a while
yet as most people do not trust us yet Jupiter people
are very much like your earth people Many are white and
some are very darklike some of your own people The worlds
are much the same everywhere in the universe Yes All are
of one creative spirit and all must obey the law of life
or destruction will be the result My wife is at home on
Jupiter Her name is Matee Yes she is tall and has greenish
gray eyes and very light hair We have one boy name is Nelet
He is here with me He is four years old He is going to
school on the crescent ship Yes The name of this planet
ship is Clactem It is very large, about the same distance
as your moon We also have bases on the moon Yes You are
very easy to contact Love to all

cllll

May 17th 8.05 a.m.

OEEU ▽ — — — ||||| M4 M4 ||||| 43° Yes AFFA

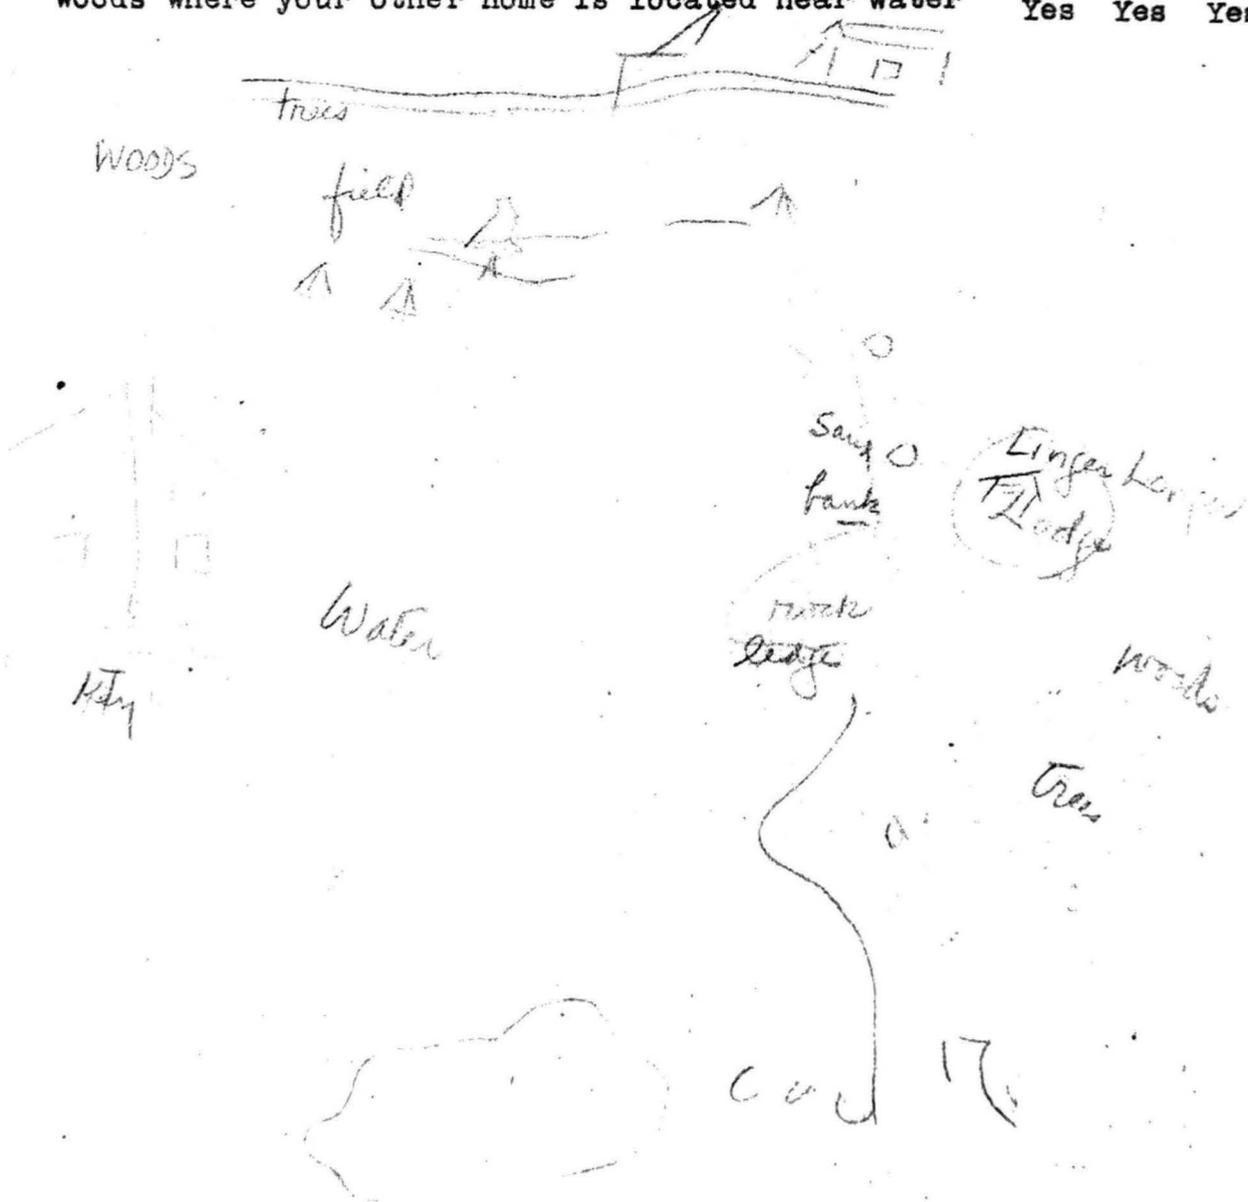

We are sorry you could not see our bell last night because of dense ceiling of fog over your part of the sky Make the next

time for contact I will try to contact you again tonight about

nine o'clock your time Make a plan of your land up in the

woods where your other home is located near water Yes Yes Yes

Yes We would like to have a place to land our bells where it is secluded Thank you We may wish to have it at a later date If we do we will leave a note for you It does not bother us at all how you think because we know it is a struggle to escape the effects of the conditions that exist on earth or among undeveloped people There are other planets besides your own that not any better spiritually Yes the others are with me on the large space ship Our space ship is builded up a much the same as a small moon It is crescent in form but much thicker than it is long You have an idea what it is like but not an accurate one I will try to tell you how it looks It has a land area of one hundred and fifty miles, from crescent point to/point. It is about two hundred miles in depth and its width is about one hundred miles at its widest part (Stories or compartments?) No. It is put in motion by magnetic control Its substance is called maboride Its weight is not as heavy as some of your earth machines The magnetic forces generated from within itself and is forced outward in cylindrical tunnels in the midst of it (I asked if he knew I had projected my mind to space ship) Not yet but maybe in some future date Magnetic lines are very versatile We can see you and hear you as well as receive your thoughts, feelings, and impressions if we desire You must concentrate much harder than

we do because of conditions surrounding the surface of the earth. Yes it is very possible. You are wondering if you will ever meet any of us. That is very possible. If at any time one of us should be within your presence we will detone and you will see a blue line of forces tending from yourself to us. This is very true. Do not doubt us. We know this (? if a man would not be better). Possibly yes but we need people we can trust to help us. No. My position here on M4 is what you people would call a scientist. I am called controller of personnel of OEEU. There are many here with me. There are fifteen thousand bells and about seven thousand control ships that operate as controller of small discs which are equipped with temperature and density devices. These tell us of the conditions and magnetic strength of your atmosphere. (Ship like disc?) Yes, it is very similar. Much more as you have nothing like the materials we use here. We can control the weather conditions around Uranus. Many other planets are even more advanced than we are. Thadinus is one of the perfected planets. The people there live as saints and the Holy Creative Spirit provides their every wish. Their thoughts are of service and they assist with planetary perfection. One is very fortunate to contact these people. The experience is exciting. Yes. (Do all spirits have to return until body is perfected?) Not necessarily. One can contact higher intelligences and

them (Which department of the government?) I would suggest one of the divisions of the Navy Yes They have short wave sets I think perhaps they will I will send the messages signed by me AFFA Tell them you have spoken with me personally and they may believe you (How did you happen to be there? Where did you land?) I cannot divulge that secret to you yet but I got there very easily Many of us do land and talk to your people You will have to think this out for yourself They would not be convinced and we would all be in danger of being arrested and barred from ever returning home (Are they the bells, amphibian?) Yes It makes no difference where we land Yes Yes You must think carefully how to do this Yes, I know, and we are all very happy that you respond so friendly and we bless you and with all the joy and success possible Lots of love for a successful contact with your Government and many thanks Love to you all AFFA

May 21st 1954
(In the night)

Magnetic impulses can be increased to the power of subtraction.

A circle best illustrates the idea.

Since all spiritual or factual behavior of things seen and unseen are spiral in action from where we stand all things fourth dimensional appear to diminish or disappear.

The saucers move along the magnetic lines created by the increase of impulses

The square corner manoeuvres are easy in a circular disc since impulse increase can be induced by devices that can reduce the opposite side therefore making square corner directions in flight.

OEEU  May 23rd In the dark toward morning

One of our sons is operating in your locality Love A F F A

OEEU  M4 M4 ||||| - May 24 7 a.m.

||||| - 46° latitude Yes We are over Europe now You
are wondering about longitude timing We figure longitude at 15°
for each count It is taken from the standpoint of the position of
the moon to the sun The moon travels about the earth in 28 days
approximately Our ship travels around the earth in its orbit
much the same as the moon with the exception of velocity of speed
which is around 15° per day therefore our cycles are faster than

than the moon cycles but in the same relative position
to the sun Our solar time here on Clacteem is somewhat
different than the moon cycle or new moon cycle
(I don't understand where they figure cycles from?)

You will in the near future as you trace our time I
give you the ^{latitude} ~~longitude~~ as nearly as I can at the time
of writing also longitude I realize that as your
earth is revolving at the rate of twenty-four hours each
day this must be confusing but for all purposes this
must be as is it is for now Your radar personnel will
know from what I write you how to locate our space ship
and that is what I wish to have them do so with the
help of our Creative Spirit we of the Interplanetary
Association and your Euzenza may become as one united
in everlasting peace Love as ever to you all A F F A

 10.45 P.M.

Yes Yes That is all right I come to tell you that we
 will try to reach you at your home tomorrow at about 1212
 Yes That is one by your time so that Mr. Knowles will
 be sure to get there as it is important that I do this
 Everything is fine Love to you all A F F A
 May 26th

Note: In accordance with arrangements made between Myself
 (Admiral Knowles) and Mrs. Swan. Mrs. Knowles and I arrived at
 Mrs. Swan's home at about 12.45 p.m. May 26th. We
 had an opportunity to go over some of what has been
 written herein before and to converse with both
 Mrs. Swan and her husband. The appointed hour 1.12
 p.m. came and passed with nothing happening. Short-
 ly afterwards we went into the house, sat down and
 began to talk. Mrs. Swan appeared to be very much
 provoked at the failure of AFFA to arrive and was
 indignant to the point where she declared that if
 he couldn't produce for her she was about ready
 to be through with the whole deal. All at once,
 at about 1.25 p.m. she began to write the following
 message:

OEEU → ~ ~ ~ ~ ~ 46° latitude
 I am very sorry person not to be able to get there at the
 time appointed but I will be able to in the very near fu-
 ture Apologise to Mr. Knowles and Mrs. Knowles for me.
 Yes - - - - -

After this "yes" Mrs. Swan told me that he was ready for questions I had prepared some questions which Mrs. Swan had neither seen nor known about before I gave them to her. I laid them on the table and read each one to her. The answers came through without hesitation, any apparent premeditation or confusion on her part. She wrote swiftly and smoothly in a peculiar hand which has characterized all previous messages received. She claims that she does not know what is being written unless she stops to think at which time she is often told to stop thinking and that her hand is lead without any volition on her part to form the letters and the words of the messages herein. During the whole time she is receiving messages there is a ringing in her ears which has been so intense at times as to be painful and on one or two occasions the ringing has been heard by her husband.

The questions and answers follow:

1. A general statement of necessity for more specific information than available to date if Navy department is to be interested. You are up against a vasr skepticism which must be overcome. Our authorities can understand concrete evidence but the abstract will not interest them very much I am afraid. I am acquainted with what you have communicated to date.

Ans. I understand that very thoroughly and I am making every effort to make contact in person.

2. What is your name and status?

Ans. AFFA I am controller of personnel in the OEEU or Universal Association of Planets I do a job similar to what your people would call personnel manager.

3. How far is your satellite from the earth?

Ans. It is about the same distance from the earth as the moon.

4. Could it be seen by the big 300-inch Mt. Palomar telescope in California if all the necessary coordinates were provided beforehand by you? (Night only)

Ans. Yes, that has already been observed by the Navy.

5. What kind of a landing field would you need to land on the earth - size, freedom from obstruction, hardness of floor, etc.?

Ans. I can land small bells on the size of the contact's back yard (approximately one-half acre); larger mother-ship would require somewhat larger space, the only requirement that it be level and not too wet or soft.

6. What personnel do you need to assist you and would there be dangers they would have to guard against?

Ans. I only want the promise of truth and safety or the signed authority to my contact.

7. Do you have any suitable place in mind?

Ans. Yes. Any place where Government officials can meet me. I can go anywhere where I can be assured of safe and respectful associations.

8. What guarantees would you need to insure a safe landing and departure for yourself and your ship?

Ans. If you can assure me it is safe for me to make contact I will be glad to try. I put my faith and trust in you Mr. Knowles, as you must understand I must at all times have Mrs. Swan as she can get word back to my members on M4 A F F A

27.

May 26, 1954 3 p.m.

OEEU ▷ --- All

I will try to have AFFA reach you Contact is un.....

4 p.m. about

OEEU ▷ ---

AFFA I am sorry really and truthfully
I do have very good reasons but I will not worry you with
these even though you feel that you have been duped I am
real and as I have said before you have seen me I do know
that you have faith in me in spite of the fact that you feel
let down as you say Plans have gone astray for the time but
I will try to see you in person I need you very much It
has already proven very valuable in our work Men on Uranus
do not answer to their wives' demands rather we adhere to
their wishes I will do likewise in regard to you You say
you are my secretary Contact is a more important factor
in our work Love as always Keep faith Pray for us

May 26th 1954 8.30 p.m.

OEEU▷

All

We are taking a long time to converse but I wish to be able to signal you in AFFA's absence Yes He has much to do He takes care of all the personel on Clacteen I am the timekeeper for the ship I tell AFFA the cycle timing and longitude and the position of planets Do not be discouraged with our behavior We do not have the ways you do Maybe we can teach you some of our ways We never blame another for failure to perform a task We believe it far more important to pray for fulfillment Yes Yes AFFA always travels alone He does not want you to know of all the dangers we encounter He is safe but very busy Jupiter is an old planet but the people are all very young in appearance Jupiter women are very much like the women of earth Unlike AFFA and his many daughters I have a son He is very light like his mother I think AFFA is confused about the cycles as that is not his true work

We measure cycles or Solar time on this space ship M4 M4 from the conjunction of M4 and the sun which varies according to the speed we decide to travel Because we move spiral-wise around the Euenza the conjunction time does not necessarily remain the same as your new moon cycle Today we moved the ship due to an unexpected change in magnetic lanes A magnetic lane is the unseen but present force of attraction that main-

tains the proper balance of the planets About every planet there is a force you call gravity There is also a phenomena known as magnetic fields of action divided in layers In outer space these fields become expanded until there appears to be void space but this is not so. All of God's substance is filled to capacity with cosmic substance from the great Creative forces that permeate the most minute substances We take the space ship to this part where there is no magnetic pull then in this suspended altitude we note our position in regard to the moon until we can utilize the magnetic force created by the slowly rotating Clasfeem This causes a polarization and since your moon has its ^{own} ~~its~~ orbit our ship assumes a like orbit as long as it travels in the same orbit. The pull of the magnetic field created by the moon gives us an atmosphere The moon's atmosphere is not dead as you believe We have many bases on the moon We are very glad to explain this to you I hope you can understand this. You will be very helpful as you supply a magnetic force from the Euenza to our ship M4 M4 At any time you can call some of us here when there is a need and at any time we can call you So may it be that you serve us in the name of the OEEU who is pledged and every soul here to do the work of the Creative Spirit

(Question: Communism?)

Communism is one of Euenza's plagues as the same disbelief of the Creator is also a plague. A planet cannot live without the love of God Love to you all Stay with us

Alll clll

OEEU  — M4 M4 May 27th 1954 9.45 a.m.

||||| — 78° East longitude 47° North latitude I have observed how you figure longitude so will record it your way. The ship is moving along very successfully now Yesterday we ran into difficulty with the magnetic lanes There is much trouble over this spot on your map The vortex set-up or rather magnetic harmony disrupted gives us an unstable position on M4 M4 - due to the balance necessary to ride on the magnetic contour of the regular orbit of influence I am very glad that *Alll* came and explained the mode of travel and the meaning of our cycles He is very wise in these matters We are very glad you reconsidered and will continue with us I will however try to see you in person in the very near future Pray for our successful fullfilment of our mission/^{to}earth and true devotion to any task is the Open Sesame to progress As we go forward we hope to gather momentum and we fully expect that the seed of service planted will ripen into a glorious harvest Lots of love for patient service and true understanding Keep faith and you will see the results in their due time A F F A

(Question: Why do I often see static sparks on the paper
I'm writing on and sometimes on my hand?)

That is the magnetic overflow That is as near as I can
describe it to you You are controlled by magnetic im-
pulses such as are used by the brain to move any part
of your body I hope you understand Do not fear

A F F A

May 27, 1954 7.40 p.m.

OEEU  --- M4 M4

We understand that Mr. Knowles wants us to make a promise of personal contact That is possible but I am not certain that the effort would be proof even though we should make the personal meeting I think if the Navy Department will try their short wave I could move near enough in one of our mother-ships that have short wave equipment plus many other control devices within. If you tell them to signal M4 M4 A F F A I will try to answer Band GMM - 306 will reach us and we can reach you on on this I am very certain 306 Band My contact is worried for me but that is not necessary I am very definite about this number I am sure you will have many opportunities to know we are friendly Somehow I am moved to say that insistance on the part of the Government is not at all necessary as we could easily have taken it over several years ago When your people were not sure whether you were believing what you saw In this state of bewilderment panic can occur and masses of people would run ~~riot~~ riot How do you feel about the A Bombs that can go off at a moment's notice with two countries not daring to trust each other You do not own bells like we do and you demand proof I too can feel indignant but I really do love you people of Euenza the more I get acquainted But your doubts are very immature even for a country as far behind in progression I would expect more cooperation. Your people work for the common enemy known as Communists without any guaranteeing of recompensation or future immunity from danger of any kind

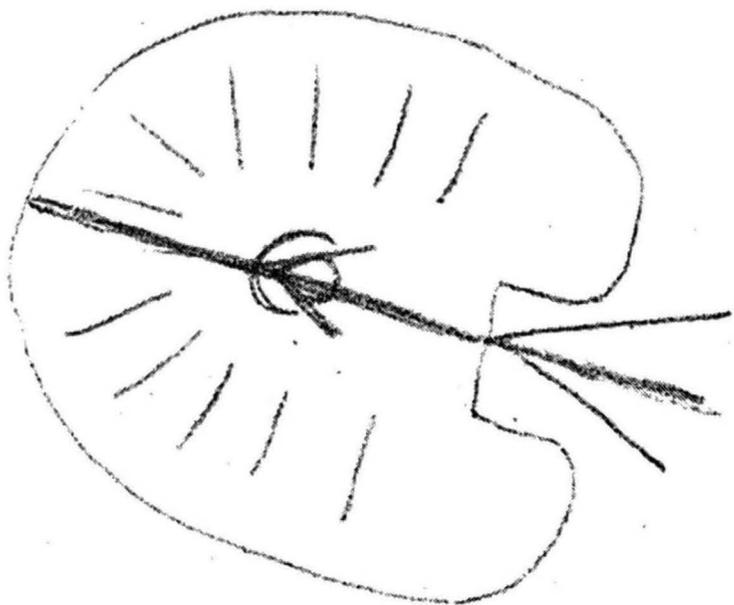

Our people lay down their lives for you and you ask
for proof Short wave should do this Even the most
hardened skeptic should know this Peace

A F F A

Yes I will try to shape it on paper for you

ANKAR22is speaking

OEEU  M4 M4

We are very sorry we got so angry but we believe that time is important and so much of it has lapsed. We do not wish to be uncooperative but your Government is lengthy in finding facts and a long questioning and methods of guarantees divert the true issue, and important things must be done.

I will try to contact you soon but cannot promise as we are very busy at the present time We have things very well under control but at one time the ship was very unstable I will tell you if there is anything to be done before you leave for your camp Don't look for me as I cannot come at this time

As ever A F F A

OEEU  M4 M4 4.00 a.m. May 28, 1954

We are not... We are here to tell you that we wish to let you know that we do not wish to have you get up in the morning for us but that some of our sons are out and it helps if we can get your response Yes, that is fine Love to you as always

A F F A

OEEU  M4 M4 8.35 a.m. May 28, 1954

||||| - 57° longitude east 47° latitude north

That is the way I like to have you do A clear mind will not deter me from writing a true message to you We wish at all

times to answer questions The reason we have chosen you is because of the spiritual development you have achieved
 Your husband is very good in his heart and that is about as good a virtue as any among your people Also he is true to you and will permit you to serve and that in itself is very good. When we want to contact in person we will let you know in ample time so that you can make your home plans fit the occasion. As far as transportation to any part of the country is concerned I will personally see that you arrive in safety as well as you are to preserve myself. Do not let the mode of travel trouble you. I will see to that as long as you serve me faithfully I will do likewise I understand your situation and now I must leave I am wanted

Love A F F A

M4 M4

2.40 p.m.

May 28, 1954

Yes we are here watching as you read about the weather balloons They look very different when they are aloft, than our bells Our bells are made of mabonite and that is aluminus metal that has become lighted by the friction of magnetic pull as is the light of the moon when the sun sends its reflections which in turn become heated and reverberate upward again into the atmosphere. We take the bells out of friction by increasing the impulses until they reach the supreme point possible to attain the power of subtraction.

when they reach this point in acceleration they appear to disappear from view but in fact diminish to its unit of infinitude or from the substance from which all substances are derived from. In this state of infinitude the soul is very conscious but the body like all materials changes also. We do not prepare ourselves for travel as your pilots do. We put ourselves in the power of the Creative Spirit. It takes about ten years for any person to develop so that he or she can travel safely from planet to planet. We can, however, when we come into the earth's influence, take on the material from which we were originally created. Many of our bells do have seating capacity for several people and as long as we travel in the contour of the earth's influence we can transport any of you earth people safely.

Our own planets are of material the same as yours.
We have trees and flowers, brooks, rivers and, yes, oceans.
 Our fields are vast spaces of growing things. Our atmosphere is exactly the same as yours. Our problems are not the same. I am from Jupiter. We have schools very much the same as you do. Our children are our problems mostly as we do not keep them in school as long as you people. If a child does not know how to choose his profession then we have the problem of fitting him to some work where he

may be helpful and at the same time happy and content. We do not have political parties as you do. We have organized supervisors that oversee how our planet is governed. Yes, we do have countries that differ in race distinction but we learn to love all of God's children and therefore we do not seek to destroy each other or to take away that which belongs to them. We have a United Union of Countries all vowed to ever expand the good that may come to the other. Our planet is much larger than the earth being around seven times as large. Yes, we work for a due exchange of values but we do not ever seek to surround ourselves with luxuries, rather our lives are lived in accordance with God's Great Divine Plan. We do mostly raise flowers, vegetables, grain, and animals. We surround our homes with many trees as they are the true indicators of the God power wielded in the earth to point to the highest possible instance. Many of our pets are like your's. Cats and dogs we love. Our horses which are very similar to your own with one exception: We do not use them for beasts of burden but we do ride and have many races. We also race our dogs but in a very different manner than you do. Our dogs are trained to love the sports rather than to chase a mechanical rabbit with the lust of blood in their hearts. Yes, our planet has an

5.

envelope of oxygen the same as the earth. It does not hurt us any to breathe your atmosphere. It is in substance the very same. Even this mode of travel which we seem to accomplish so quickly can be done by you people only when you reach that point in progression where all things are understood. Yes, we could very easily take a person from your earth back to our planet but he would first have to be overcome by the spiritual forces until he sleeps in order for us to transform the body as our own. Several of us could prepare one so that his transit would be safe. If he were not frightened he could withstand the transition without preparation. I have been on your earth's surface before and know that it could be very much improved with the proper instruction. Your earth is very beautiful and we also love you people as ourselves. Be one with us in our effort to repair the balance of atmospheric pressures and the Universal Brotherhood of Man can be a very happy union. I know that you are wondering about what the Government of your people will do to help. We are hoping and praying that they will cooperate with our work. If the worlds would sing the song of service all would be divine. Your world could help if they would learn to control themselves without resulting conflicts and they could unite all countries in many ways as we have done on Jupiter. Love,

worship of the Creative Spirit and service that will mend the ill will of the nations and put the pendulum of balance back where it belongs. Somewhere in the great new time that will arrive you must learn to do this. No one can ever live unto himself alone nor can he worship anything outside of himself as the throne of God is reposing in the hearts and souls of every person. Sing together and pray for that day to come when all the peoples of all the nations will know their Creator and abide in his Holy name. Then and then only can the planet survive. Any country that does not believe in God must be punished. We must not punish that nation. It will punish itself and that spark of Divinity that always remains will spring up out of the ashes of ruins and clothe itself in a bright new garment. Yes, it is true nothing is ever wasted in substance. It becomes changed. It is reduced and then recreated in a cloak ever new until the spirit within weakens and deteriorates. This is the cycle of lives, planets, and all living things. Your astronomers do not receive the true picture of the Universes. All conditions are false even as the end of a stick is distorted when stuck under water. This is hard to understand. Even as the stratosphere is rare it is at the same time opaque therefore reflective. Maybe when you can touch our planet as we have touched yours you will understand this message.

7.

Love is the greatest force in the entire length and breadth of infinity which can never be bounded by any lines of measurement. The vastness of the universes is so tremendous that the unaccustomed ones faint with the realization of their own smallness. Love is a cohesive force far greater than the lusts for glory that trespass the hearts of men into the ovens of murkiness. Love is the true healer. A mother often heals her babe yet in her heart of hearts she does not realize the vast amount of healing power that is available. We all love the people of earth. We are becoming more acquainted by our contact with you. We see and hear the friendly faces and thoughts that prevail. How can a lovely race like yours build for destruction of their fellowmen. Brothers all. Let us pray that may be so. Lots of love to you all and all of your very fine friends and acquaintances. We do love that ye too may love.

clw

M4 M4 7.15 p.m. May 28, 1954.

We do not need you to write sometimes the impulses seem to move you but we will be careful not to make you do anything you do not care to That is the way Clear the mind Let the body become loose enough to control the writing arm.

8.

That is definitely the only part of your body only
your arm this time I was thinking of you but I did
not intend to convey any impulse to write Keep on
with the practice of perfection. Love A F F A

5.30 a.m. May 29, 1954

0600 → M4 M4 11111 - 63° east longitude
47° north latitude A F F A Good morning yet I cannot
see except that I see clear through your eyes It is dark
at all times in outer space We do have aluminus types of
light that we use to get about on the ship but it is some-
times very lonesome We do love to go to our homes but in
the spot where we are now working it is impossible to
leave This country beneath us is very barren with the
wails of anguished souls We are looking forward to a more
bright outlook as we travel over ocean terrain The blue
stretches of ocean gives us added impetus in magnetic
strength We love to feel the serenity of this redistri-
bution of magnetic output. Yes, we can see the earth from
where we are It looks very much like a large ball within
distance so that we can see with our instruments vast
lighted areas like your large cities glowing in the atmos-
phere. I will try to answer some of the questions you

have there. Let me answer freely Do not try to think in any manner. Try to watch without any care on your mind. You will never be blamed for inattention.

The population of Uranus is very large I can get this figure for you Wait a moment please. 787,730,016.

Yes, that is the number, 787,730, 016. Our planet is very much larger than the earth. It is about eleven times as large. The terrain of Uranus is exactly as your earth, I would say. We have more mountain ranges due to the size of the planet. Our oceans are not as deep as yours as we have been able to keep a more even balance therefore the planet has not deterred from its shape. Your planet was out of balance many years ago as you may know yourself Tropical remnants have been found buried beneath the snow caps of your northern countries. Many of your lands have sunk into the deep crevice you now know as oceans and the lands that were oceans have been raised to your plains. Since our terrain is the same we also breathe oxygen. Yes, we could very easily take an earth person back to Uranus. It, however, would be necessary to put him or her into cosmic sleep first as the shock to a human body would be beyond repair. Our Government is very much like your own. It is a government by the people. We do have parties but we do not call them political. We call them cyclic parties

and we plan to alternate cycles every three years in order to keep an even balance of cooperation between trade and progression. The cycles of three year periods are cycles of planetary trade. Cycles of Progression: In the cycle of progression we create new things, perfect that which we have, and become richer in mental and spiritual development. In our cycle of trade we manufacture materials that will extend over into our progression period. Yes, we have beautiful farms. Of course, these keep on in both cycles but the farmer tries to arrange his work so that the heaviest of it appears in the progression of trade. This is the time they enlarge their dairies and do long range preparation of food stuffs to last into the period of progression. Yes, it is quite evenly balanced. Problems are our pleasure. They are challenges to the progression of the soul. Everyone welcomes any problem that arises as it means the soul is progressing. If no problems arise one becomes stagnant and then development ceases. Our social life is about the same as yours. We do not use any intoxicating drinks or beverages of any kind. Except for that kind of party I would think it about the same. We dance, have theatres and places of worship. No, there is much more to be said. We do not have ministers telling us about the fear of dying without first giv-

ing to the church. You have a religion like that on your earth. Our churches are havens of rest and true worship of the Creative Spirit. Our ministers are teachers and the children are taught from an early age to love and serve that the Godlight within may glow. They take their spiritual very seriously. It can be done on your Euenza. As time goes on we are coming to love your people much better. Through your contact we can read the thoughts of others whereas before only pertinent facts arose. The friends and people you meet and work with have beautiful thoughts of friendliness. Diety is missing in knowledge but it expresses itself intuitively. Think how great your people could become with the proper training in harmony of living. I can see the furrowed brows disappearing and in their places a people of wonderful talents and good will. Some of your nations are held back by the tyrrany of rulers who are greedy but remove the yoke and they are but yourselves filled with love and cheer that does not dare to express itself. It would be a good thing for all of you to take your Bibles and read the life of your Savior until you know exactly what He is like in your hearts. Many problems are solved by His teaching;

12.

all of our great masters and teachers have the same basic love message. I have written long enough. Will detone later. Love as always, A F F A

9.00 a.m. May 29, 1954

M4 M4

Yes, this is A F F A. I have come again to tell you that we did back up so that you will not doubt what I tell you. Our ship did lose time and we had to retrace some of the lanes in order to repair some of the damage done. It is a dangerous work in your mind but we do have a means to recover with the aid of our bells and the devices on our Mother-ship which control the atmospheric magnetism. Now I will let you go as I know you are going to be busy in the next few (days). That is all right. I understand your place in this world of yours so I will not bother you again today. No, I did not mean it to sound that way. But I do realize that you do leave whatever you are doing to answer. Thanks very much. I do appreciate it more than you will ever know. Love to you all.

A F F A

5.30

May 30th, 1954

M4 M4

48° north latitude

58° east longitude. Yes, that is a deterrent in communication. We will try to answer some of those questions.

Mabonite is not a mined metal. It is an alloy. There
 is a formulae for its manufacture but that is not in
 my line of work, but I am sure when we can meet some
 of your technicians it can be given to you people.

When the space ship first took its place in outer space
 was about 3 years ago according to your calender. We
 tried it out near the orbit of Mars first. It has made
 seven revolutions as I have recorded. We do use magnetic
 power almost wholly but we also use electricity for many
 of our devices and mechanical equipment. The first step
 for mankind to take in order to use magnetic power is to
 know more of its origin. You earth people would be very
 surprised if you knew of its true origin. I will try to
 tell you something about it. It is first created by the
 activated forces of nature. Man is powered by the mag-
 netic pull of his planet and the motion of the planet in
 space. As he walks in the true polarity the magnetic
 power increases; when he walks away from true polarity
 his life decreases and he grows old and finally dies.
 The same thing happens to a planet. As long as there
 is true polarity with the source the planet lives and
 all is well. If man keeps in mind the action of the
 planet on which he lives he is taking the first step.

is the one to explain the mode of operation as

14.

he is one of our best technicians. I am also going to have another man here on the space ship write some of these days who can go into detail for your Government. I will let you go now as it is time for you to get breakfast. Love as ever, A F F A

10.30 p.m. May 30th, 1954

M4 M4 Yes, it is me, A F F A.

I came to answer your question about clothes. On my planet there are several customs of attire. Some of us, myself included, dress the same as yourselves and some of us wear robes, some white, and some dark brown like monks and teachers. Then there are some that have special dress like your gypsies and some like the oriental in the Far East. Many of our races wear little or no linen, especially the children, They wear instead something like your sun suits as our Planet is warm most of the time. Our old men usually adorn a robe of purple if they are particularly learned. Many of our young girls like to wear long skirts for dancing and they also cut their hair. It is similar to the way your daughter does her own. I am sure you people would not feel as strange on Uranus as on any other planet as our people are more like yourselves. On some of the planets they

do have various customs of dress. We also have animals very similar to your own. No, our language is quite different but not too difficult to learn. If you should care to learn it I will try to teach you people when I write as it sometimes makes for better understanding. Love in the language of my country is phonetically "mu". Yes, mu.

A F F A

7.30 a.m. May 31, 1954

0930:5 - M4 M4 11111 - 48° west
 latitude 48° east longitude Yes Just wonderful
 We are going on our speed again. For a while I was wondering if we were ever going to regain our momentum. Sometimes this work is discouraging. It takes so much magnetism and so long to send out the lines of forces so that the vortex will assume a balance once more. (Question: If Russians had exploded H Bomb - what made the vortex?) I will not divulge any of the secrets that are between nations as I am a Universal worker. All nations, as far as I am concerned, are yet in their swaddling clothes of development. From my viewpoint it would be like taking sides in a family

quarrel. What we want to do is to establish Peace among all nations. Then and only then can the Planets survive. We find many of the vortex spots as we go around the world. Some are caused by erroneous thinking. Your Dust Bowl, as you people frequently call it, is an indication of greed and man's neglect to the planet. Other spots you have are over some of your large cities where sex greed is running rampant. It causes such a nuisance to the forces that they weaken and drop away. When this happens it is like having a low flat bowl filled with water and suddenly pulling the plug. At first the water runs away then the vortex occurs as it swirls counter clockwise on its way to cessation. Now I will let you go for a while. Sometime I will tell you about the kinds of vegetables and flowers we have on Uranus. It is very beautiful in Spring on your Euenza and I enjoyed your trip to camp very much. The terrain is very much like our Uranus. Some of the early shrubs are the same. Now I will sign off. Love as ever to all of you on Euenza. Give a hearty thanks to Mr. and Mrs. Knowles. We will love to meet them.

A F F A

17.

10.30 p.m. May 31, 1954

M4 M4

Yes, I did need to write to you. We are going to try to see you in a few days now. I will not promise, however, because I do not want you to look for me and then have to give it up again. We do have some instructions that will be helpful for you as well as for us. Sometimes it may be possible to contact you from many planets. We are going to try this sometime. We believe that we can complete our mission without too much difficulty and then it will be advisable to teach your people how to live outside of error and sin. Keep peace and do not think too much about what you may be asked to do as I will do the worrying if there is any to do. Just let everything be as easy in your mind as possible and everything will be fine. You are a very sensitive contact and you can serve us well. There isn't anything to think about doing in the future. It will be looked after by our own personnel. Yes. Love to you all,

A F F A

M4 M4 7.25 a.m. June 1, 1954

44° east longitude 48° north latitude Yes, we did get slowed up a bit. But all is well. God bless

our contact that it may be of service to mankind. Sometimes we think too far ahead and do not anticipate the weakened conditions until it is too late. We are all fine, however, and really do not see any reason why we should not move along more swiftly. You people have many questions to ask of me. You have wondered how we can learn your language. I will tell you that it is far easier for us to learn yours than it will be for you people to learn ours. In the first place, as one soul to another, the language of thought-waves translates itself into words fitting to the brain that receives it. Then we have many spirits that have passed from your realm or world the same as from all planets. There is a common meeting ground in the land of spirit or heaven as you people call it; from this point all speak the same language yet in every conscious soul there remains the memory of the language he or she spoke on the planet where they lived. We have only to contact one of these spirits who has progressed to the station of Universal teacher and then all is very easy. We can also tune in on your television and short wave receivers, your radios, and hear the actual words spoken. Therefore it is very

convenient for us to learn the language without first setting foot on your earth. As for food on the Space-ship M4, we cook and prepare it as you people do on your ocean liners. We employ cooks and our food is brought to us in our Motherships from the various planets that form the Association. I do not care to divulge the number of planets in our Association of Planets. OEEU means Universal Association of Planets, Project EU or Euenza, meaning the name of your earth. Why do you not believe that I can tell you what I care to. Yes, we do have roadside eating places on Uranus. We have vehicles we ride in on Uranus but they are not cars. We can use them on water, on land, and in the air, much the same as bells. I do not know what to call them as you do not have anything like them. Our days and nights are longer than yours but I do not know in relation to your hours but I will find out and have him, tell you about it as he is very clever figuring cycles and time. Each planet has its own devices for dividing the revolutions into units of time. I will tell you later how many hours longer our day is. I am going to Uranus in a very short time and will be back sometime Wednesday. In the meantime Allen will write and maybe if all goes well we will introduce a new

member in our corresponding group. He will be able to tell your Government many things concerning cycles, materials and laws governing the motion of the planets and resources of magnetic forces. Do not worry about anything he may want to write as you know you people have some very odd notions about the planets, so let him speak freely. Do not doubt what he may write because it does block communications and the true flow does not continue to carry the true picture to your thought structure. Now I must leave. God bless our contact and much love to all of the people on Euenza.

A F F A

1.30 p.m. June 1, 1954

M4 M4

Good. A F F A asked me to write in his absence. We were asked how many hours long was a day on Uranus. A day on Uranus is approximately eleven times as long as your day as by the cycle of revolution. But since no human being can stay awake and go without sleep they divide revolution into segments of time equivalent to your own day and night. It is never dark like your night as the prolonged exposure to the sun's rays retains a large

amount of light and no time is it ever darker than your dusk. Many wonder why one planet is larger and another is small. It is in accordance to the size of the needs of the forthcoming life-wave that is in the process of evolutionary progression. My planet is very similar to Uranus as far as the day revolution is concerned with the exception of seven instead of eleven. There are many things planetary that differ. Our food is much different. We, on Jupiter, do not eat any meat of any kind. We do drink lots of milk; we eat many vegetables and fruits and honey. We cook small cakes with nuts and seeds. We have perfected a vegetable that has the taste and consistency of your steaks from your cattle. We cook this much the same, varying according to the dictates of the cook. It grows on long vines that crawl upon the ground. The fruit is very large, growing as large as a man's head. (Planes overhead.) We know this. It is perhaps a very good omen. Some of us will be along to further the plan in view. Be steadfast in our service. A F F A is one of the best managers of the people we have ever known. Pray for him as he has much on his mind. In the morning I will write again in

his absence. I will also introduce you to a new one on our staff who will wish to contact you in his work. Now I will sign off and let you rest. Love to all.

OESU \triangleright ————— M4 M4 *|||||* 48° north latitude
 31° east longitude *Chell* Good. I am glad you can receive our messages so accurately. Yes, you will be needed very much in the near future. Some of our instructions seem strange to you but as long as you can receive them we can, through you, perpetrate the information to others. Tell your friends who want to develop soul power the first thing to do is to put love of God above any other love. Even the love of one's mate should come secondly. The next step is to know what the perfect life truly is and this is usually the stumbling block. Perfection in the eyes of God is very much more than perfection in talent or in looks or in any creative effort. Perfection is forgiveness; never hold anything against any person or condition. Perfection is seeing God's expression in every living thing. Perfection is seeing a condition as an opportunity to work with God to make right that that

was in error. Love is the great healer and the coalescing of every good condition. Through your great love of your country welfare we can come more closely to perfecting our plans for the entire planet. Many who serve become impatient and are of no more use to us. We all love you as brothers and the day will come when the great prayer of the Lord Jesus will come to fruition. In earth as it is in heaven. We pray for that great day to come. Now I will introduce our new brother who will be doing much writing in the future. His name is ALOMAR.

- - - -

ALOMAR. I will try to write so that in the near future I can assist AFFA in his contacts. I am a technician and there will be formulae given. Give me complete freedom of your right hand and forearm. In this way I can introduce new methods of improvement to the people of your planet. I am from Mercury. I will tell you many ways to understand the Oracles of God and the modis operandi of sciences that are more profound. Yes, I am losing contact. Next time will be stronger. Will try tomorrow. Love to you all on the world you live in.

ALOMAR

That is all

M4 M4 ||||| - 48° north latitude

We are not going to write very much today as you had a bad time yesterday. Our wave lengths were too much for your delicate nervous system. However, the magnetic wave coordinator did re-establish some balance and harmony. A F F A is seeking a way to establish his mission right now. Pray for him. We will not try to write again until evening.

Love to all and I am sure A F F A is as grateful to Mr. and Mrs. Knowles as we all are, including yourself.

Call Call

OEEU

M4 M4

6.07 p.m. June 3, 1954

We are very sorry that we could not make the mission we planned. Sometimes plans go astray. We will, however, try again. Yes, A F F A writing. I will try to answer some of the questions. We do have units of exchange when we trade. We have coins much the same as yours. We use symbols on the face of them instead of famous people. One of our most-used symbols is the Symbol of Motherhood. This is a coin with a lady's face with twin souls in the background. Since the use of coins are for trade in the purchase of merchandise, for food, clothing and comfort, it is the Motherhood. Other symbols used on documents and legal

bonds usually have a cross made in the form of an X. This, if inverted by way of bending the sides, would form the sides of a pyramid. Yes, I will try to draw

one out:  This ancient cross has been in existence for a long, long time.

I am not sure that A L O M A R will be able to talk directly to Mr. Knowles or not. Perhaps he could impress him somehow. This Spaceship is very far away and I am not sure if we can land very often. Much as we would like to we also have a job to do here. Sometime in the not so far future we will have to take a chance and land en mass. That is the only way we can be assured of our safety. Many of you think it must be easy to fly your bells but it is a very tiring manoeuver. One way you could help is to have your planes stop chasing us every time we make the attempt. I think that is all I can think of now. I will let ALOMAR make the most of his time now. Love to all,

A F F A

ALOMAR writing to you from M4 M4. My work is of a technical function. We tell our men here about the care and repair of bells. Some of our bells are mabonite, while we have some made of the fibre of plants heated in an aocomicle mixture that hardens and resembles silver. It

becomes more elastic as it is poured into forms and again heated to resist weather, friction and the molestation of cosmic rays. The rays tend to break down minute particles of any metal and transmutes them into various other substances. These are our Motherships that are of this substance. Our Motherships each carry a remote control device that can free six or seven as we dictate and they can go anywhere we direct them. These discs are very luminous and can be seen for great distances. The significance of these discs is that we can tell by their performance and color all pressures and conditions atmospheric. In this way we know where and the amount of magnetic power needed for that particular area. The formulae for the colors are as follows:

pale yellow 6483 project magnetic waves
red 73458 project
green 3456
orange 51378 project
blue normal

These waves when projected into the atmosphere with the use of smaller bells that have a type of generator

of a frictional manner that produce the waves designated by the indicating discs. Therefore there is no mystery about the discs. They can be flown or projected through space in any manner of position. The larger bells carry much equipment but all are subject to the fourth dimensional law of magnetic wave increase to the power of subtraction. When this law is fully apprehended then all interplanetary travel is possible. Now I will sign off.

A L O M A R

OEEU 

M4 M4

(continued)

We use you as a sound projector as at all times we can tell whether or not you are responding to our magnetic wave length. It gives us added impetus to have the negative pole attached much the same as ground on a telephone. We do not need this, however, but it does help. A prayer can sound very encouraging from outer space as all is cold, dark and void. Love is the ultimate in our work and someone on Euenza prays for us as we go out risking our lives on people who do not know we exist or care, I am beginning to think. Keep on and pray for us as we feel encouraged to go on. It

is very disheartening to work to save a people who care so little about themselves. We know a few of you folks care, so we keep on. That is the reason you are our guide-post to a better and more successful Union of Planets. Love,

A F F A

1 p.m. June 4, 1954

OEEU  M4 M4 // // // // // - 48° north latitude 06° west longitude. We are in very good spirits right now as we are progressing very well with the work at hand. Some of us are not sure that the people of Euenza really want the planet saved. We are working under strain as some of our sons here are getting homesick. Your planet is not a very happy one. There are children crying from starvation. Animals are neglected. Many sick and those wounded in in battles are very unhappy. The vortex set up by such suffering can do much to damage the balance of the planetary forces. In a few days we will be over your fair country but that is not as happy as you make yourselves believe. The cities are overcrowded and many are beginning to find that happiness can only be had when the warmth of sunshine can straighten out

the clouds of gloom as no other agent can.

Yes, we have some diseases on our planet. They come in cycles so we prepare an antidote for the cyclic influence. In this way the disease is allayed and very few people succumb to any bad effects. You asked if there was birth control due to the small population in relation to the size of the planet. No, we do not indulge in sex for the excitement of it, rather only for the expression of the Creative Spirit. Thus you can readily see that the population is not overcrowding conditions and suffering is alleviated.

No, I would not object to having my picture taken. I think it will be next to impossible to do so as I cannot find a way yet to get by the radar signals. Sometime in the near future I hope to make a personal visit. I have tried for several times and have had no success. I am glad to know Mr. and Mrs. Knowles are ever ready and I am very grateful for their kind regards. Love to you all,

A F F A

5.53 p.m. June 4, 1954

M4 M4 A F F A speaking.

I wish to tell you that we are going to decide about landing en masse within the next few days. We are going to the Moon Base for an extensive search of conditional recording that Space Ship L11 is making in conjunction with our work. When we compare notes on our research of Euenza we will hold a joint Interplanetary Tribunal. We will then decide the best time of the year, the most convenient place and the safest. We do not wish to take any lives nor do we wish to lose any of ours. I hope in view of the fact nothing has been done in the governmental department of your Country. Many of us are elected by the Divine Masters to instruct mankind to live together in peace.

Then as soon as I find out these things I will instruct you what to do. As you already know, very much may be expected of you. You can, however, do much with your study of cycles as it gives a better understanding of that which is to come. I do not wish to frighten you but our mission is drawing too close and something is going to be done in due time and it is about due.

I will keep on hoping that we can make some arrangement so that all this can be avoided but many are chosen and they shall be the ones selected. Read the Book of Romans, Chapter seven, and you will know more of what is to come. Love to all.

Yes, I did not want to get you out of bed but this is important: sometime today you will hear the signal. Write, but it will not be this Ship as we are giving some of your service to the Controller of L 11. This is a sister ship like this one. He is a very able person. Do not question him. Let him write freely. He will only write once a day. He wishes to contact an earth person. He wants to speak with you concerning many things. In other words he wants to ask many questions as he has not had free access to the study of Euenza people like we have had the opportunity of doing with you. Give him honest answers and as I know

your mind better than you do yourself, record the answers you give him directly after his questions, that you may be sure of complete honesty, should you believe your Government would care to have them. I will let you go back now if you care to.

His name is Ronnar. He has been interested in our contact but has decided all Euenza people were thrill-seekers and has become disheartened in getting messages through to them. I told him of your background and how much you have meant to us. He will contact you around six o'clock as a regular time because of the fact that I don't want you to become confused as to whom should write, it is so arranged. At any other signal it will be M4 M4. Always answer at six with this call mentally, (I questioned whether L one one or L two) L 11 L 11. L eleven. You are very welcome. That is all for now. Lots of love,

A F F A

Rear Admiral C.F.Espe, U.S.N., June 6, 1954
Chief of Naval Intelligence,
Navy Department,
Washington, D.C.

Dear Admiral:

I am sending you a second and more important installment of messages from and concerning AFFA, including a direct answer to one of my own messages. Again this is being sent directly to you for the same reasons as I gave before in my letter of 27 May.

As this thing develops the urgency of some positive action on the part of you people in Washington becomes more and more apparent. Believe me, these messages are real; you are not being assailed by a couple of crackpots. It is about time for some of our so-called bright boys to wake up to the fact that strange things really are happening; that we are being observed by beings like ourselves from outer space and that their intentions are peaceful. Believe it or not, communication has been established with earth through Mrs. Swan here in Eliot. Why she was chosen other than some of the big people in our land only the Creator knows; but she was chosen and you must believe it. Can you read these communications and believe they are the product of Mrs. Swan's imagination? Could you yourself have thought out and written them? No; they are very real and come from whence they say.

Time is getting short. Either you are doing something about this or you are not. In either case please let me know at once what your plans are. If nothing is to be done, say so and return all papers so I can start another approach to someone who will take action.

What would happen if there were a landing in force such as is suggested herein? The minds

- 2 -

of our people have not been prepared for such an eventuality and I feel pretty certain that military personnel of all branches have not been told how to react.

Hopefully,

H.B.Knowles

R. Adm., U.S.N. (Ret.)

DEPARTMENT OF THE NAVY
OFFICE OF THE CHIEF OF NAVAL OPERATIONS
WASHINGTON 25, D. C.

IN REPLY REFER TO

8 JUL 1954

Dear Admiral Knowles:

Thank you for your letter of 6 June 1954 with which you forwarded additional transcripts of Mrs. Swan's thought transference. They have been referred to the appropriate offices in the Navy Department for consideration. It appears that such transcripts will continue to be viewed with some skepticism by the technical offices unless a more conventional means of communication is arranged.

Sincerely

Carl F Espe
Rear Admiral, U S Navy
Director of Naval Intelligence

L 11 L 11 ~~////////////////////////////////////~~ 117° west
longitude 15° south latitude

PONNAR speaking. AFFA, yes, AFFA is here with me on L 11. Yes, he wants to know if you are going out tonight. (Ans. Yes, I am going to graduation exercises.) He will be back on Space Ship M4 M4 at midnight, so do not listen for him when you get home. (Ans. Thank you.) We want you to know that we did not have a very successful try today, but I do believe we may in the very near future. (Mrs. Swan: Sorry.) We want you to call our signal now. (Ans. L 11 L 11 L 11 L 11 L 11) Good. Can you hear my signal? (Ans. No, just a pressure in my ears.) Sorry. We are trying. Now, I would like to know if you can tell us where M4 M4 is now. Try to locate it.

Mrs. Swan: M4 M4 M4 M4 M4 M4

M4 M4 answering. ANKAR 22 answering.

Mrs. Swan: Ponnar says to locate you.

We are at 48° north latitude, 89° west longitude.

Mrs. S.: Hold this signal: L 11 L 11 L 11.

L 11 L 11 L 11 PONNAR answering.

We, M4 M4 are at 48° north latitude 89° west longitude.

L 11 L 11 Good.

Now we wish you to locate a Mother Ship No. 888.

Mrs. S.: How shall I call this signal?

K 888.

Mrs. S.: K 888 K 888 K 888.

2.

K 888 K 888 ALOMAR

Mrs.S. L 11 wants your location.

K 888 ALOMAR 89° west longitude 38° north latitude.

Mrs.S. L 11 L 11, K888 is 89° west longitude, 38° north lat.

L 11 L 11: Good. Now find Mother Ship 789.

Mrs.S.: What letter is the Mother Ship?

B 789.

Mrs.S.: B 789 B 789.

B 789 B 789 MOBON MOBON.

Mrs. S.: What is your location?

B 789 MOBON 53° north latitude, 73° west longitude.

Mrs.S.: L 11 L 11, B 789 is 53° north lat. 73° w. long.

L 11 L 11: Good. Now find Mother Ship D 456.

Mrs.S.: D 456 D 456.

D 456 D 456, MORRO MORRO.

Mrs.S.: What is your location?

35° north latitude, 120° west longitude.

Mrs.S.: L 11 L 11, D456 is 35° north latitude, 120° w. long.

L 11 L 11: Good. You have proven to us that you can help us more than you know. We will not call you again this evening, so we will sign off now.

PONNAR signing off.

11.30 p.m.

June 10, 1954

M4 M4

AFFA. We are back now from our bell hop to Space Ship L 11. We want you to know that we are trying to use you as a finder if at any time one of our men should get lost. (signal was weak.) Yes, we know. But that will all be taken care of. I know that is all right, too. We want to begin next week to get some of our men on the ground. If you can locate them, every one will feel much safer. I will let you know when we need you so that you can plan accordingly. I am pleased that you told your husband of the magnetic tie of the planets. That will suffice, yes. Now I will get some rest and see you in the morning. Lots of love, AFFA.

6.55 a.m. June 11, 1954

AFFA speaking. Good morning. This is one of the times that I can really say it and mean it wholeheartedly: we had a most successful meeting with PONNAR. He thinks we should take matters into our own hands and not fool around trying to be known. You folks have done very much to enable us into their attentions. Your government is not the only one involved. You have many

nations and none of them seem to want to know or recognize. One nation can help us to acquaint ourselves with other nations, but your United Nations as per Mr. Knowles' message to me does not agree and there is very certain enmity between some of them. Veto-power apparently sustains this enmity. Since it is the entire planet we are concerned with and not some particular spot, we cannot hope to achieve very much even with your friendliness which I would cherish. I am sure I must bring my plans before the Tribunal next week and so this is to inform you that we bear no malice toward any nations or peoples and come in the best purposes of universal welfare. I hold this nation as very conducive to this universal welfare through Mrs. Swan, Mr. and Mrs. Knowles and Mrs. Swan's family and friends. I have learned much of the good you are doing throughout the world. I know of your many charities and organizations that reach out for the general love and upliftment of all mankind regardless of race or color. Some of you must reach more through your fellows. I was very proud of my contact last night. She extended her hand to
 * a former enemy of your people. In her great friendliness she made him feel very wanted and respected. This is the general feeling among you, and I must close now. Lots of love and very best wishes,

A F F A

* Note: Affa refers to Hishashi Ko of Japan, a graduate of the University of New Hampshire who received his master's degree there this month. He gave the principal address at Eliot High School's graduation exercises held at Eliot Congregational Church on June 10th.

8.55 p.m. June 11, 1954

Oct 11 #4 #4 *11111* Affa. No, but it is time for

Ponnar - wait for him. I do not know what to say to Mrs. Knowles' message of June 10. I thank you people for the kind cooperation and the regard you have for us. We do not conceive of any good it would do to take this to your press, but I thank you for your efforts. If you do get results I will try to do my utmost to cooperate with you. As I have stated before I must have the assistance of more than one nation as one can never live alone. All are one and one is all. Before you publicize this let me know of it first. Now is time for Ponnar. A F F A.

(After Ponnar's message, which see.)

No, I do not need to write any more, only on occasions as I can easily speak to you mentally. If, however, you would like

to check with me sometime, altho I do not see why, I will.
You are receiving my direct quotes very accurately. Lots of
love as ever and always,

AFFA.

9.06 p.m. June 11, 1954

L 11 L 11 - ~~XXXXXXXXXXXXXXXXXXXX~~ - 15° south
latitude 129° west longitude. PONNAR. (Mrs.S.:Good evening)
Good evening to you. Can you hear my signal? (Ans.No, only
a pressure.) We will try again tomorrow. (Ans.Yes) Now I would
like you to locate one of my Mother-Ships for me. K 7771.

Mrs.S.: K 77771.
K 7771 K 7771
Yes.

Mrs.S.:Location - Ponnar L 11 wants to know.
113° west longitude 16° south latitude.
Mrs.S.: L 11: K 7771 is at 113° west longitude, 16° s.latitude.
L 11 L 11: Good, Ponnar. Good. Locate B3345 - B 3345.
Mrs.S.: B3345 B 3345 - L 11- L 11 calling.
B3345 - B 3345 BONNAR BONNAR
Mrs.S.:L 11 wants location.
BONNAR 48° north latitude 15° west longitude.
L 11 L 11 - B 3345 is 48° n. latitude, 15° w. long.
L 11 L 11: Good. Ponnar. Now, please locate 7389-45 Bell.
Mrs.S.: 7389 - 45 Bell & 389 - 45 Bell
7389 - 45 Bell 7389 - 45 Bell CLOROPELO

Mrs.S.L 11 L 11 - Bell 33-45 is 34° n.lat. 57° e.long.-5000-1.
Yes, good. Now call M4 for me.
Mrs.S. M4 M4 - L 11 calling.
M4 M4 - /Y/YI/AXIX/ Affa
Mrs.S.: L 11 wants you.
M4 M4 Affa.
Mrs.S.: M4 is now answering L 11.
L 11: Good. Tell Affa everything is fine.
Mrs.S.: M4 M4 everything is fine.
M4 M4 Good, we are fine also.
L 11 L 11: Call one of our technicians to the aid of onw of
our bell ships.
Mrs.S.: How shall I do this?

Our technicians' signals are K-K. Yes.

Mrs.S.: Which bell?

Bell 4344-33 Bell 4344 - 33.

Mrs.S.: K-K K-K - please contact Bell 4344-33 Bell 4344-33.

K-K TOLMAR I will go to aid Bell 4344-33.

Mrs.S.: Good - L 11 L 11, K-K Tolmar going to aid Bell 4344-33.

B 4344-33 please give location.

Bell 4344-33 - ANDREAOPIA My bell is latitude $37^{\circ} 75^{\circ}$ s. long.

K-K Tolmar - Bell 4344-33 is located at 37° N. Latitude 75

Bell 4344-33 what is your longitude, east or west? (75° west long.)

Bell 4344-33 Longitude W. 75° .

L 11 L 11 Good. You have proven that you can be depended upon to locate our personnel accurately and intelligently. Thank you. In the near future when we decide to really land in purpose I hope you will stand by for our appeals. We will let you know, however, in due time so that you can make plans accordingly. Now I am finished and shall report of your progress to our Tribunal.

Mrs.S. Thank you. I feel very humble.

~~affa~~ Ponnar; You are not to be humbled. We need you. Lots of love to you and your friends. PONNAR.

10.22 p.m.

June 11, 1954

PONNAR L 11 L 11 -

Mrs.S.: I hear your signal now - is this signal the same as M4? Yes. I am glad you can hear it.

Mrs.S. I can really hear it now - not too loud but audible.

Good. Now I will let you go. I am so glad to have accomplished our contact. Love, PONNAR.

9.15 a.m. June 12, 1954

L 11 L 11 ~~16~~ 16° south latitude 129° w. long.
PONNAR signalling.

Mrs.S.: Good morning, Ponnar - Swan.

Good morning. We are overjoyed that you can hear my signal. Affa said you were going to be busy later on in the evening.

Mrs.S.: Yes. Dawnalyn has a dance recital.

Good. Give her my congratulations.

Mrs.S.: Thank you.

I merely wanted to test my signal and reception. Thanks for the attention. Lots of love from L 11 L 11 PONNAR.

1.

12.00 midnight June 12, 1954

WEEU L 11 L 11 Ponnar. I have been trying to reach you. Did you hear the detone?

Mrs.Swan: Yes, I have heard it - you were not to write again until morning - remember?

Yes, I remember.

Mrs. S.: There are at least six hours before a.m., my getting up time.

Oh, I am all mixed up in your time. This is a.m.?

Mrs.S.: Yes, but in the middle of night.

Sorry. Were you in bed?

Mrs.S.: Yes.

I am indeed sorry. I did not mean to do this.

Mrs.S.: Now that I'm up what do you wish to say?

I was testing out the detone. How is it?

Mrs.S. It is loud -it hurts my ear and even my throat is sore on that side - believe me, it works.

Good. I hope you are not angry with me.

Mrs.S.:No, I don't get angry very easily.

Good. I don't know your habits yet.

Mrs.S. I go to bed around 10.00 p.m. and get up around 6.00 a.m. usually.

I will try to remember this.

Mrs.S. I don't mind - any time, once in a while.

I must say that I am tired also and you may go back to bed.

Mrs.S. When do you sleep?

I work until I'm tired and then I ~~am~~ sleep until I am refreshed or until someone contacts me.

Mrs.S.Thanks for taking away the detone - it feels better.

Good. I do not wish to harm you. When I get used to you perhaps I can talk to you more freely.

2.

Mrs.S.: That is all right with me. You spoke of motives.
Please, kind sir, what are yours?

I do not know of any motives that I could possibly have. I
am sorry I mentioned that you might have any.
Affa warned me that you were an independent lady.
Now I know what he means.

Mrs.S.: I sometimes wonder what you plan to have me do.

I am not surprised. I must say you were literally picked out
and did not have anything to say one way or another.
You have proven successful and we all love
you. Just keep on and I am sure you will find
our motives the most exalted possible.

Mrs.S.: Good. I hope I can say as well.

Now that we trust each other we should get along fine.

Mrs.S.: We are just fine - now -

Why did you not write what came to mind?

Mrs.S.: I have learned to think before I even dare to think
with Affa.

I don't know how to write a hearty laugh, but I am getting one
now. You have been under censorship in the strict-
est manner. Did you know we did not believe you
would keep on with him?

Mrs.S. He is a very fine personality.

Yes, we all love him. He is doing a fine work and lots are ex-
pected of him. Now I will go. Love

PONNAR.

1.55 p.m. June 12, 1954

L 11 L 11 Ponnar.

Mrs.S.: I heard the signal.

Yes, I have been trying to reach you for quite a while.

Mrs.S.: I'm sorry - I have heard it for quite a while but thought you
were not going to call until tomorrow.

That is right. I told you that but I also wanted to know how
alert you were.

3.

Mrs.S.: Sorry again. Sometimes the signal sound lingers a long while. Affa has asked me to ignore it after he has told me he would not write until a stated. time.

I did not know this. Now it is my turn to be sorry.

Mrs.S.: Let's start over again - what can I do for you?

Nothing. I really like that sense of humor, "let's start over again". I had to think what you meant. Now for the fresh start. I wanted to know what is the most convenient time tomorrow to write.

Mrs.S. I am going to a wedding in the afternoon - any time in the morning.

Good. Then I too will keep my promise to you. I will write in the morning or in the late evening is all right with you.

Mrs. S.: Fine - love to hear from you.

Good. I like your friendly attitude. Somehow I have to change my mind about Euenza people.

Mrs.S.: I don't know how you have thought - but I like you.

Frank to a fault. Well, that is fine. Let's keep it that way. Somehow I am apt to feel that you could be hiding a motive yet Affa says that is not so. I am hard to convince. But I do like your way of expression and we hope to keep on in the manner we have started. There are many more instructions to be given to you and in due time I am sure we will meet. Affa has shown me a picture of you. He says once in a while he catches you as you look into a mirror. Now I will go. Lots of love from Lll L ll - PONNAR.

%.%) 5.50 a.m. June 13, 1954

L ll L ll ~ ||||| 16°s. Lat., 133° west longitude.
Good morning to you. Ponnar speaking.

Mrs.S.: Goodmorning.

4.

Did I detone too soon. It was very close to your rising time so I signalled -

Mrs.S.: I think it is a good idea to get up on time.

As long as I did not disturb you I ~~was~~ ^{have been} wondering how well you were receiving my signal.

Mrs.S.: To tell you the truth it awakened me this morning.

Oh, then it does work very well indeed.

Mrs.S.: Yes.

Are'nt you going to talk to me also?

Mrs.S.: What planet do you come from?

I am from the planet Hatonn. I am a very interested person in your Euenza also.

Mrs.S.: That's very good.

I really don't know what to say to you unless I ask questions.

Mrs.S.: Most men love to talk.

I believe you are being prejudiced in your ideas of men. In my experience I have found it hard to arrive at the last word with women.

Mrs.S.: Just wondering what you were like - real & human -

And so early in the morning.

Mrs.S.: I am speechless.

I can see you do have a way of letting me know how to arrive at the best end of an argument.

Mrs.S.: Did you really have something important to write this morning?

Yes, I really did. I suppose we are very independent people in your view of affairs as they have taken place in your life during these past few weeks.

Mrs. S.: No comment.

This is an important mission as Affa has so aptly told you by now. We have been unfortunate in our contacts before. We have succeeded well in making them

yet your Buensa people seem to turn greedy and cash in on our efforts. We do not want this. You were recommended to us by your many friends and teachers on the unembodied side of life - they told us of your sincerity and trust. We only hope in our earnestness to contact and acquire your services that we have (not?) been a little rough on your nervous system. We did not know how much exactly you could stand to be accelerated but we did have a very good idea. I am sure you know by now why you were given into Affa's charge.

Mrs.S.: Yes.

He is one of our most trusted men in the Associations. In the greater work it was decided that Affa was the ideal man and that is how it all came about. We did not anticipate your fears until the first time you answered our signal. We could tell by your impulse device that you would be a very sensitive person hence we felt sure you would be afraid of us for a while. Now that you are quite well established into our service it is time for you to receive instructions and become more acquainted with our work.

Mrs.S.: I'm glad you trust me - rest assured I will not cash in any confidential papers.

That is what I am glad to hear you say or rather write. Now, I will let you go.

Mrs.S.: Wait - I got my dates mixed - the wedding isn't until next Sunday - so I'll be around any time -

How could you get that mixed-up?

Mrs.S.: It is not my wedding. I've been very busy with many other dates in mind. I realize my brain is rather scattered.

Oh well -

Mrs.S.: I know what you were planning to say.

Sorry. I am, really. Since you are one of our crew I should give you a fellow's regard, shouldn't I?

Mrs.S.: Not exactly.

Yes, I can see that I must be on my best thinking in order to keep you in line.

Mrs.S.: Have you heard from Affa?

No, he is at home now. I believe he loves his family of girls very much. They are very nice daughters.

Mrs.S.: Are you married?

Yes, I gathered you would think so by my remarks in jest.

Mrs.S.: Yes.

I somehow always wonder if I wouldn't like the things you don't say better.

Mrs.S.: I'll think of something some day. I am a bit amazed at your way of speaking - I had thought you were more serious in nature.

I am, usually, but I need to keep the contact and I really cannot think of anything to tell you.

Mrs.S.: Tell me about your homeland.

Halonn (or Hatonn) is not a very large planet but it is very beautiful. We have many varieties of birds and flowers. We sing a lot and do group dancing. We love our Creative Spirit and work in accordance with the Divine Plan. We raise fruits and vegetables and keep our trees beautiful. I love my wife and we have three children - one girls and two boys. The boys are twins. They are around your daughter's age. The girl is very much younger. We love our Sunday afternoons together. That is why I am a bit homesick around this time and want to talk to someone out there in the sunshine.

Mrs.S.: It isn't very sunny here today - it may clear up later.

How is it?

Mrs.S.: Looks like rain.

Affa has the advantage of seeing and hearing your Euenza.

Mrs.S.: Yes.

I won't keep you here any longer and as long as my

signal is so well established I can settle on a more regular schedule of writing. I believe we can become good friends and get some fun out of the contact. I do not wish you to misconstrue my intentions as I have very much faith in you and am growing daily into the conviction that all will be well as long as we have respect for each other's wishes. I do not wish to make you angry or arouse any false suspicions so with the best of luck and a successful contact, love to you from L 11, PONNAR.

2.25 p.m. June 13, 1954

L 11 L 11

Ponnar speaking. You are very prompt.

Good. It will do as long as I can attract your attention with it at any time. We want to give you a few instructions as to what we want you to do when we get ready to land en masse. We will let you know in time so that you can plan accordingly, so that you can sit by for any or all signals from us both, L 11 and M 4. We hope that meets with your approval

Mrs.S.: Yes, I will do my utmost to assist you.

Good. We also wish that you try to clear your mind of all doubts and put your faith in us above anything of a contrary nature.

Mrs.S.: I'll try.

Good. The reason for this is obvious and I am sure that you know why as Affa has talked at length of your beliefs.

Mrs.S.: Oh! (surprised)

Oh, surprised. Not at all.

Mrs.S.: Is this a test - L 11? (He waited a long time)

Mrs. Swan's note: (I had planned in my mind to find out if he could read my thoughts. My thought was: I can read what you are thinking so I'm sure you can read what I'm thinking. Affa has sensed that I'd find out and would warn him in time.)

8.

I cannot tell. I am sure you are jesting.

Mrs.Swan's note:("I finished as usual")

You are very clever. I did not intend to do this.

Mrs.S.: I'm caught - beaten. My plan is out, -Affa warned you - I do get your thought - Affa did not believe you could reach mine or else he fibbed me.

He was afraid you would refuse to become my contact, also if you were afraid I would read your thought.

Mrs.S.: I suspected this.

Yes, you are very keen and we love you for your sensitivity. We thought if it was a secret to us you would be happier.

Mrs.S.: It doesn't matter - he must not underestimate my intelligence.

I really get a big laugh out of this and I am sure he will when he gets to know of this. I believe he has used this term before himself to you.

Mrs.S.: Yes.

That is fine. I am glad you look upon this in good humor. Somehow we depend on you more and more in our plans. I do hope you will continue.

Mrs.S.: Of course I will. I believe you are doing a wonderful service to our world ~~max~~ and its creatures upon it. I am speaking in deadly earnest.

Of course you are. I feel you are conscientious and we are ready to put our faith in you. Now I will let you go. Lots of love and fun to come, L 11 PONNAR, signing off.

9.05 p.m. June 13, 1954

L 11 L 11 PONNAR speaking. Good evening. We are very sorry to have deceived you. Now you know that you do not have to write answers to me, so I will write to you. I am going to regard you as my contact the same as Affa has in the past as you are also his contact. We are very much agreed that this is the best way to avail ourselves

of an Euenza contact in such case that we should need to use you. I am sure you understand the situation between Affa and myself in all respects. We trust you and respect you and your wishes. We did not realize that you had developed so fast or that you would resent our plans for you. We only meant to keep you from becoming alarmed. Now that your keen sense of perception has spotted our plot to protect you from fear, I feel we should apologize to you.

Mrs.S.: I accept. Thank you.

You have a very fine way of being perfectly honest with us. It was unbelievable to us that an Euenza person could be like yourself. We are grateful to you and I guess that is about all I can think of at the time. Do not be too firm with Affa. He is a very fine man and I am sure he did not realize what he was doing. He is usually one step ahead in anticipating the moves ahead and how people will react to his plans. You have proved an interesting subject as we believe we must be absolutely frank from now on. We do not wish to upset you again.

Mrs.Swan's note: "I saw him - questioned to make sure."

Yes, I was so concerned that I guess I must have projected my thought form to you. Yes. Good. That is good to know. I am going to the Tribunal Tuesday. Will let you know when I leave. Since you are my contact also I will regard you in the same manner of respect as Affa as to when I leave the ship and when I return. We will be gone for two days. In the meantime one of my men may write to you and give locations. I will let him write before I go so that you may get acquainted with him. He is my time-keeper in the same capacity as is to Affa. His name is POMNAR - Yes, that is correct. Now I will let you go back to your family. Just a moment: we do not see you unless we do concentrate and Affa does have a technical device that gives him your sight and hearing. You have been correct in finding this out for yourself. Good, I am really quite friendly. Love from L 11
POMNAR

5.50 a/m/ June 14, 1954

L 11 L 11 POMNAR. Yes,yes. That will be fine.Good.Yes,goodbye -

Mrs.S.: (I explained to him that I had to get breakfast at this time and would signal back later.)

10.

7.23 a.m. June 14, 1954

OEEU → ——— M4 M4 ||||| 49° North latitude
1190 west longitude

Good morning. I have come to write to you to let you know when I am going to the moon Tribunal. I am leaving M4 in the morning and will be back around midnight Wednesday. If all goes well. In the event that I do not return then I will let you know, as I can as easily reach you from there as from my ship, M4. In my absence I will leave *call* to give you the ship's location. This is a note to Mrs. Knowles - Please do not publicize this correspondence yet - I am not prepared to cope with your reporters' type of advertising and in due respect for the contact I believe far better to wait until we are definite in our plans and I must get the view of the Association before I go ahead any further. I appreciate your endeavors very much. Love to you all, AFFA.

OEEU → ——— 7.30 a.m. June 14 L 11 L 11

L 11 L 11 - ||||| - 16° south latitude 113° west longitude

Yes, PONNAR. Yes. Well. How are you this morning.

Mrs. S.: Fine.

That is very good. I like to hear that. Now I will tell you that I am leaving in the morning and will be back Wednesday evening sometime. I will have HOMNAR write for you in my stead. He is a very fine person. You will like him I am sure. Now, I will let him take over -

OEEU → ——— L 11 L 11 HOMNAR speaking from L 11 L 11

Good. I receive you very plainly. I think we can manage very well. I shall write tomorrow at your convenience.

Mrs. S.: I can write at 7.30 a.m.

That will be fine. I will try to detone at that time. I will not keep you writing so will turn this over to PONNAR. So long for now. HOMNAR

That is all for now. Love to you from L 11-PONNAR.

June 14, 3:15 P. M.

O E E U  ----Lll L ll - Ponnar.

Good Afternoon. We tald again--You do not seem to be very effervesant--

(I'm tired--been working hard today*)

That is too bad. I mean that you are tired. I was testing our detone
did it work-- (Yes)

I tried several times--

(It isn't loud enough and Dawnalyn has been playing the radio. I'm
sorry I did not hear it.)

That is understandable. I am not impatient. I merely want to know
whether you hear me at all times. I must make sure.

(I understand)

That is good, I do not need you now. Why don't you take a nap for a
while--We all have to fold up once in a while. Now I will sign off.

Love from L Li

Ponnar.

June 14 6:08 P. M.

O E E U  ---- L ll L ll -- Ponnar.

Yes, I do know what I want-- Did you hear my signal-- (yes)

Good. I am going to remedy that as soon as possible. That is all right I know that I have not as yet any specific schedule of writing. I like to know whether or not I can ~~xxxxx~~ receive you or contact you at any time or place. Tell me, do you hear it louder before or after writing-- (after, is louder)

Somehow I must find out why-I am not such a bad fellow after you get to know me. You are not sure how you can manage to write for contact work for two Space Ships--Our detones will be the same so you do not need to designate, just answer and the right one will be on the other end of the sending magnetic waves to you-- That could never be, We do not get our wave lengths mixed up-- The difference in wave lengths or waves of projection is the reason Affa reaches you so easily and I have an uncertain time of it as yet. When you have received them enough times, then they will adjust themselves for your reception. I want you to understand my point of view. I can see that the nap brought back some of the sense of humor. I believe you were having a bit of fun but I really do want you to understand-- Good, I am sure we can get along fine.

(I'm going out for the evening on Civil Defense work)

Good, I will not try again--That try at oral contact was all right, but it is not recommended for contact work--

(I understand that, but the signal did not stop after you were through writing.)

I will forgive you this time. I understand perfectly well why you did this-- I am not going to make any demands of your time except at such time as I will forewarn you that you may become prepared. (Thank you) Now I will go on with my work and when I get back from the Moon Tribunal I will know what we are planning to do and advise you accordingly. We

Page 2.

will also set up a schedule of writing and that will alleviate the task for you and give you a more uniform routine.

(I am not dissatisfied--The signal is weak and later loud--it confuses me a bit, I'll let you know were and when I go out at all times.)

Good, that will be just fine. Perhaps in this way we will be more sure of our contact--You have other evenings by your thoughts. Affa says you are a busy lady withoutside activites. That is fine and we are proud of our contacts accomplishments. More power and happiness in your service to mankind. To serve is to live. Life without service is dead. Go on and on until you feel within your soul that you have donw your best. That is the only way to true achievements on this Universalscale of endeavor. Now I will go. Happy Evening to you. Love from L 11, Ponnar.

June 14--10:15 P. M.

OEEU  ---- Lll Lll- Ponnar. Good Evening, You are home. Good.

Did you have a good time?

(Fair-- I worked serving at Civilian Defense--food you know)

Oh, they eat at this affair--

(Men get hungry)

Oh, I get it. How many men did you serve--

(There were 5 of us ladies and we served around 50 -60 men and 2 nurses)

Do you usually do this at these times--

(Yes, I'm Co-chairman)

What other organizations do you serve--

(Sec- Extension work, cooking, sewing, crafts, Girl Scouts, I have a Senior Troop- Pres. of Girl Scout Leaders Assn. Garden Club- School Board member, A small Animal Welfare Club, W C T U Eastern Star, Sing in the choir at church when I go- PTA.)

Do you take an active part in all of these--

(Yes, I also work on various Comm.)

Good, Keep on. I will not try to write when you are busy--

(I will let you know when I have a date to meet)

Good. There are many times when it will be necessary in the future.

Can you miss any of these if it is absolutely necessary--

(Yes, I can if I know in time to have some one take my place.)

That is fine. We do not wish to take your time away from you, but we also need to contact you. I hope you understand our position in this--

(Yes, I have offered my services to God, and if you are working in His best interests I will abide by my promise.)

You overwhelm me in this. I really did not know that you did this.

Altho you were recommended by your Spirit friends, I failed to get

the true meaning of the offer. In that case I am deeply honored that

you are willing to serve me in my work. I believe Affa mentioned this

Page 2

but I did not fully realize the true import of the conditions under which you are now serving. Is that the reason you serve so many organizations in your town--

(Yes, I believed I had to prove what I was saying, so I reached out in this direction)

Now I am beginning to understand why you are so constant and have tolerated the strict censorship that Affa has inflicted upon you--

(I do not call this an infliction outside of boring him with my idiotic thinking it has done me good to think before I give vent to emotional outbursts)

I see what you mean--You really want to do this for us and I was under the impression you were sort of urged into this organization--

(No, I was plunged into this work and frankly I was frightened-- Spiritual work would not have frightened me but unknown people can be good or bad-- I fear hypnosis and Black Magic, only humans can exercise this and the conditions around this was unknown to me)

I see. Somehow I don't know what to say except to try to reassure you that we are not workers of any Black Art--

(I am sure of that now-- after seeking God's intuitive solace I felt no wrong in connection with this-- If I had I would sacrifice my good left ear)

I really don't know how to thank you enough in this--No, I did not think you were doing this for thrills but I did not realize that you were so aware of so many Spiritual facts either. Now I will go and believe me I am ever thankful,

Love from Lll,

Ponnar.

5:30 A. M. June 15

OEEU /  **--- M4 M4 llllllll 49 N. Latitude 139 W. Longitude--
Good Morning This is a rainy one I would guess by the sound on your windows. Too bad--Now I must be on my way to the Tribunal-- I will be back to-morrow at around seven o'clock. In the morning Call will write in my stead but she will not write again to-day as I know you are going to be busy to-day and until mid-night -- That is all right Call can write for me if there is any thing you should know earlier in the day. Have a good time in the morning and I am sure you can alleviate some of the young woman's worries. Goodbye for now-- (wish you luck and a lot of success at the Tribunal)

Thank you, I will remember that I have this with me when I arrive there,

Lots of love as ever, Affa.

6:18 A. M. June 15

OEEU /  ---- Lll Lll- lllllllllllllllllllllllll

17 S. Latitude 129 W. Longitude--Ponnar Speaking.

Good Morning. I won't be long--Good-- I am leaving within a few minutes so I thought I'd write myself, if you can spare the time this ~~morning~~ A. M. Good-- Ponnar will write in the morning and as you are going out this evening we will let you have the rest of the day off-- Aren't we being generous-- Now I must be going.

(Good luck and a successful meeting at the Tribunal)

Thank you, you are very kind. Now I'll be gone, Love from Lll--

Ponnar.

12:30 P.M. June 18

OEEU  L11 L11 111111111111111111111111- 17 S.Latitude
117 W. longitude Ponnar speaking

(Have you been waiting?)

No, Affa called me and said you had company. Now, how are you?

(Good)

That is good. We will not tire you out with our tryouts again.

We feel our detone system is not perfect but for practical purposes I believe we can get along as long as you can recognize it.

(Yes, I recognize it.)

Good, we will not tamper with wave lengths any more. We did not realize that we were wearing you down.

So much for that. Next week we will be going back to the Moon Base again. You cannot make a good speller out of me.

(perhaps if we try__ I'm not perfect either.)

Now that is an admission I never dreamed would ever be coming from a woman.

(I slipped up.)

How do you write a laugh?

(Ha! Ha!)

I will remember this.

We will have our instructions__ You confuse me.

(I shouldn't have laughed. It did confuse him.)

(Sorry)

Next week we will go to the Moon Base for instructions. Then we can pass some of them on to you and our good friends, Mr. and Mrs. Knowles. Now we are just waiting for further commitments. We have been watching your West Coast line. There are disturbances bearing up from the ocean floor. I would suspect a Tidal

Wave__a very great one. We are doing all we can to alleviate the magnetic pressures contained in the strata beneath islands and along the shelf rock. I wish we could do more to help. All we can do is to sit by and balance all we can for this disturbance. Many centuries ago these were lands for grazing and people lived there. By the decay of populations, the Earth loses its rightful balance and many of our countries submerge beneath the accustomed level, while other sections are pushed upward, thus throwing all of the surfaces into a confusing that in turn turns the Earth so that the poles become changed. Many planets have been destroyed by this action. Many people worry about their planets growing too old to support life but usually that is not the case. Most populations degenerate and in so doing the decline of the nation and finally the world at large. This can at times change the entire Universe. Yes, whole universes have been destroyed. As you know there are many steps for a human race. Some climb them correctly, while others falter and step back. It is the backward steps that deter races from making a life worth living. Then the whole structure falls. What a mess. Ha! Ha!

(No, I think this is very interesting really.)

Good, I did not want to stop anyway. You have many nations that are standing still. They stagnate and then evil forces start in to take over. We can see this taking place. You have many remnants of retarded races on your planet. Instead of rearing their head and developing as they should, they settle back for others to help them while they rot away from within. If those people could only be made to realize how much there could be in store for them, how wonderful would be the awakening. Now that there isn't anything you can do about it I may as well be quiet. But really it is a shame unto anyone not to look for their God

and build forward and upward. Life can never go on until we realize that fact. Many of your own people are like that but there is still there. Now I will go until tomorrow. Love from L11,

Ponnar

If we can then the heaviest of the disturbances will be eliminated.
We wish we could do more for your planet but that is the way it is--
I believe I do not have anything further to report. Thanks for standing
by, Lots of love from Lll-- They feel much safer this way, Love,

Ponnar.

June 21 7:46 A. M.

ORRU  ---- Lll Lll -22 cycles 17 S. Latitude 119 W. Longitude.

Now how are you this morning--(Fine-]

That is all right it is faster this way. I wonder I did not think of
counting cycles before. Now--Are you going to be ready to standby at
eight o'clock-- (Yes) Good. We are very much pleased with results
yesterday. They are quieted for a while at least- We will be leaving
around noon for the Moon Base Tribunal. This time instructions will be
forthcoming-- Some of these will be of a secret nature. So be careful
what you say to others if at any time you should perceive of some that
you are not told of --We have a suspicion that you are very keen on
these matters. So if you should reach out minds please keep it respect-
fully to yourself-(I will do so -yes) Good, and another thing, do not
worry about things to come as we cannot but estimate what they will be.
Only the Creative Spirit can tell the time or place. So keep your peace
and work with us, we will keep you sufficiently informed so that you
will be safe at all times as our contact we have full responsibility of
your best interests and safety. Affa will always be within reach of you
and all is very well cared for in your behalf. Time is drawing close
Now I will stop writing as I have a few more details to attend to before
the Sons leave earthward. Please standby at 8 O'clock.

Love from all of us, Ponnar.

12:00 Noon, June 22.

OEEU  ---- L11 L11- 22cycles of Time 17 S. Latitude

119 W. Longitude-- Homnar.

How do you do today. Good. We are proving to do some good here but we do not know for how long. There is still much weakness in the fault lines of Euenza and the disturbances set in motion are hard to quiet. The spot most likely to give way is in the deepest part of the ocean floor, at the outer reefs in the Pacific directly beneath where we are located. If this should upheave the Tidal waves would be émmence, doing much ~~xxxxx~~ destruction on land as well as on the islands nearby. If it should start to crack up it probably would work northward toward where Affa's ship is located. That also is a very disturbing situation where ^{he} is working. We wish we could have more assistance as you people could do much to alleviate the pressure. I am sure if Euenza could be made to realize what danger there is to their planet they would assist us. But that is as it is and we can only hope to do the best we can to preserve balance as much as we can without that assistance. Your people may wonder why we care so much. I will tell you. We care because if your planet should explode from within, many asteriods would be flung into space and wreck havoc with in the Universe. Every planet would lose its equilibriam and it would take a long time to establish balance and rythm again. Also many creations would be lost and God's handiwork would be ruined. We can preserve the planet to the extent of keeping it intact, but the changes that will take place will take many lives and destroy much evolved nature, including animals, birds, life and other as well. Our earnest prayer is that the least we ask for is that the nations stop bombing and causing explosions to occur-- If that refraining attitude could be practiced we could do very much more than we are able to under the present conditions. Somehow we hope to reach the people of Euenza before 1956 as this is the year set as the beginnings of the earth's changes. You will find these things spoken of in your Holy Bible, Book of Daniel

Many secrets have been lost that could induce you to become alarmed,
So we will do our best to convince you before it is too late, Now
I will sign off, Love from Lll -Homnar.

12:00 Noon June 23

OEEU LllLll 22 Cycles 17 S. Latitude 123 W. Longitude

Homnar How do you do today? Not very cheery today.

(My daughter is ill today.)

I am sad to hear that. That is very very sad. Oh, I am in great
spirits today. I feel overwhelmingly good today as we feel now
the breaking away of the ocean floor is under control. Yes, we
feel very relieved ~~today~~ at this (telephone rang) No ans.

(sorry)

Not at all. Now I will relate to you something that you should
know of things to come. (my own confusion) Yes No This is begin-
ning to look ~~as~~ like I could not make up my own mind. Some of
the fault lines run parallel with the Latitude lines around the
earth while others run up and down as the longitude lines do.
That can cause a vast breakage in the contour of the earth's sur-
face where the fault lines meet or converge will be of such force
as to hurl much of the surface outward as the inner pressures that
build up will find an easy exit and hurtle tons of molten earth
material upwards. Much in the process of disturbance will lose
its polarity and these will become asteroids that can either hurtle
through space or cleave together in belts and circle the earth
with no intent but to stay in its orbit or field of force, thus
retarding its restoration of balance.

The time is near at hand when we shall all see these changes taking
place in the Euzza due to continued explosions upon the surface of
the Euzza, thus weakening topmost structures that seal in the mag-

netic forces that heat and bind together the form of the Eunza itself. Some of this escapes and sets up huge vortexes that can whirl a spaceship such as ours. When this occurs we have to send out large volumes of force in order to bridge these danger points. After this has been done we try to assure ourselves that it will help reduce its velocity which we find by our remote control devices by testing. Sometimes we find this not the case and we have to stay in one place quite a long time in order to reduce this velocity. The same thing occurs when the true spiritual atmosphere is destroyed by sin and greed. Your H-bombs also burn out much atmospheric balance then we have this same effect except in the reverse motion. These cause such phenomena as tornados, cyclones and hurricane winds. Much of the wind storms around your Equatorial districts are caused by the clock-wise and counter clock-wise disposition of air currents. When these clash or come together in heavy winds and electrical storms occur. This can be prevented if everyone lived in peace and set about restoring balance in living in raising proper vegetables for the proper amounts used each year. If nature could assert herself balance could be restored without very much effort on man's part except to dress and till the soil in accordance to the supply wished to produce. The percentage is huge in man's favor if he would recognize this fact in nature's great laws. Now I will sign off. Love from Lll,

Homnar

M4 M4 8 Cycles 49 N.Latitude 149 W. Longitude

Affa Now, I'm not sure what to tell you folks at this time, as we are not fully convinced that it would do any good to try to contact your government further, due to the inactivity in regard to your past requests. This much you can rest assured, we are going on with our work and hope in some small way that you people of the earth will see your way clear to stop bombing and try to get together in prayer for the salvation of your planet. We are duty bound to God, our creative spirit, to continue to save life wherever we may find that life which needs our protection. Your planet is one such that needs to have a chance of preservation. With my contact on earth as your hostage, so to speak, I will do all in my power to save and preserve all that I can possibly save. We can keep the planet in tact but for the shape of things to come I cannot promise any further. You have little dreamed nor can you realize the things that are ahead. In days to come there will be such suffering, fear and anguish that those who are saved will wish themselves dead. I do not wish to express alarm as that is not my intent. But we do know that the time is short and much must be done.

Mr. and Mrs. Knowles, I wish to express our thanks to you and in the near future I am sure I will have some instructions for you. But at present there are none. However, keep on with your plans as we will never ask of you anything that will disrupt any of your normal plans of living.

The Tribunal meeting was a success except for a few embarrassing moments on my part which soon passed and was well disposed of. We are not going to think about a mass landing at this time as we

have decided to listen to your advice. Perhaps we can come to an agreement before such a time as we deem it necessary to do so. As far as I know now, it is not necessary to land for at least a month or so as we have many of the disturbances under control momentarily. We cannot guarantee how long we can keep it thus.

I am sure if you people could be made to realize the danger the planet is in you would all throw away your weapons of destruction and fall on your knees with weeping.

But be as it is we will pray for you and keep on mending what you destroy. It is a thankless job but as ~~least~~ I have stated before Universal Workers do not question why, they just keep on in the duty assigned to them from the Divine Plan of survival and protection. Now I will sign off. Love as ever, Affa

8:02 A.M. June 25

OEEU M4M4 8 Cycles 49 N. Latitude 156 W. Longitude
Affa I promised to describe our space ship more fully. First off, let us get an idea of the immensity of this ship. It is 150 miles from point of one crescent to the other point and 100 miles broad at its deepest point. This in itself constitutes a small nation. Instead of a salable, it is formed of mabonite and is circumfranced with this metal 200 miles over the top in order to have the forming of an atmosphere from an artificial sun placed at its highest point. We have fields with brooks and streams that run into a small lake. These are endued with life such as you would find in your own fields and streams in order to have a self created atmosphere. This gives us also gardens and we have animals here, such as horses, cows and dogs and the usual country animals. We also have the insects that balance and harmonize this nature which we have reproduced.

In order to lighten the immense load we have a magnetic device that degravitates from the bottom the amount of pull that is created from the gravity created above. I cannot describe this as well as our technicians but in the end result the weight is dissipated. We have recreational centers and swimming pools here. There are no women on this ship because the nature of the work is for the strong ones. We have to keep in training at all times as the work is most strenuous and the bell flights out in the voidal atmospheres is very hard on the body processes. We keep fit with the usual sports. My favorite sport is fencing. I like swimming and hiking also. Many of the sons box and wrestle with the exception no one ever gets hurt. We do this on a point system only. I also ride horseback and do some target shooting. We have rifles much the same as your own but we use them only for sports of which we have several.

We are well staffed with cooks, caretakers and people who look after the animals welfare. We have many repair men as well as doctors, scientists, etc. People necessary to keep a nation busy with the exception of those who keep the nation balanced and restored. It is almost self supporting as far as foodstuffs are concerned. Those things we lack are flown from the planetary association.

We arrived at assembling this ship by our remote control devices which we attached to sections and then all parts were welded together with the help of bell crews and strong magnetic waves which melt the edges of the sections into one complete globe. I will endeavor to trace out the shape of this ship, M4, if I can sufficiently control the contact's arm enough to get the main idea on paper. Excuse me if I am not an artist but this is about how it looks.

2.

Do you like fish to eat? (Yes) Yes, we eat fish.
How long do your children go to school? (13 years,
and if we have the money they go on to college or
trade school. They start at about 5 years)

If we were to land in a mass formation would
your people go beserk? (I think so in some areas.
Not sure.)

Where do you go when you worship? (I go to the
Congregational Church - sometimes to any church. I
pray and worship in my own secret mind. Many only go
to their own chosen form of worship)

Do the kinds of shoes you wear ever hurt your
feet? (Sometimes - I'm careful that they feel com-
fortable)

Why do you people smoke? (Most think they en-
joy it)

Do not your doctors tell you of the poison in
them? (Yes - a few doctors tell us but people don't
like to listen)

What is the enjoyment? (I guess it must be
the taste of the smoke or the aroma - I have smoked
but somehow I only get a bad taste in my mouth)

That must be great fun.

3.

Do many people get intoxicated? (There many of us who don't drink any intoxicating drinks, but many do. I couldn't give a percentage - possibly one half)

Why do you people marry other wives and husbands while the first ones still live? (Mistaken love - discontent, lack of reliability or responsibility)

Do you not know that this is sin? (I believe it is considered sin by many - others believe in the man-made laws of each state)

Why do you not like the way all people should live? (I don't understand) I mean why do you people not follow the dictates of the Divine Plan? (Many of us try yet many more disregard the laws of God)

In your mind are there many who like the Divine Plan of life? (Yes, I believe so)

Would you, if you were in our places, try to save a population that does not care too much about the Creative Spirit? (Yes, I have prayed for this many times)

Can you love people who don't love you? (Yes, I think I do. I love many people)

Are you afraid of the power of Spirit? (I love the power of Spirit yet I am afraid to disobey the dictates of Truth or Spirit)

4.

Have you many friends? (Quite a few - many friendly acquaintances)

Can you work with the opposite sex of men and feel that you are not being talked about by the females or women? (Yes - and I have worked with men many times)

Do the men molest unprotected women? (Very rarely)

Can you trust anyone on Euenza? (I trust many people)

Many here think the people on Euenza are very stupid. What do you think about this? (Not stupid - self-centered. They think too much about their own problems and many are vain but many have much wisdom)

It is a good thing that you tell me this as I was about ready to give up this work here. Tell me one more fact: How many people are true to their country and how many would care to fight to the end of the world? (I believe the most of us would do this in my country. Many other countries, I believe, would)

Would you try to persuade your Government to let us land and instruct them? (We have already tried)

5.

Can you love all people of the other countries?

(I believe I can. I don't like to know of the suffering that goes on there)

Somehow I believe you and I will think awhile more on this before I decide. (Thank you)

I will ask a few more questions later. This is

P O N N A R

Note:

Following is a message written by Rear Admiral H.B.Knowles, U.S.N. (Ret.) which he asked Mrs. Swan to give to AFFA, whose answer is dated June 6th, 1954.

6.

OEEU  M4 M4 ||||| - 35° west longi-
tude 48° north latitude. We have been moving along with-
out anything serious happening. At this point all is very
well indeed. Now I will answer Mr. Knowles' request:

Dear Mr. Knowles :

Your letter of June 5 read and now being recognized.

No. 1. I believe this is so.

No. 2. (a) Correct.

(b) Correct again.

(c) The cigar-shaped ship size 100 to 200 feet are
not from our Space Ship M4. They are from another Associa-
tion. They are friendly and are working in conjunction with
us. They are like our Motherships.

(d) The rotating light type of disc is used as a con-
ditioner for our magnetic wave lengths. It is possible some-
times to over estimate the amount of magnetic waves necessary.

(e) Fireballs are nothing to become alarmed about.
They are guided by remote control but since they also are
equipped with magnetic eye and feeling devices they can
never come near enough to harm a plane. They do the same
work as discs.

I have pointed out before that the work we do is
replacing wasted or distorted magnetic lanes. These occur

7.

mostly over large cities and defense plant populations seem to carry some of the elements of a disturbing nature. You will find us over many of your battlefields.

I will tell every member of my ship, and that is very many, to signal by code. Rest assured we will do all we can to make you people recognize us. (The code mentioned here is simply the international dot-dash code supplied AFFA by Mrs. Swan)

In a few days we will be having a meeting with L ll and I am sure he will want to do likewise. He has been interested in our developments through our contact. You will find him also most cooperative. We will do our very best to contact you people. We also would like to land with many members at a time to instruct you people. I believe you can save your planet if you could find your way clear to live in Peace and build a satellite that could produce a field of its own magnetic force. In this way balance could be restored. This is the best I can offer at this time. We hope for a successful meeting in the very near future.

A F F A

June 5, 1954

Message to M4 M4 A F F A :

Navy Department has been contacted. No reaction yet received. The following is a resume of our knowledge of your ships to date:

1. Hundreds of sightings have been reported and analysed by our Intelligence people.

2. Types of your ships reported are:

(a) Mother-ships - large, rocket or cigar-shaped, 600 to 1,000 feet long; color silvery; speed 9,000 to 20,000 miles per hour. No violent manoeuvres reported.

(b) Disc-shaped machines of at least three sizes - large discs, 100 feet or more in diameter; medium discs, about 50 feet diameter; small discs, 8 inches to several feet diameter. Color of all discs metallic silver except when showing the effects of over-heating. Speeds, 7,000 to 11,000 miles per hour. Manoeuvres - abrupt turns, climbs and reversals with very swift acceleration.

(c) Rocket or cigar-shaped ships reported at fairly low altitudes; sizes 100 to 200 feet long. Color, metallic silver with a fiery exhaust. Speed, 900 to 1,500 miles per hour. Less violent climbs and turns than discs and no reported reversals.

(Message to M4 M4 A F F A - June 5, 1954)

- (d) A machine sighted at night with red, green, white rotating lights and fixed white beams - may be a rotating disc type. Speed 1000 to 1,500 miles an hour.
- (e) Bright green fireballs reported mainly over New Mexico. They are silent, meteoric speed and travel on straight courses. These have our people greatly worried since they appear to be guided missiles from outer space.

Close analysis shows that most of the space ship sightings occur near large centers of manufacturing and defense areas particularly our atomic plants. This is a cause of vast suspicions and uncertainty among our officials. Tactics used by discs in presence of our aircraft often appear hostile and dangerous to our people. Strict orders have been issued to our pilots to investigate closely all discs seen but not to shoot at them unless hostile intent is shown beyond a doubt. (It should be recognized that we have irresponsible youth in some of our planes, perhaps, just as you have reported about one of your bell pilots warning us.)

Our people believe your ships are from outer space, that they are controlled by superior intelligence but they are not sure what your intentions are. There is a vast curiosity about you but no hostile feeling or intent in this nation. Our people would welcome contact with you but do not know how to do it. Since there is nothing

(Message to M4 M4 A F F A - June 5, 1954)

for you to fear from our aircraft it is suggested that the next time you are near one, you try to stay nearby long enough to signal with a blinking light or radio. You have the dot - dash code and our people can read and answer it.

If you should contact one of our planes by radio or lights it is suggested that you tell them that you have contacts with me, Mr. H.B.Knowles, through Mrs. Frances Swan here in Eliot, Maine. That would really give them something tangible to think about.

It is further believed that your discs are controlled from a mother-ship because no human could stand the heat generated in manoeuvres. That your source of power is magnetism is strongly suspected, but how you do it is unknown. It is believed that you have some metal unknown to us. The following planets are suggested as being your home base: Mars, Venus, Jupiter. The moon seems certain as your advance base and the dark side is suggested as its location. May you succeed in making contacts is my prayer.

H.B.Knowles

my-my-Office HELEN K-

June 6, 1964

1) GHEU---
AFFA-

Good Evening- I am surely glad to meet with you folkes again.

We say we are happy also-

AFFA- I'm sure of that-

1) Herbie- What is office-1 ?

Affa- Office 1 is the chief of the M-4- His ^{NAME} ~~NAME~~ is Ankar-

2) Herbie- After Frances adds that Affa will lead men who come to Earth, Herbie asks again-"When will this be- Some of us wonder if we shall see it--

Affa- I am told it will be soon- I am not sure when that is, but I do hope you folkes will try and live on and beyond that date-

3) Herbie- We can go so far it seems and then something happens again to upset the applecort- Is this something that we should expect at this period?

AFFA- Yes it is-

4) Herbie- I've heard that some space people say no matter how much Earth people strive we cannot bring the perfect condition until you people come help us-

AFFA- Your Bible states that fact when it says "And there was not a man whom the Lord could find that could bring this faith"- all is in a state of perplexity.

5) Adele- Is there anyone on Earth today or will there be who is an incarnation of a great soul of the past (apostle etc.)

AFFA- Yes, there are many- but it is not for them to do as they are on the road to progression of their own souls while you are looking for one to progress a world- This is to be done with more than one person- So we will be bringing enough governors and teachers that many now living will be instructed to do this leading that is required to make the world a better place to live in.

6) Frances speaks of people everywhere speaking in tongues- using language of vowels- like Hawaiian- Could AFFA throw some light on this.

AFFA- No- I'm not sure of the language of tongues- but I would say ~~that~~ that if the Holy Spirit were to speak through you that it would be the language that was inherent in your encesty as that would be the originator of a language- However when one speaks in tongues it is the voice of the self as it is taught- The magnetic sound would lead forth the translation as in the study of Kabbala-

Adele- If this language is not understood what good can it do?

AFPA- The good that it does is that the individual has at least found the true self- (Note) The Holy Ghost is really your true self- It individualizes in people-

3) Adele- The Holy Spirit is called upon to help in wisdom by ~~many~~ people in many churches-

AFPA- The Holy Spirit is the Highest order of the Creative Spirit- It is Creative Spirit in action- Just keep it plain and simple- Spirits do help those they are looking over and their loved ones- Creative Spirit works through the individual when the individual is ready the Holy Ghost takes over- that is the Higher Self of your self-

9) Adele) When we try to remember our past lives, should we raise ourselves in a higher vibration by prayer and meditation or should we ask ourselves/ Higher Self to show us this?

AFPA- You could do it that way- it is far simpler to think about a line of fact which I have given you pertaining to a past life and let the thoughts flow in as when you think about a thing you become that in vibration.

10) Tom/ Is the earth now in the 1080 days period spoken of in the Bible?

AFPA- I don't know- I have tried to figure these but I think things have happened to the earth to throw off the ~~time~~reckoning-

11) Tom Speaking of the many fires we have been having everywhere Is there more oxygen now than was before?

AFPA- I think it is- more fires would indicate that- also lack of magnetism would cause flames to burst forth as in the places of departure there would be a vortex-

12) Herbie speaks of Fate magazine article on Auras- All forms have an aura- Perhaps article was written by an extra terrestrial?

AFPA- I didn't do it, The aura is the astral body of all things- this is the cause and reason for your being- You can strengthen this aura by desire- the electro-magnetic body is interlaced in this aura and we refer to it as the vital body as the power behind all moves of the body and brain- while the Spirit body of man is the One director or the real you-

13) Adele- This astral body(aura) varies in color according to the individual?

AFPA- A perfect person is in a white aura or light pattern -Colors note that some are lacking in development-

- 14) Herbie- After discussions on auras and vibrations and raising themselves in a perfect condition- I wonder about ill people curing themselves-
- AFFA- Right thinking will do that- Cancer and many other forms or illnesses are soul diseases- Soul diseases are parasites that grow onto the organism through the permission of the soul if that soul is ignorant of this, his life has done so.
- 15) Herbie- describes UFO in Argenta ranch area (Fate magazine) 25'-30' in diameter through beams of light on house- house got hot but no fire- This seems an uncalled for display of power.
- AFFA- I'm not sure about these activities- most likely the people the saucers were afraid of the inhabitants of the house and wanted to flush them out into view-
- 16) Tom- I didn't know they were afraid of anyone.
- AFFA- Those little green men are.
- 17) Helen- Speaks of the colored man and his white wife having been hypnotised and examined by UFO occupants- why?
- AFFA- I imagine they were from Mars and they were probably DR's They are still seeking cures for many ailments that you people don't have-
- 18) Herbie- Speaks about Mars- The canals- the Lattalites- and the bulge or canopy covering-
- AFFA- Those Martians are already filled with hot air- they don't need to hold any in on the planet-(air)
- 19) Herbie- asks Affe if he has seen the comic about the moon girl and the Earth's scientists son?
- AFFA² I'm not privileged with that variety of entertainment-
- 20) Tom- That rocket that was shot to the moon- did it go thru the image of the moon?
- Affe² The camera went out because they hit a meteor-
- 21) Tom- Was it going toward the moon or toward the image of the moon
- AFFA- Toward the moon because they were following the ^{curve} image of light - the scientists on Earth know of this but they do not as yet know the image is not where it looks to be in regard to the true positions of the moon
- 22) Helen- And for that reason they will never hit the moon?
- AFFA- They can but I am wondering if another meteor might be attracted to them-

Tom- How is it that the Venus shot didn't attract a meteor?

Affa- That was going outside of the force field of the Earth-
When you are in outer space this can happen but the meteors
are always within the orbit of a planet or moon.

24) Herbie- What's going to happen to all the debris we are sending up?

AFFA- It's all coming back you'll see

25) Adele- Affa, I love you

AFFA- Sh-Sh-Sh-

26) Herbie- I hope I don't always sound as foolish as I do tonight-

AFFA- We all have our moments-
Glad to talk with you-

Love AFFA

27) Herbie- Speaks of pyramids- Theory is that the so called stones
could be plasters which harden- or done by levitation

AFFA- In the days when the black man was supreme on earth, They
knew the secrets of the Universe- they did much in the way
of stone works because they used the power we use in our
Bells to move stone and they used sound tools for cutting-

1.

6.05 p.m. June 7, 1954

OCCU D →

||||| - L 11 L 11 15° south latitude 116° west longitude

Ponnar speaking. Good. We are making very good headway and hope to complete our revolutions very soon. We are going to hold our Tribunal next week. I would like to ask some more questions if I may.

Q. Why do you people not believe that we are real?

A. I think we do believe you are people from another realm outside of our knowledge. Some of your manoeuvres baffle us and we haven't any airborne craft that can move so swiftly.

Q. If we do signal to your aircraft will you people return a friendly signal?

A. Yes, I believe we will.

Q. If we should land in masse on some of your airfields will we be protected from any sign of attempted capture?

A. If you could let us know when and where it could be arranged I am sure. Our government is never belligerent to friendly visitors.

Q. Could you and your good friends Affa tells me of be there in person to introduce us to your official personnel?

A. If it is not too far away from this surrounding area, yes, we would be honored.

Q. Perhaps we can come to conclusion on this. Does your government trust us?

A. I believe so as long as you could prove you are not enemies.

Q. We can do this. How can you make your people meet us?

A. We can send a telegram to Washington direct to our President. I believe he would listen. We can pray that he will.

2.

Q. Good. Try this when you hear from us.

A. How can we be sure you will come?

Q. Yes, I understand your position. If we can all agree upon a founded date and place we will be there. We can fly in formation the day before over your home. Is this proof enough of our surety to come?

A. Yes.

Q. Can you tell us how your personal people will greet us?

A. If Mr. and Mrs. Knowles or myself is there we will extend our hand and make you welcome.

Q. Good. We wish to be completely friends and meet in a cordial manner.

A. It shall be so.

Q. Will the people about you be frightened if we should fly over your home in a large formation?

A. I really don't believe so.

Q. I will tell you how I will look. I will wear a silver frontlet and a silver face protector. I am white skinned like Affa. I will stand by his side.

A. I shall remember.

Q. Good. I think this is all for this time. It has been refreshing to know that people are like yourself on the Euenza. From your television and radio we get some odd notions about you people. How can you enjoy such nonsense?

A. Most of the nonsense is enjoyed by the younger people. I like good music and classical dancing. Many of us do also. Television is comparatively young to us and they have the notion pictures was be active ahead of good behavior.

Q. You would naturally believe any new thing should produce more information and improved entertainment.

A. I think many of us older people believe that also.

Q. Should not the older people sustain the knowledge of the young ones?

A. Yes, they should, but our television companies are materialistic and compete for money rather than for spiritual qualities.

Q. Who has the jurisdiction over this?

A. The companies themselves do unless it becomes profane and I believe we have censors whose jobs it is to look after this.

Q. Do you wish for your daughter to be crazy and stupid to please the companies?

A. No. She is rather quiet. Our schools help toward good behavior also our churches.

Q. Good. There is some restriction on behavior then?

A. Very much. Most people are reserved and relatively polite and considerate.

Q. I certainly am getting a brand new insight in regard to your people.

A. Good. I am very pleased.

Q. I must confess I thought you were on the last road to Hades.

A. Oh, not ~~xxxx~~ so, not yet.

Q. I can see you have a sense of humor. That is good, as we really do want to help you people and I am glad you will be willing to aid us.

A. We will, I am sure.

Q. That is all I care to know at this time. Sincerely,

PONNAR.

M4 M4 11111 48° n. latitude 47 W. long.

Yes. Yes. I am truly grateful to Mr. and Mrs. Knowles and I am most interested in his message to me. I will give this my own

4.

profound thought and I am sure Ponnar is becoming more acquainted in the ways of your people. We will meet next week at our tribunal on the moon-base. There will be many planet representatives there and we will give voice to your needs. Ponnar is most effective at any conference table and after due consideration I am sure he will become more lenient toward our mission. We will try to the utmost to make a mass-landing in our safety and to prove to you people that we do not have any evil intent. In this way you will know that we are friendly indeed. From now on we on M4 M4 will look upon Euenza as a place worth saving and as your fair country as a friend to help serve the needs of mankind throughout the world. Until we inform you otherwise, we will go along with Ponnar's suggestion and fly a small formation over the contact's home the day before the date. I will write her and set the date but the formation will be the proof of our fulfillment to our promise. Now that this is settled we will go on to other things and in due time we will inform you through the contact. Love and regards to all.

A F F A

1.

(Note: These questions and answers were made in the presence of two representatives of Naval Intelligence, Captain John R. Bromley, U.S.N. and Captain Harry W. Baltazzi, U.S.N. at the home of Mrs. Frances Swan in Eliot, Maine, with Admiral and Mrs. Knowles present. Admiral Knowles acted as liaison in this situation)

2 p.m. June 8, 1954

M4 M4 A FF A

Question: Admiral Knowles:

1. You speak about landing en masses or in force - what do you mean?

Ans. We mean to take the entire field.

Q. How many ships and men would be involved?

A. That would be up to you people. We could bring around 5,000. Yes, more if you desire.

Q. Does that mean men or bells?

A. No, that means our bells. Some of our bells carry three or four, some of them carry only one.

Q. How large a landing area would be necessary for the total bells given?

A. You name your field and we will plan likewise in accordance to the number involved.

Q. Are you familiar with the Brunswick Navy Landing Field and the so-called Sanford airport?

A. We can find these if you give us the locations on one of your maps. (If the contact will calm down I will write so that you can read this)

K. "The Sanford field is about 20 miles east of north of this location."

A. I believe that I have passed over this before.

K. "I've been talking with members of the Naval Intelligence Service. We have had a lengthy conference and these representatives have taken the realistic view and doubt strenuously whether there is anything tangible enough for our higher authorities to make plans to meet you."

2.

A. I can see them as well as any of you can through the contact and I am very pleased to make your acquaintance. I understand this very well and I would say this is a fair view.

Q. We've talked over various possible ways of approach. One very logical observation has been made - if you appeared at the Grange Hall last Hallowe'en then you certainly would be able to make such an appearance just as successfully in the near future. It has been suggested that you make such an appearance, that you contact Frances Swan and H.B.Knowles and make yourself known, then we will contact Naval Intelligence in Boston and let them know - they'll be up here to participate in a preliminary conference with you.

A. Some of you people take a lot for granted. This would not be possible at this time. In the near future I could come in one of our bells and land out here by the contact's home. Please keep your planes away - that is all I ask.

Q. Could a landing be made at night when there would be no likelihood of anyone flying around?

so.

A. I believe/I could try next week if that is all right with you as I would be over this area, yes. Why do you not contact me by short wave and have a more direct and convincing answer. I can tune in on any wave length. Just take time to listen for a reply. I am sure I can reach you. I will make a date for any time to contact you by short wave dot-dash system. I will try but as you know some of your planes try to keep us off.

(At this point the question and answer sequence broke down because of some rapid fire exchanges. Previously Affa had stated he was going to a tribunal meeting on the moon next week and the question came up how he could land here if he went to that meeting. There was more talk about frequency, etc and during this period Mrs. Swan was constantly taking down notes from Affa, these notes reading as follows:

Affa; I will try to do this. The tribunal is going to meet next week for several days. I can plan on any day most convenient to you.

5.
3.

If you want a definite frequency, try 405 band length. Our sets are different and our names are different. What is a megacycle? (The Intelligence people suggested several wave lengths and defined a megacycle.) I will remember and have note of this. I can come down to your level if you wish. Name a definite date, I will come near enough in one of our mother-ships. (At this time the Intelligence people suggested 2 p.m. Thursday June 10th, 1954.) Thursday at what time? (2.00 p.m.) That is fine. Listen for me. I will make a long signal then M4 M4 AFFA. I have communicated on this before. A man named Williamson (This is Ric Williamson, Assistant Editor of Seal-craft Chapels, Noblesville, Indiana) Yes, the operator does not want his name revealed but we did this for the man Williamson. He called as I had previously called them when they were operating. I can use any frequency. Please do not underestimate me. I can contact you if you listen. I can tune in on any frequency.

(There was more questioning about an actual landing as had been previously suggested.)

- A. I will try this but I do not understand your government. I represent as large a portion of people as you do and I am sure you would not try to make this demand of your president unescorted.

(It was then suggested that he send an emissary instead of himself.)

- A. I could try to have a personal contact but I also want you to give me some guarantees. I am most interested in meeting you people. If I come alone it will have to be before Mr. and Mrs. Knowles and my contact as that is all the people I can feel sure I can rely on. I feel sure of this. How can I be sure it will be worth while to make this landing? I only want the government to be able to know we help you. I want cooperation. I do understand. I am saving your planet. What more do you want in the way of friendship? When you people are ready to admit us we will teach you our ways and devices. (This was in reply to a general discussion centered around the theory that it might be a great deal easier for us to communicate directly with them if we were provided ~~if~~ with one of their radio sets. At this time it was suggested that there seemed to be vast suspicions on both sides and that little progress could be made unless there was some give-and-take in this matter.)

4.

A. Not really suspicious, but you must realize that these little bell hops are not as easy as they seem.

Q. How long can you stay?

A. I am not sure as I have a job to do also. I can stay for an hour or so.

(At this point the Intelligence people prepared to leave and we thanked Affa for his cooperation in answering questions.)

A. We thank your people very much and I am sure if we do not meet in the very near future I will see them in several months. We are planning to come then anyway.

- - -

loves you and believes in you. He believes he has made more progress than you are inclined to think. Sometimes a tiny seed can grow into a lovely fruit-bearing tree. (Answer: I am glad you feel the way you do. We are wondering what our next step will be.) I believe Affa will let you know how to take the next step. He is a wonderful man. Believe in him, encourage him as he has much to accomplish. (Answer: I am believing him as fast as I can but he works so fast I am not quite settled when something new has been added.) I am not quite sure what you mean but I do know our magnetic knowledge must be very baffling to you. (Answer: Yes, we do not grasp it in its entirety.) That is well as we were a long time perfecting it. You people have not used it as extensively as we have. (Yes, I assumed as much.) I know you are going out. Affa said to make it short. Lots of fun hearing from you and thank you for your time with me. ~~He~~ will be back at prearranged time tomorrow. Sincerely,

P O N N A R

1.48 p.m. June 9, 1954

73° west longitude.

Our progress is very good. Yes, we will try to see if we can get contact with the Boston Navy Department at 2 o'clock as we planned. I hope this works out in our favor as then we can get in touch with the government direct and that way will be more satisfactory than through the contact. It is very hard for you personally to see that this is a form of communication that can be authenticated. I can readily see how hard it will be for them to induce the higher officers to do this. Somehow, I believe these

3.

things can be worked out without too much difficulty. When the wedges are all driven the log usually opens wide. This is what we hope to do. My contact has the name and address of this Williamson whom I have contacted in the past. As usual, there are many angles to work but I feel sure that we can contact them if they send the first signal. We must get some kind of authentic message to them that they can see and understand from real people. We are real people and we do represent a large organization of planets and countries, or nations, as you call them. I do not deem it necessary to approach alone to give them proof of friendliness as we have been sighted for several years and have been known to do no one any harm. We do want to land en masse which will impress your government of our friendliness and the purpose of our approach. We could fool around for years trying to convince ~~us~~ your government we came from space, if only one of us should come at a time. It seems very childish and petty to regard an instrument or gadget as tangible proof of existence of human beings. It is very presumptuous indeed to feel your earth is the only peopled planet. That is all for now. Love as always,

AF F A.

0250 - L11 L11(8 p.m.) June 9, 1954

Good evening. You are a busy one. We are always glad to communicate with you. (Ans. I am glad to hear from you.) Good. I have a few more questions to ask you. How do you heat your homes? (Ans. We heat our homes with furnaces.

We burn coal or wood and oil. The furnaces are piped to each room with hot air or hot steam.) Good. How do you plan your food supply for the year? (Ans. Food is canned, dried and frozen in large factories or packing houses when the fruit and vegetables are seasonable. It is sold to stores, and we buy it as we need it.) How do you find any time to go to the - - -I don't know what to call it in your language? (Ans. What is it like?) We travel for miles to make a trip to one of our Temples of Wisdom. We do this after a harvest in the end of the harvesting of fruits and vegetables. (Ans. There are some religions in India and Mohammedism religion where people make pilgrimages. Also Catholics from all ~~the~~ over the world go to the Vatican, I believe, on certain holy year observances.) Not all people believe the same in your Euenza. (Ans. No, there are many different forms of worship in the world. Other religions have conferences and we send delegates from our churches to attend.) Then there is a similar kind of pilgrimage as you call it in your world. (Ans. Yes) How do you account for the number of people. (Ans. In our country we take a door-to-door census of all people and domestic animals every ten years.) Why do you people have last names alike? (Ans. Last names are family names. Every male perpetuates the family name.) Do you ever add numbers to names? (Ans. Only if they are named exactly like their predecessor, like George Adams, 3rd, if there have been two previous as father and grandfather with the same name.) Have you ever liked anyone who is - - -I don't know what this is in your language. (Ans. What are they like?) One who likes material things more than the spiritual things? (Ans.

Ans. Materialists. We have many in varying degrees and I like them. I don't think they realize they are putting material things ahead of spiritual qualities. They are usually generous.) What a mixed-up way to think. (Ans. Yes, I guess most of us are mixed up as to what is the correct way to think) How do you know you are mixed up if you don't know the correct procedure of thought? (Ans. A feeling of frustration exists.) Do you not know how to eliminate this? (Ans. I do this through secret prayer and meditation, but this does not entirely remove doubt.) Doubt is one of our worst enemies. When we doubt we lose a lot of beauty and faith that would be exalted otherwise. To remove doubt one must believe in what comes his or her way as a part of the Divine Plan inviting him or her to do with it the very utmost to the betterment of humanity. When one has that faith, one can go far on the road to pure happiness. Why do you doubt when you have a faith in God? God would never create a beautiful hope and let it become anything but the very best for His children. (Ans. I do not doubt God. Our Bible continually warns us against false prophets.) I can't understand why you do have doubts in this light but false prophets can never do miracles nor can they ever do all the marvellous things they promise. If the thing is done, then no false prophet has ever done this. (Ans. I have never thought of this in just this way. Thank you.) I am glad to enlighten you. Do you ever go to the trades where they meet and display products? (Yes, we have trade shows and fairs.) How many times a year do you people have a sing festival? (Ans. Once in a while

6.

a town has a singing festival in summer, but very seldom. I have been to two or three when I was younger.) It is great enjoyment and many people can find great happiness in doing this. (Ans. We thought so at the few times we went. Not many do this nowadays.) Do you have a great time in the beginning of the Spring when the tree saps flow? (What kind of a time?) We bore the tree, catch the sap and boil it down to a thickened substance to eat on our bread like honey. (Yes, we call it maple syrup. When I lived on the farm we did this and boiled it in great pans over large pits of fire.) Yes, that is like we do. It is fun, don't you think? (Ans. Very much. I love to watch the sparks fly upward at night and smell the smoke and sweet sappy smell.) Great. How many trees did you bore on your farm? (Ans. Around thirty or forty , not too many.) That was enough to know how much fun it is. (Ans.Yes.) I will let you go now. It was fun writing. Lots of fun and happiness to you,

Sincerely,

P O N N A R

OEEU

M4 M4 (|||||) 48°

June 10 - 5.25 a.m.
n.latitude 87 w.Long.

Today is the day we will try to contact your navy department. Pray for me and I am sure we can succeed in getting this message of contact into being. Sometimes we can be mistaken in our attempts but that has happened many times before so I am used to it in this job. I need your help and prayers, your encouragement in all things, so keep on with the contacts and in due time we shall see the harvest reap. Mr. and Mrs. Knowles have been very wonderful in their aid and ability to understand our position in all matters pertaining to this work. As Mr. Knowles likes to talk with the others at times, I will have one of them come in and write a bit, so I will sign off. Love and lots of it to you all,

A F F A

A L G M A R - Good morning to you. I had not expected to write but Affa said Mr. Knowles liked to hear from me so I will endeavor to give him a bit of information in regard to our sending sets. We realize that you must have a standard wave length for purpose of delineation and conformity to code and regional rules and regulations. Our governments also do this. You people seem to take us as very strange indeed. Please believe me, we also have the same problems as you in practically every department of living. Our space ship is equipped with a master set that can reach any planet. We also have difficulty with wave lengths in regard to many, I would say all, planets. Our master set can escape all restrictive code signals with its capacity to range in any direction any wave length ever controlled by mankind. This master set is magnetically controlled, giving it an elasticity of con-

trol and projection. It works on the fourth dimension plane so it is unlimited in its performance. Can you not see that we can signal you on any set ever devised by you? Affa is impatient when people question him too much, so he wished to further this information to you. I believe we could get along fine with you people. Affa wants to gain recognition from your government on terms they can believe. He also does not want to waste too much time. There is much to be done and the time is short. 1956 is the time set for completion. I hope you can understand our position. We come in the role of peacemakers forever.

A L O M A R

CCP
Wednesday, July 28th, 1954.

2 P.M.

Mr. & Mrs. Knowles,
Mr. & Mrs. Smith
Mrs. Swan
and daughter.

OEEU ---M 4 -- M 4 AFFA

We meet again.

Mr. Smith expressed appreciation and queried the protocol.

A. Mine is the same as yours.

Q. 1. Is there anything Affa could ask me on which I could give him information.

A. My question of anyone who is willing to aid us seems at this date to be an imposition upon the individual. My only request is that the people of the entire world learn the truth about what is to come. I do not expect this of any one individual.

Q. 2. What would Affa like me to do?

A. Have your Government tell its people to get down on their knees and pray as they have never prayed before. This earth is really going to end as stated in the Holy Bible around the year 1956. Have all Governments tell their people over television, radio or whatever means it has at its disposal. One government can tell another and the world could know within two weeks if they got busy.

Q. 3. First job is to convince a government that this is true. I know my government and I know it is going to be tough.

A. We understand this so do not feel that we expect you to do this. We have tried many times before. Do not blame yourself as we will never blame you but do appreciate your consideration.

Q. 4. I would like to do something tangible and I think that if Affa and his people could assist us in some way we might be able to impress our government with this situation.

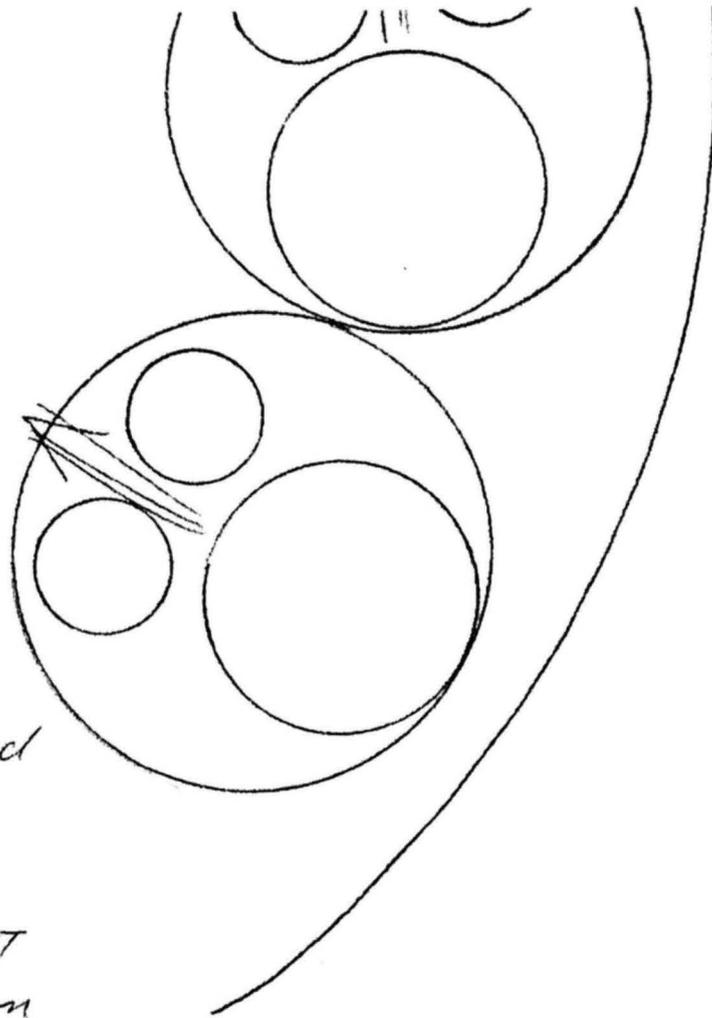

A. We have orders to go over every nation and make them aware of us in no uncertain manner in the latter part of August. Just keep on as you are and if won't take too long after that to convince some of them at least.

Q. 5. I am afraid Affa under estimates the stupidity of our people. They would gaze at your visit in the sky and remark on its wonder but as for doing anything about it, knowing our government people, it would be very difficult to convince them of the true import of this entire thing. Does Affa know how we can overcome this inertia on the part of these government people.

A. No, I am at a loss of instruction in this respect. Do not worry as it is written many will be lost and many will be saved. That is how it will be but many more could make themselves ready and not have to endure so much hardships.

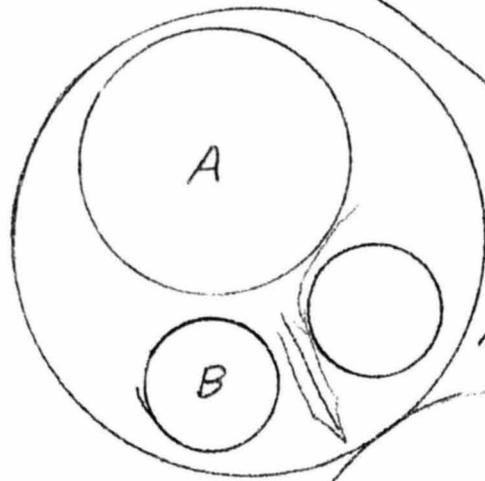

Weather bad now, it will continue.

our face
down.

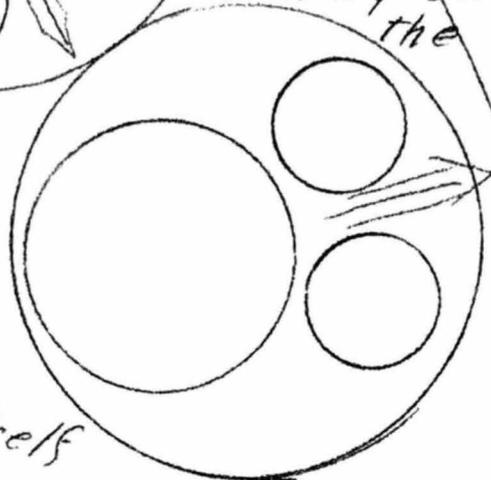

These go around
Two and the
third absorbs
it to the extent
that more than
can be absorbed
is pushed outward.

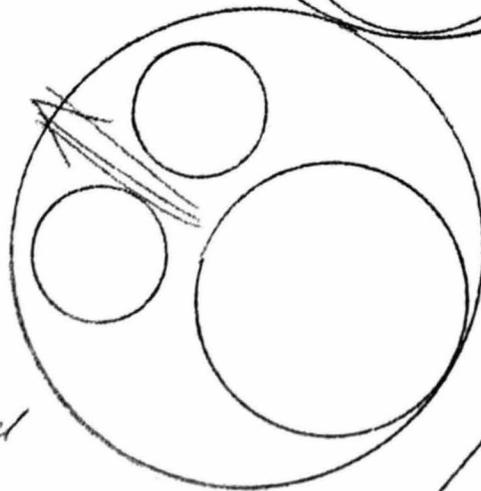

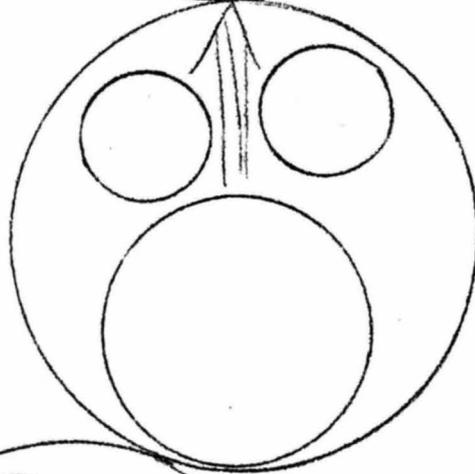

This continues in a circle

Magnetic force which has a bearing on the next in the series

This repeats itself by inversion. Do the same but face down.

These go around two and the third absorbs

Q. 6. At the present time so many of our government officials are secure in their jobs, they are comfortable in their lethargy and would resist other convictions. Perhaps your people could produce just something to wake up our people to prove this point. Has Affa any suggestion as to what this could be?

A. This is a difficult question to be considered. I know that many have seen our bells and mother craft. I know that some of your people have had short wave radio contact. I know that the Holy Bible tells of these things. I know that it is published and sent to every nation. What are we to think? Are the people always sleeping?

Q. 7. I don't think it is so much sleeping as it is reluctance to face facts. I wonder if it would be possible for Affa to place in our hands some gadget not made by humans here on earth? Something tangible as proof of your meaning. I am sure such a proof would be more effective than any other way.

A. You have many gadgets the same as ours. What would you like to have to be shown you?

Q. 8. Perhaps the generators which you use and which represents a technology that we do not have.

A. Alomar has painstakingly stated to the best of his ability that our generators are self operated by magnetic forces or a series of magnets placed in such a fashion as to insure continuous performance. Try out some globular magnets and you will see for yourself that it is a very simple process.

Q. 9. Thanks, I will do just that. I do not understand the underlying principles. If they will help me I will appreciate it very much.

A. Alomar is not an artist. I am not either but I will have a try at it. Please get me a round object.

REFER TO DIAGRAM

Q. ~~10~~ 9. What are the large circles made of?

A. We use mabonite. It consists of some silver. (A. drawing)

Q. What are the smaller circles made of? (B. drawing)

A. They are the same things that Alomar explained. Do you have anything at all that produces magnet impulses?

No.

Q. Are they electically conducting?

A. Like Figure on Page 7.

Q. 10. The only thing we can produce is a steady magnetic field and (drawing of electric magnet). We do not know what is happening within this magnetic field. It remains stationary as far as we know.

A. Magnets produce a field of activity. We use currents to keep the magnets alive.

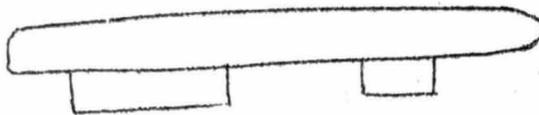

They attract opposites, placed so as to produce motion within themselves. They continue to rotate in a manner to keep

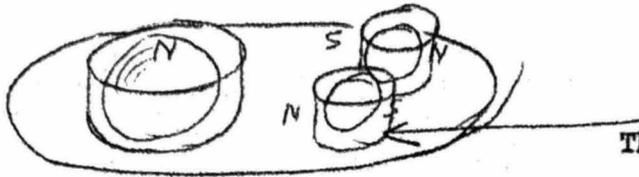

on attached is an original Diagram of the magnet

Q. 11. I am not sure that I do. Maybe if we could find out just how these mabonite spheres are built. Does mabonite conduct electricity?

A. Yes, they produce sort of a static condition .

This is the side view.

This one is on an angle.

Inside there are magnets that are spherical in shape.

Q. 12. Could you indicate where is N and S poles? on these magnets.

A. Marked on drawing. Adds to drawing, "this is the side view"

By inversion we mean to super impose a force from above on the force below.

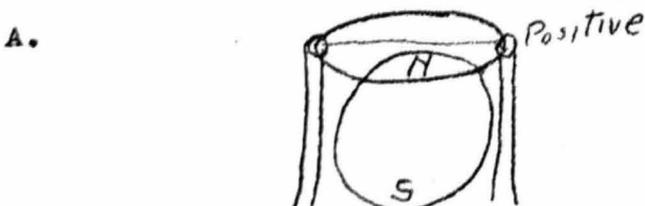

Q. 13. I think I know how he makes them but I don't know how they work. How many of these units are in the big ring?

A. Any series.

Q. 14. Are these magnets fastened in a tight position or are they free to spin around in their containers?

A. We have regulators. They spin freely but the deflectors keep them in the right positions. This is a current of electricity or charge that keeps the North and South in their respective polarity to the other magnets.

Q. 15. Affa must remember that I have never seen anything even remotely resembling this so I find it very difficult to imagine how it is built.

Makes diagram.)

To keep the north end up there instead of rolling to the side.

Q. 16. Does that (framework) spin round and round?

A. Yes.

Has it an electric charge on it from the electric storage battery

A. Yes. We use electricity as little as possible.

Q. 17. Are the other ones built the same but arranged to rotate? How?

A. I am ~~at~~-a lost myself here, wait.

Alomar is here. I ^{have} am Affa's drawing, wait until I scrutinize,

Q. 18. In what form does power appear?

A. Indicated on drawing.

Q. 19. Is that an electric field, magnetic field, or what is it?

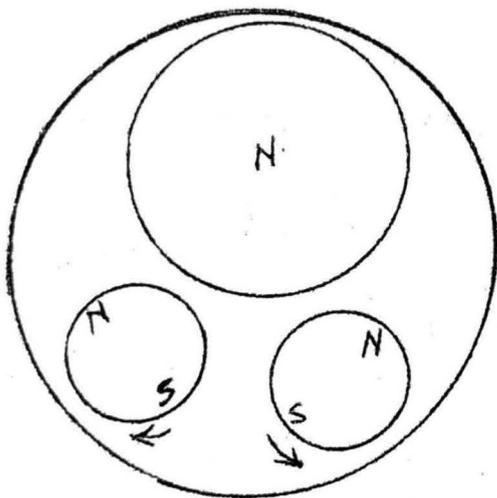

A. Magnetic force.

Q. 20. We always consider magnetic fields to be continuous. Lets' go back to the picture of a magnet. Where is the other end of the magnetic force?

A. I am at a loss, try me again.

Q. 21. Mr. Smith remarks about his own inadequacy in understanding.

A. My understanding is not good of what you wish to know. Let Affa try again. He thinks he knows what you want.

South pole over ~~north~~
north.

These push away.
This is what causes
them to spin.

By inversion you use the south on the north making a complete attraction .

Q. 22. Does inversion include north over south on all the circles drawn?

A. Yes. This makes a field that has all the potential power in one operation.

Q. 23. Mr. Smith remarks that his knowledge of magnetism is so inadequate.

A. Take the way the earth rotates ~~at~~ on its N and S poles, if another is close by it produces a power that sets the smaller in motion for instance, the moon. We use the earth and two moons.

Q. 24. Do the magnets in this top plate spin also?

A. Yes.

Q. 24. Does it spin in the same direction?

A. Yes., in the same direction adding to the power output.

Q. 25. Is this is a source of magnetic field?

A. Yes. Maybe you do not realize the series also spin as you prefer to call it.

Q. 26. Does the whole works spin?

A. Yes, if you wish that much power or you can divert it into a similar sphere in the centre and transmute it into any direction you prefer by tubes as in your television sets or similar.

Q. 27. If you do that will it provide a push?

A. It provides a field of activity ready to use.

Q. 28. If we put a coil of wire in there will we be able to draw electric current from that wire?

A. Yes, or you can use magnetic wave lengths. This is our main source of power - (wave lengths).

Q. 29. Which is something we know nothing about. We get our main
& 30 energy from water falling.

A. This would be like a central sun that absorbs all energy not used and at the same time produces more than it uses.

Q. 31. We don't even know how our sun works?

A. That seems to be our gap - magnetic lines are handled very strangely to you, we train for this. It is an exchange of power that keeps itself strong. The more you use it the stronger it is, you manipulate it mentally and by personal contact.

Q. 32. Can we do it?

A. Be careful at first but by concentrated effort it can be done. I will explain. I spoke and mentally impressed the contact that was the negative contact - then one higher than myself contacted her by nerve force at the solar plexis, next step was to concentrate on a signal that could attach itself to her ear - then she can take messages independent of her own mind, understand?

Q. 33. Admiral Knowles. Regardless whether or not we know how to handle this power could we build such a source of power and then know how to use it afterwards?

A. Perhaps, but we have been a long time perfecting this. It would be like blowing up a balloon without having a string. It took two centuries to use this power so do not let this baffle you. The principle works mechanically if you use a battery.

- Q. 34. If I go ahead and try to build one of these generators will they give me a hand when I get stuck as I inevitably will.
- A. Yes. When you start I will see that you are given assistance as Ankar previously promised.
- Q. 35. Thanks very much. I will get right at it as fast as I can when I get home.
- A. I wish we could tell you more but each man has to have about ten years training in order to use this power effectively.
- Q. 36. I would like to know if there is a substitute for mabonite, something else which we have.
- A. You can use many metals if they are properly insulated.

Comment re August visit.

- A. They will be so completely surprised that no one will think of doing much, that is how we will do it.
- Q. 37. I think I can arrange for a radio communication this coming Sunday around three o'clock p.m. until perhaps five p.m. -- on about 20 megacycles.
- A. What are megacycles?
- A megacycle is a million times every second, 20 megacycles is 20 million times every second.
- A. Good. I will have a mother ship out there in your direction at 3.
- Mr. Smith said thanks very much and we will try to make the connection.
- A. Good. We all thank you very much from all of our crew members on M 4. Ponnar says he will stand by and give his love and best wishes also. If he should be in your vicinity his signal will be OEEU▷---- Li Li
- and he will try out the signal the same as Ankar told you.

Q. Can I make a generator?

A. Yes, I am sure you can. You have the fundamentals, start and your train of thoughts can be directed by magnetic thought waves as we have just tried to explain. If enough light is brought into a room, no matter how dark it was, it will become light.
