21 April 1980

MEMORANDUM FOR THE RECORD

SUBJECT: Summary of Sessions CCC59 & CCC61, Conducted at 0900 hrs,
03 April 1980, Against the [REDACTED]

SG1A

SG1A [REDACTED]

1. (S) The target for these two sessions was the [REDACTED]

SG1A

SG1A [REDACTED]

In both sessions, the facilitator and viewer were provided with the coordinates and information indicating that the targeted area was almost completely covered. The facilitator was directed to tell the remote viewer this, and direct him to report the type of construction which the cover was made from. Following response to this question, the facilitator was directed to obtain information pertinent to what was being maintained under the covering. No other information was provided to either the facilitator or the viewer.

2. (S) In both cases results indicate that neither viewer remote viewed the assigned target. The viewer in session CCC59 reported a cloth and hard type cover, under which there was a boat construction facility. The viewer in session CCC61 reported a concrete type of cover over a multi structured floor of at least three levels, and a missile type launch facility. What should be noted here is that there is three or [REDACTED]

SG1C [REDACTED]

target coordinates. It is therefore very possible that the viewer in this case, found himself at the wrong target location.

3. (S) A different truck park will be targeted with a different type of cuing in the near future. It is very possible that the style of cuing which differed radically from that normally utilized could have caused the target miss problem to be actualized.
