DATE: 7 October, 1987

REPLY TO
ATTN OF: DT-SSUBJECT: SESSION SUMMARY, PROJECT 8715 (C/SS)
SG1J

TO: DT-S (ATTN: [REDACTED])

1. (S-SS) Statistics: Project #: 8715
Viewer: 018
Session date: 5x OCT 87
Filename: 8715.L04

2. (S-SS) The perceptions gained from this session were, by and large, a repeat of previous sessions. New items include:

a. There were a few recurrences of an impression in which there were several people standing very still (AOL: like mannequins), with strong backlighting (AOL: like a brilliant flash). This impression was not pursued further.

b. There were several repeated impressions of approaching time, specifically "Christmas". This impression was also not pursued further.

c. Movement exercises were tried, with the "pile of powdery material" being the center point. This resulted in the following perceptions:

1) 200 Meters North of the center point, a military truck was perceived, which resembled a 2 1/2 ton truck.

2) 100 Meters East of the center point, there was a large quantity of white powder, made up of very shiny crystals (AOL: like sugar).

3) 300 Meters West of the center point, there was another large rounded cone (AOL: in the shape of another pile), which seemed to have a segmented appearance to its surface (AOL: like the shingled coverings of the road-salt pyramids found all around Maryland).

d. An attempt was made to return to the main target, at which time I managed to work out and objectify a vague, troubling impression which has been with me from the first session performed on this target. The impression has been that, concurrent with the tasked objective of the site, which seems in no way related to the physical aspect of the site's location, there is another activity of importance which is not included in the tasking, and about which the tasker has no knowledge. This other activity seems to have drawn my attention from both the site location, and the tasked site activity. I have known that this activity was not what was tasked, and should be ignored, but

have been drawn to it, anyway. This activity seems to have something to do with the passing of information between two people who are not in any way related to the site location, except to use it as a secluded place to perform their transaction in secrecy. I have the feeling that the information being passed might in some way relate to the tasking (AOL: that the information we are wanting is being compromised, even as we are seeking it), but am not certain that this is the case.

e. Having objectified what had been bothering me through the past sessions, I returned to the site and gained the immediate perception of a long, cylindrical object with "barbs" or "fins", lying in a clean workroom, located somewhere in the same structure as the "pile of powder". With this, the session was ended.
