~~SECRET~~/NOFORN - SKEET CHANNELS ONLY

PROJECT SUN STREAK (U)

ERV SESSION PROCEDURES REPORT

3

WARNING NOTICE: INTELLIGENCE SOURCES AND METHODS INVOLVED

CONTROL NUMBER: 8701

NICKNAME:

DATE OF SESSION: 12 Jan 87

TARGET COUNTRY: UNKNOWN

REFERENCES: SPR-001-87, dated
9 Jan 87, SAB

SESSION NUMBER: 04

DATE OF REPORT: 20 Jan 87

MISSION STATUS: Closed

TECHNIQUE UTILIZED: ERV/CRV

SOURCE IDENTIFIER: 101

1. (S/NF/SK) TASKING: Prior to the session, the Interviewer was again instructed to concentrate on the planned (future) use of this site to determine its true purpose. Prior to actually beginning the session, Source was provided a short brief back on the major gestalts He had already provided and told He was to return to this area. During the session Source was provided the same encrypted coordinates as previously provided in keeping with the Extended Remote Viewing (ERV) protocols. Source was provided no other descriptive data pertaining to this site except that noted above.

2. (S/NF/SK) SESSION: During this session there were no reportable incidents or unusual occurrences which may have affected the results of this data. Following the actual formal session, Source was directed to utilize Coordinate Remote Viewing Stage VI protocols during the post-session interview on those key facilities reported upon the actual ERV session.

3. (S/NF/SK) SUMMARY:

a. (S/NF/SK) Source had no apparent problem in re-acquiring the proper site and at the direction of the Interviewer, conducted a short "tour" of the site to fix the previously reported items in his mind and to locate any new facilities or impressions. This technique was apparently successful since Source soon began reporting on the presence of what appeared to be an airfield with, "sleek, metallic objects parked on it". Additionally, Source received a strong impression of "bunker-like" structures located near this runway or airstrip. Source also reported that His current impressions of the site were different that previous

~~SECRET~~/NOFORN - SKEET CHANNELS ONLY

~~SECRET~~/NOFORN - SKEET CHANNELS ONLY

sessions in that the site appeared to Him to be, "much larger than previously thought", with many more buildings and structures than He had originally perceived.

b. (S/NF/SK) One of the new buildings that Source perceived during this session was described initially as, "an igloo". When specifically queried about this "igloo" Source reported that this structure was, "located near the runway, hardened, maybe dirt/grass covered, lighted inside" and possibly used for "storage". Source was unable to positively identify any items being stored in these structures. Other areas identified included a general administrative type building similar structures of rather generic meaning. Source did, however, begin to focus on a specific building which He described as, "big, solid" with a relationship to a military type of command or operations center.

c. (S/NF/SK) A closer examination of this building by Source provided additional data pertaining to this building including such items as, "the rooms are large and the floors (between) stories are connected by ramps. (There are) several functions going on here (including) G4 (type activity), weather, logistics and supply, command and control, a "lot" of advisors, and a communications "liaison" area". The people here are senior in rank with a, "lot of braid on their uniforms".

d. (S. NF/SK) As in previous sessions, Source was "moved forward in time" to a point when the site was fully operational and directed to report on his perceptions at that future time. In this future period, Source reported that the bunker (igloo) structures which he perceived as storage facilities now contained "something". These items were described as, "metallic, modular, (like) a bookcase laid down on its side" An accompanying sketch, prepared in the post-session interview, revealed an object resembling a rectangular, open grid object resembling a support pylon. Other items in the bunker included dark, metallic objects which, in the post-session sketch appeared to resemble loose ammunition rounds. No other definitive data pertaining to this structure or its contents could be discerned.

e. (S/NF/SK) In previous sessions, Source had described the presence of tall, cylindrical objects at this site. Upon re-targeting of the site during this session, Source described these objects (in the future), as being, "elevated, sitting on top of something (at an) angle of about 80 degrees to the ground. Words relating to these cylindrical objects included: "tracking, homing, listening, detecting, circumnavigating (an important concept), shuttling, choking (as in the choke of a car), and the presence of "wires". Each of the cylinders is perceived to be independent of the others but "enhanced by the others". The entire compound and

~~SECRET~~/NOFORN - SKEET CHANNELS ONLY

~~SECRET~~/NOFORN - SKEET CHANNELS ONLY

the cylinders are related in that they are all "tools" to a specific end. A typical sequence of events when this site is utilized for its intended purpose would find orders being received at the larger command type building who would then be required to chart a course of action. These proposed courses of action are then relayed back to the source of the initial order where they are approved, disapproved or modified. The orders are then relayed back to the command building. At this time there is a mandatory period of "waiting for another decision to agres or not". At this time the cylindrical objects are, "heated up, readied and remain on standby. Prior to finishing this session, Source reported one final impression of circular objects, "like dishes standing on edge" located "directly in front of the igloos". According to Source there were several of these objects and they were important to the overall functioning of this site.

4. (S/NF/SK) OPS FEEDBACK: At the end of this session, Source had completed four separate sessions on this target. The data provided to date has been informative but of limited use in that definitive explanations would be difficult to draw from the fragmented information provided by Him. It is believed that this is a factor due more to Source's limited background in state of the art technology rather than any perceived problems He may have had from the aspect of successful RV techniques. Source's data will provided essential confirmatory information and possibly additional targeting data for other Sou  site.

PROJECT: 3701

Approved For Release 2000/08/08 : CIA-RDP96-00789R000300080001-0

START: 1010

DATE: 12 Jan 87

SANCTUARY: 1016

SESSION: 04

TARGET: ~~1016~~ 1018

SOURCE: 101

FINISH: _____

SG1B

COORDINATE: 

FRONTLOAD:

" WE will be returning to the same site we worked last time. To refresh your memory, it had buildings, cylindrical objects and groups of these objects. Move initially to the site as a whole and report on its general configuration, relationships of objects etc.

* Some heater noises

NOTES:

- ① No known indelicacies or stated problems
- ② recovery from bout of flu still not complete
- ③ some anxiety over upper/lower GI series tomorrow

SG1B

→

★ Purple sky, body of water, green, natural area, separated structures, isolated in a way, area is brown, grass, I don't see snow, large structure, not as tall as I first thought, maybe only three stories, fenced area, some green here now, series of structures, functional, not designed for beauty, long, narrow, barracks, like, under block or like under block, flat roof, a series of these structures, land is flat, some rolling hills, still trying to orient myself, compound is much larger than I thought before, another large structure. soil is kinda sandy, not desert sandy but loamy, sandy. concrete structure (bunker), focusing, trying to reconcile this with last place, a lot of new things that I missed before I don't know how I missed before

→ tell me about the new things

★ What appears to be an airstrip, hard, flat, angles, sleek, metallic objects parked on it. Skies is grey, European grey, it doesn't feel cold however, concrete structures (bunkers) are in vicinity of runway, concrete flat, separated - The entire area is fenced. Place has a definite military feel about it. Not as noticeable the last few times. moving around..... distinct feel of military base, bulleting areas, admin/ops area, feels "air forcey" - Compound much bigger than I previously thought.

→ tell me about the size

★ Admin area near "Y" shaped runway, back about 1-K is structures look like troop billets, 160005 -

3

→ 1960s

★ Road, concrete in front, fenced, reinforced, maybe dirt, grass covered. 3/4 maybe many more. People in the area. Still outside - activity - Feeling of efficiency here,

→ more data on the 1960s

★ Secure, hardened, set apart, set in, chunked, lights inside, cooler inside, walls slope up, looking for something inside, storage, not sure if anything is here now or not -

→ The location of 1960s -

★ Adjacent to the long airstrip, between large building - 1960s Then open area, then admin building area -

→ move now to cylindrical objects reported other times

★ umm, umm, ..., okay - umm, umm, ... the big building, very solid building - a very solid part to it - I have them here, not positive of their location or time - focus - getting a place equidistance from 1960s and big building - They seem further away now -- metallic, cylindrical, thin, (not quite right), not as tall as I first thought, they are shuttered in some way, hinges and shuttering doors but I don't know how that fits in - People around, men, -

→ Big building

★ So far only building I have seen that has some design to it instead of just functional, moving inside - appears access may be limited - Kind of like you have to show and ID card to get in PX - no big security yet - area is fairly nice - military feel but not 100% - some civilians, women here -

4

→ Pause, use this moment to relax - It is now 12 Jan 87
 Move forward to a time when this facility is fully
 operational for the task it is designed - Describe the
 site now -

★ Don't know exactly when this is or where on site -
 But I have a very strong visual of a printing press
 printing pamphlets - moving back to the sight -
 People appear one step more alert - more secure,
 readiness,

→ Large building

★ Men in uniform, dark blue, hurrying about,
 like an operations center, people going to where they
 are supposed to be - not quite sure of the role of the
 civilians - they are separate from the military - not like
 DAES, they ~~are~~ have a separate mission - they aren't
 integrated - integration comes higher up -

→ Continue to move through the building - Rooms are large -

★ Floors change via ramps, there's a logistics/re-supply
 area - you might think it similar to a - C-4 - there is a
 weather area - assume that's where it's monitored, a
 command area, an advisory area, a lot of advisors,
 there's -- careful here -- communications liaison area -
 People aren't communicators but they liaison between
 command and communicating out - There is lot of braid
 on the uniforms - Senior Colonels -

→ A lot of rank

★ Yes, a lot of senior people -

→ Move outside building - concrete structures

5

★ Yes, I recall, I'll give it to you and let you figure it out - in front of structures - one larger metal circle, extremely large - larger than structure - Big dish - in front of each of them - like a dish on end - its warm here -

→ Tell me about the configuration

★ concrete all around the area now - the Bunkers were empty before - now something there - There metallic things in bunker now - modular - It doesn't make sense - a metallic bookcase laid down on its side - a lot of small, dark, metallic things - look like they should be in box but they are loose - 3/5 can in length some 10 can

→ Examine the metallic bookcase

★ modular, laying down, standing at the front - its long, 7/8 meters, made up of modules, like 1 m long - like the shelves in bookcase - can draw - some of the smaller metallic objects - look like a display case for sinks when you go fishing - 4/5 different sizes

→ Back outside - cylindrical objects now in the future

★ They are elevated, sitting on top of something - they sit about 80° angle to ground - not quite perpendicular - "Tracking" "homing" "listening" "detecting" "circumnavigating" "chattering" like the choke in a car" wires present - "seeing a picture of a concrete armadillo -

→ Describes relationship of cylinders to other structures

★ Metaphysically, they are inter-connected

6

★ Each is also independent, Each is enhanced by the other. Each is under same chain of command
Compound & cylindrical objects are all tools

→ Seek out the ^{overall} purpose - ask someone -

★ Top floor of big building - Man in brown uniform -
... Pause ... means to an end, its one of the tools, not the ultimate tool - Part of a whole -
Important - but not critical - With or without they will continue down the path - This is helpful, not necessary - Different people consider purpose differently -
Agreement that compound should exist but various decision makers perceive a different purpose -

→ IN the events its used describe the sequence

★ Begins outside compound. 1st step within large compound a decision is made within big building - course of action -
Relayed back out again, approved / disapproved / altered /
Watching now for some sort of action - OK ---
maybe AOL --- not sure --- orders relayed to gunner
predetermined targets, defensive measures taken -
waiting for commo

→ more to when its being used

★ its being used - its in waiting period - part of its use
another decision made to agree or not - That's all in getting (AOL space shuttle) -

→ Activities of cylinders during this phase -

★ heated up, readied, remain on standby -

→ Describe the actual use -
