DATE OF SESSION: 17 AUG 88 DATE OF REPORT: 17 AUG 88

START: 1403 END: 1508

METHODOLOGY: CRV VIEWER IDENTIFICATION: 025

EVALUATION: *4* MONITOR: 018

SG1A

1. (S/NF/SK) MISSION:

2. (S/NF/SK) VIEWER CUEING: "Today's target is the object which was discovered in yesterday's session."

3. (S/NF/SK) COMMENTS:

a. This session evidences 025's increased willingness to draw rather than give perceptions in long, run-on sentences. 025 has been encouraged to "probe" the drawings for Stage 4 perceptions. I am aware that this is dangerously close to encroaching on major parts of Stage 6 training, but it has proven to be a very useful tool. Not only does 025 find it easier to gain perceptions from probing a drawing than from probing a Stage 4 column, but it also necessitates more drawing, since I will not allow 025 to go back up the page past an AOL break. This requires that 025 make another drawing to probe for further Stage 4 perceptions. Each new drawing is made with the benefit of closer site contact, and therefore appears to be more accurate, and to provide more accurate perceptions.

b. 025 experienced some amount of AOL drive near the end of this session, but nothing drastic. Drive did not create incorrect perceptions, but only resulted in the tendency to tie the correct ones together incorrectly.

025

17 August 1988

Summary

The target is circular with extensions. When the big object is working it generates fast motion. The object itself is an old brassy metallic color and heavy. Some relationship exists between this object and the area directly beneath of it. The target and radar are in two separate locations (not together on the boat). Covert operation. Although the object is around water when it is functioning, something flies into the air propelling energy in an upward outward direction. Confusion break - How is it that this object can cause an explosion when it has been used before?
