WORKING PAPER

Project: 8920 (TC-31)
Date: 890616
Viewer: 018
Session: 02

SUMMARY OF INFORMATION:

1. (S/NF/SK) The **SG1A** was reaccessed. It appears to be a very deep-hulled ship (see sketch, page 1). Drugs will be taken on, and placed into a vertical "shaft" or compartment located slightly rear of center and shortly to the right (looking from the front of the ship) of middle. The **SG1A** will offload its drugs 28-29 days after unloading them. The **SG1A** present location was dowsed as approximately 20 deg N/ 80 deg 30' W, on a present eastwardly course which will turn and go southwesterly (see page 4, bottom). The intended offload point was dowsed as 29 deg 30' N/91 deg 15' W. The **SG1A** will not change name before offloading.

16
new Orleans
(Area Louisiana)

2. (S/NF/SK) The **SG1A** was perceived as approaching the "mother ship" in a manner different from the **SG1A**. The **SG1A** approaches quite close to the "mother ship". A transaction then takes place which I could not completely break out: either 1) the **SG1A** asks for drugs and is casually refused them, or 2) the "mother ship" offers drugs and the **SG1A** casually refuses them. Either way, I got the definite perception that the **SG1A** does not onload drugs from the "mother ship".

3. (S/NF/SK) The "mother ship" was Stage 7'd for a name. The responses were: "FLORIDA", "FLORNOY", "FORREST", "FORESTALL".
