

SG1J

28 AUG 86

SESSION SUMMARY

MORNING

SITE I (MT. OLYMPUS)

..... feeling of hard, vertical vertical, angles...
misinterpreted as man-made land water
interface..

SITE II (LAKE GEORGE)

..... land, water, mountain interface.....
this interpretation is accurate, however the body
of water is misinterpreted as open and salty... ocean.
..... definitely perceived water, shoreline and mountains
in background

AFTERNOON

SITE I (MOUNTAINS)

..... smooth, vertical feeling felt more
natural though.....

SITE II (RUMS IN PERU)

..... vertical up feeling definitely hard throughout
session eventually decoded signal as vertical
up, across, vertical up, across, vertical up across, etc.
..... there was some confusion in the beginning
as to whether this was a mountain or a structure
..... there seems to be a very subtle difference between
a peak and a right angle at this stage.....
