

~~Wells~~

8610 - Session # 4
(cont.)

One project might involve an individual in the building monitoring or coordinating the activities of person(s) who ~~are~~ located 'outside' the facility; who record, analyze, develop activities relating to 'hard science / technological things' and the ~~also~~ associated idea of "finding things out."

The structure itself is "technically" oriented, involving technical equipment, but this interest extends into greater socio-economic spheres external to structure. "Makes connections anywhere it can." This agency "takes action" rather than produces an end product (whether tangible or informational).

1 year from now, effort still continues, but is scaled back - as if part of resources has moved to another place to form a sister agency facility.

mission

Structure is "technical" - contains technical equipment, but interest in "technical" extends into socio-economic sphere external to structure. Makes assumptions anywhere it can.

Takes action - doesn't "produce" as primary function.

Can cooperate/resist ~~at~~ non-organic elements if necessary

Act like
reminds
me of tech
SVC's report

Spl/2 reminds me 3 strongly of tech services people who go provide support to agencies who have discovered a "bug" or need electronic OPSEC sppt they can't handle themselves

1 yr from now, efforts still continue but less interest - as if part of element has been moved to another place as core to form sister facility.

5 1/2 Closed room. Room is fairly comfortable appointed. Don't pay attention to surroundings. They have equipment they monitor. May wear headphones.

Summary

People w/in structure walk around, sit, wear
 greysish clothing, have short hair, are predominantly males,
 operate equipment, often work individually but consult w/ each
 other; work at console. Facility has an ~~open~~ ongoing
 mission involving diverse projects + operations. People
 are serious, relatively humorless, dedicated + believe in
 what they're doing.

A project might involve an individual in
 the bldg monitoring or coordinating the activity of
 person(s) exterior to facility. Exterior people
 record, analyze, develop; activities are related to
 "hands-on"/technological things, + the idea of "finishing
 things out."

Structure itself is "technically" oriented, involving technical
 equipment, but interests in "technical" extend into greater
 solid-economic sphere exterior to structure. Makes
 connection w/ where it can. Agency "takes action"
 rather than produces end product (whether tangible or informational)

1 yr. from now, effort still continues, but is
~~scaled~~ scaled back - as it part of resources has
 moved to another place as ~~core~~ core to form sister
 agency/facility.
