

21 MAR. all during the night
3 or 4 platoon-size patrols
stay above road and recess
into compound area at first
light. Morning hours are
fairly routine except several
combat vehicles leave compound
and move around area by
road. At set #2 between
paramilitary check point and set #2
a police or customs check point
is also operating.

A column of foot soldiers
armed with light weapons (AKs)
is proceeding in two single files,
one each side of road in
direction from set #2 toward
Compound. Around 1500 a
very fancy, highly sheened, civilian
vehicle with flags flying on fenders

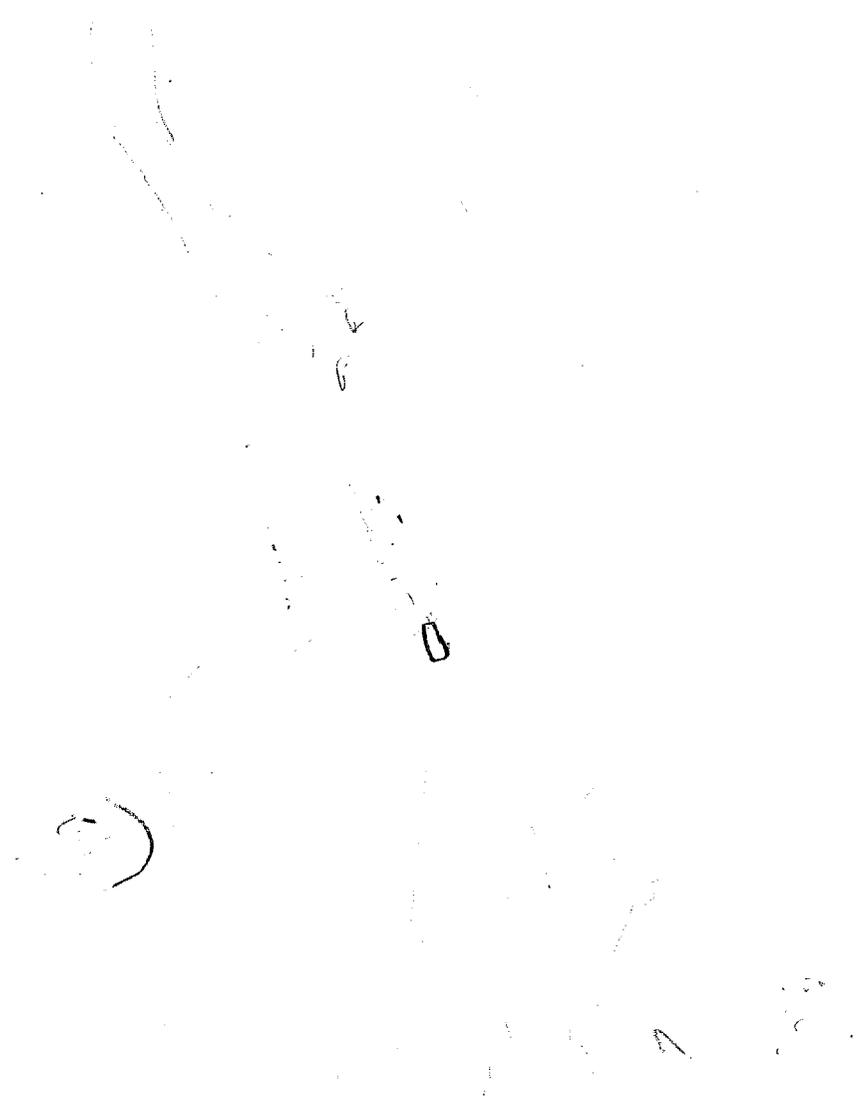

is at compound area but on the road. At approximately 1600 at least two massive explosions occur almost simultaneously near road in the area where foot column was at 1500 or so. Going immediately to compound there is a very large two barreled gun pointing in that direction. Guns are huge, not rifled, and silver inside guns are in tandem so there is a second system with 4 small barrel guns that is built twin guns. TWIN gun is a marriage of high tech electronics and primitive mechanics. System has sharp edge, large components and made is cramped hot and lumpy.
