S2 SESSION COMMENTARY  
28-29 SEPTEMBER 1987

SG1J

MONITOR PAUL

I am definitely experiencing more noise this week. Noise from working with a new monitor, from working at a quicker pace, and from dealing with an increased amount of AOL due to stage 2. This threw me out of structure quite a bit yesterday, though today I'm starting to get a handle on structure again. Adherence to structure makes quite a difference.

I am still editing a lot, though much less than last week. Practice is helping me to eradicate this bad habit. AOLs still throw me off. I still feel inclined to distrust the information that caused the AOL, which is a mistake, but one that I am conscious of and trying to work through. The more practice I get viewing the better.

Noise aside, my contact with the signal line is growing stronger. I'm learning to internalize the process and my awareness of the process. Paul's annoying requirement of not probing the signal line, while exceedingly frustrating for me, is helping me to trust the system more and develop the speed I need to get the S2s objectified as soon as I sense them.
