

SECRET/NOFORN - SKEET CHANNELS ONLY

4. (S/NF/SK) Comments: At the bottom of the monitor's bag of tricks lies the tool of directing the Source around the site, rather than allowing the Source to "roam" at leisure, looking for "the answer"--it may be that there is a subconscious or unconscious aversion/repulsion to a key element of the target. (For example, this particular Source has been known to avoid, i.e., not recognize and objectify, percepts which are connected with the idea of "death").

SECRET/NOFORN - SKEET CHANNELS ONLY

SECRET/NOFORN

MEMOFOR: GL

SUBJECT: PROJ 8715

---Viewer 018 is insistent on perceiving the "pile of powder" he discovered in his initial session. Suggest 018 be allowed to "follow" his pile of white and grey powder and determine:

- a. The nature of the powder
- b. How is it used
- c. How is it combined with other powders, solids, fluids
- d. What is the impact of the resultant substance, if any
- e. What physical changes take place when the powder is combined with other substances
- f. Follow the end product to its destination
- g. Determine where the powder originated from
- h. How did it get to the site
- i. What are the military implications of the end result
- j. Describe its use

memorandum

DATE: 2 October, 1987

REPLY TO
ATTN OF: DT-SSUBJECT: SESSION SUMMARY, PROJECT 8715 (C/SS)
SG1J

TO: DT-S (ATTN: [REDACTED])

1. (S-SS) Statistics: Project #: 8715
Viewer: 018
Session date: 1 OCT 87
Filename: 8715.L03
2. (S-SS) The perceptions gained from this session were, by and large, a repeat of previous sessions. New items include:

a. There were perceptions of two men located in the structure, near the pile of powdery dry substance. Both men were wearing black business suits. One was carrying a black leather (AOL: pouch). The other man was somehow associated with a sharp metallic item (NFI).

b. Once again trying to identify the location, an attempt was made to identify the powdery substance in the large pile. From all indications (see page 10), the substance is some kind of building material; supposedly cement or limestone. There were repeated impressions of this material being destined for final use in the construction of a bridge.

c. In a final attempt to identify the overall location, the impressions reaffirm a previous session's concept that the overall area is a land/water interface, supposedly with a port (see sketch, page 11).

3. (S/SS) Viewer's critique: I have the feeling that there is something about this site which is not being decoded correctly, and that I will probably continue to have trouble identifying site specifics until I can work through the problem. At this point the problem, itself, has not been identified, so I can only continue to work and wait. I feel that I am at the site, but that the perceptions gained are neither important, nor revelent to the information desired.
