# memorandum

DATE: 21 MAY 90

REPLY TO  
ATTN OF: DT-S

SUBJECT: SUN STREAK REPORT - 9025

TO: ~~DCSINT~~ ~~FO~~ CH, DT-S

1. (S/STD) On 16 & 17 MAY 90, four Remote Viewers, 01B, 025, 052, and 079 conducted four sessions in an effort to answer requirements against tasking for project #9025. That tasking included the background information of: "The target is a blue and white 45' fishing vessel, the [REDACTED] It recently left the Peninsula de la Guajira, believed to be (you will have to decide for yourself) headed for the Roncador Bank."

SG1A

- a. Determine the current location of the [REDACTED]
- b. Determine whether it is carrying drug contraband.
- c. IF SD:
  - 1) How is it wrapped?
  - 2) Where is it stored on the vessel?
  - 3) Where will it be off-loaded/transferred?
  - 4) When will it be off-loaded/transferred?
  - 5) Determine where the drugs will enter the U.S.

SG1A

SG1A  2. (S/STD) 01B, in one session, reported that, at the time of viewing (1250 hrs, 16 MAY 90), the [REDACTED] appeared to be circling about a location of 13 deg 15'N / 71 deg 53'W, and that there were no drugs on board at that time.

SG1A  3. (S/STD) 025, in one session, reported that, at the time of viewing (1000 hrs, 17 MAY 90), the [REDACTED] was located at 14 deg N / 73 deg W, and was moving in a westward direction. 025 also perceived no drugs on board at the time of viewing, but that a transfer of drugs could occur at 20 deg N / 73 deg W, just above the Dominican Republic (Proj. Dfc.'s note: this location is approximately 600-700 miles north of its suspected location, and appears unlikely, if it is enroute westwards towards the Roncador Bank).

4. (S/STD) 052, in one session, reported that the [REDACTED] was located

at 14 deg 50' N / 77 deg 40' W, and was carrying a white, grainy, bitter tasting, sweet smelling substance which "burns my nose" in small rectangular packages. These packages were located in a large, rectangular metal container with a lid on top, opening upward (BTB a freezer or cooler). 052 was not able to determine an off-load/transfer point, but determined that the point of entry into the U.S. would be 35 deg 30' N / 75 deg 45' W, near Cape Hatteras, NC. Some part of the shipment may also be bound for the eastern tip of Long Island, NY, at 41 deg 15' N / 72 deg W.

SG1A□

5. (S/STD) 079, in one session, reported that the [REDACTED] could be located (at some actionable time future to the session) at 13 deg 7' N / 75 deg 15' W, heading westward towards the Roncador Bank. Off-loading will take place at those coordinates, as well, onto a vessel (NFI) which will head towards the Gulf of Mexico with the contraband, which 079 identified as cocaine.

SG1A□

6. (S/STD) PROJECT OFFICER'S COMMENTS: The suggested scenario is that the [REDACTED] left the Peninsula de la Guajira without drugs on board, went slightly northward and possibly dallied there before continuing westward with drugs (although no pick-up/on-loading was detected). There it will transfer the drugs to another vessel for shipment to the Gulf of Mexico, and possibly the eastern U.S. (Cape Hatteras, NC and/or Long Island, NY).
