note

for
building

I felt that I came upon a large, massive, hard structure. Square at the bottom and curvy lines formed inside the structure.

At the top of building, I felt there was a circle and a triangle and an enclosed circle which had ~~the~~ a balancing effect or holding effect.

I felt there was a large square part, hard-man-made part to the ~~bottom~~ top of the building and it had a layering effect, you could walk down into it and behind it there were long man-made poles. I felt there was an apparatus here and it was connected with broken pieces and it swayed and it was man-operated and had a very effect - not visible.

I went inside the structure & soon I found a man briefing, informing another group of men with very colorful charts.

I went to another room & distinctly had the effect of military geo-political professionalism. The men who walked here were involved in a decision-making processes.

I went to another room & these people were ~~not~~ specialists - fixing, putting together. This room was sealed off and

It had an opening called by name.
