SUMMARY

Approved For Release 2000/08/08 : CIA-RDP96-00789R001900340001-4

Site is a collection of buildings which together compose some kind of a whole. Land is flat and rolling. Site has a cut off, isolated feeling 20 K to SE is a body of water.

One building is large, wide, and tall. I will call this building A. On the northern side of this building there is some kind of energy. Energy goes out or comes in a northern direction where it ends in a fan shape

There is a similar energetic feeling on the south side. But the energy is somewhat weaker. The energy just seems to dissipate some distance from the building. It is like the molecules just gradually stopped bouncing off each other. There two types of energy (or whatever) end or begin at different spots within building A. The spots within the building where the energy is connected, are interconnected by another kind of energy.

Approved For Release 2000/08/08 : CIA-RDP96-00789R001900340001-4

There is a feeling of

Developing and monitoring ^{panels} this building. There are dials, lights, and levers. People work shift work. There are different categories of people here. Some of these categories are administrators, enforcers and mechanics. There is a feeling of subterfuge and clandestine here. There are different levels here. Levels are separated and secured.

North or North/East of building A is building B TALL, NARROW AND LONG. (NFI) 200 meters N/E of building A is building C. building C is low, long, wide, thick.

Inside building C is warm. There are crackles, Hums and a SHG-link and a SH0000 sound either. Inside building C I feel I should keep looking over my shoulder.

General feelings for what they are worth

1. There is a feeling of not a lot of originality here. It is as if they are duplicating or re-doing something. A feeling here of a lot of Ts and no Ps.
