PROJECT SUN STREAK

WARNING NOTICE: INTELLIGENCE SOURCES AND METHODS INVOLVED

PROJECT NUMBER: 8802	SESSION NUMBER: 02
DATE OF SESSION: 30 MAR 88	DATE OF REPORT: 31 MAR 88
START: 1015	END: 1128
METHODOLOGY: WRV	VIEWER IDENTIFIER: 079

SG1B

2. (S/NF/SK) VIEWER TASKING: Describe the content of the structure at Encrypted Coordinates 275601/958588. If affirmative, describe shape, form, function, use and goal of the item of intelligence interest.

3. (S/NF/SK) COMMENTS: No Inclemencies noted. Tasking indicates the target structure is located in the Soviet Union. This is an apparent assumption made by the undersigned. 079 categorically indicates the structure as being located in the Middle East and specifically in the Peoples Democratic Republic of Yemen (PDRY) (with further indications of Oman as a possibility).

Summary

(S/NF/SK) Source 079 described the target as long, tubular, light-colored, silver objects stored and assembled in a round yet squared-off structure. Doors from the east wing of the structure give access to the objects; the objects are located from the top of the circle of the structure and down to about three quarters of the length of the structure. The objects were subsequently identified as upgraded and updated versions of the Soviet SS17 (and possibly SS-19) Intercontinental Ballistic Missiles (ICBM) system. They are currently located and being tested in the Middle East, specifically in the Peoples Democratic Republic of Yemen (Yemen - Aden). Anticipated completion date for this project was projected for either November 1988 or November 1989. The letters "QRSTU" or "QRXTU" were related to the type of missile and the name "Dommer" (phonetic) appeared related to the Soviet technical, industrial complex associated with the missile. The entire project represented an upgrade of a Soviet nuclear missile system that originated in the early years of the 1970's.
