

~~SECRET~~/NOFORN-SKEET CHANNELS ONLYPROJECT SUN STREAK (U)WARNING NOTICE: INTELLIGENCE SOURCES AND METHODS INVOLVED

CRV Session Procedures Report (S/NF/SK)

Control Number	: 8701
Date of Session	: 11Mar87
Date of Report	: 11Mar87
Source Identifier	: 021

1. (S/NF/SK) Tasking: No change in tasking. Monitor granted access to complete tasking packet, (original tasking data sheet attached). Ops officer directed monitor to apply CRV format to source 021 in an attempt to induce/augment target acquisition/contact.

2. (S/NF/SK) Session: Source performed excellently; good target acquisition and contact throughout session. Identical cuing strategy was used for this session as that for 04Mar87 CRV session (source #003). Source was not informed that she had worked this site previously.

3. (S/NF/SK) Summary: Source perceived a composite structure made up of "a large slab or block" and vertical, massive, thin, tall sections with tapered, metallic open components forming sort of an (AOL) "tripod". A continuous high-pitched whine (almost beyond hearing range) was associated with both parts of this structure. The site itself commands a panoramic view. The "top" (cue) of the structure has, or will have, something "off balance" (AOL-"gyroscope"), which has parts that can move independently of each other. There is a round, globular, hollow object atop the structure (AOL-"like a sphere"), filled with "jumbles of things". There is a "layer of heat" above the structure, (AOL) "like heat is being generated to influence the atmosphere". 200 meters WSW of this area is an enclosed pool of liquid, bubbly and cold with sulphur odors; there is an underground pipe leading into (feeding), and out of (draining) this pool. [NOTE: Source #003 reported similar perceptions during his 04Mar87 session, but monitor did not include them in the summary]. Prior Emanations connected with "heating the atmosphere" were: heat, radiating, manmade, spreading, melting, "almost a visible delineation of winter/spring".

4. (S/NF/SK) Feedback: Monitor complemented source on her performance and mentioned that source #003 also perceived "liquid" at a

DECLASSIFY : OADR

~~SECRET~~ NOFORN--SKEET CHANNELS ONLY

point on the site where photos seemingly indicate otherwise. [NOTE: Monitor feels that these indicators (sulphur pool, heating) may indicate the presence/function of an atmospheric heater at this site, possibly in combination with other devices.

draining

Site is composed of a large greyish-white solid plastic structure and a tall, open tapering metallic structure. A portion of the first structure is below ground level. There was a high-pitched whine at both locations. At the top of the second structure there was a globe-like object, hollow, with a variable filament-like network. It was made of independently moving parts and generated a sound of heat.

2 to meters W/SW there was a "pool of water" - liquid of some sort cold to the touch and bubbly with a strong sulfur odor. Underneath the enclosure holding the liquid were pipes - one feeding & one draining.
