As Bk
approach

S4 1/2 - very professional + workmanlike + intelligent
in how it's all put together, engineered, constructed,
organized, etc.

S4 1/2 - technology or advanced; very sophisticated in
its approach: "like" few of principles employed
are new or innovative, but the utilization,
"synthesizing" combination of equipment +
principles, through a logical [development] a
projection of former technology, is still very
advanced + expands greatly the capabilities,
operating parameters and use of the system
involved.

54/2 "Zones" of involvement. One "zone" (not necessarily physically defined) comprises all things directly related or supporting the "nerve center" or "operations center". Outside that (figuratively) there are other agencies or groups or organizations that are there to provide some sort of support for the main purpose of the installation, but which are not directly connected. A sense of cold-bloodedness, ~~calculated~~ calculations or cynicism connected w/ outside "zone" of involvement.

S 4 1/2 - military involvement at site - but "like" joint services operation - such as DIA a NSA is a combo of various military branches + disciplines plus Gov. Sec. civilians...

One structure, you previously described sloping me, now after
 referred to as "opns center" or "nerve center," involves
 sophisticated, likely, defense-related concept; the idea of
 an abstract "barrier", "trip wire", "shield", envelope; the
 organization + which is complex, intricate, envelopes,
 overlapping, layered, + interlocking. There are other
 sites, perhaps similar in nature connected with it,
 but ~~not~~ great distances away. Impression of very professional
 + intelligent engineering/construction/organization involved.
 enough technology involved is not necessarily on
 innovations; the way it's used, + combined w/ principles
 results in dramatically ~~improved~~ ^{enhanced} capabilities + new
 use. ~~The~~ System is automatic, greatly reducing required
 personnel.

There seem to be nonphysical "zones" of involvement.
 there are those people + agencies directly connected w/
 the opns ctr. + its syst.; "outside" of that are
 people + agencies who are in syst also but
 further removed. These people are cold-blooded, cynical,
 calculating;

West of opns ctr. is a cluster or grouping of
 structures, involving some sort of wounded concept,
 as well as angular. A lot of open space is involved
 one yr. ahead, a sense of "protection" + competition +
 "empire" protection is observed; as well as the sense of a
 need for validation of ~~one's~~ ^{one's} idea or approach.
 "Distributinal" is a relevant concept here.

Cluster of Structures not intrinsically connected

Approved For Release 2000/08/08 : CIA-RDP96-00789R000300110002-5

w/ hardware - i.e. missiles, ~~gears~~, or other such prosaic type things. People involved present the air of unity + teamwork, + sense of mission... "prove" their project is all its meant to be.

Site involves military in a "joint service" sense - various branches + disciplines, together w/ many civilian specialists + managers.
