

~~SECRET~~/NOFORN-SKEET CHANNELS ONLY

acquired a previously identified site, known only to Source. This site, mutually known as "Sanctuary" by the interviewer and the Source, is used to facilitate relaxation in Source and to enable him to more efficiently enter the "altered state" necessary to acquire the target site.

c. (C/NF/SK) Feedback Provided to Source Following Session: Source was told that it was impossible at this time to determine if he had acquired and accurately described the actual target. Key facilities and personalities at this site were, however, verbally labelled by the interviewer to facilitate the reacquisition of these components in future sessions. Source was not provided any indication of when such a session might occur.

2. (U) UNUSUAL OCCURRENCES: None

3. (S/NF/SK) SYNOPSIS OF RAW DATA PROVIDED BY SOURCE:

a. (C/NF/SK) A site surrounded by a chainlink fence, (possibly a double rowed chainlink fence), with a pedestrian as well as a vehicle gate. Both are heavily guarded.

b. (C/NF/SK) A long road leads to a large multistory building, oblong shape with a "bend" or ell attachment, used for scientific research.

c. (S/NF/SK) Within the building is one room containing a large tan colored machine with various knobs, dials and controls. The machine is associated with intense bright white light with a shuttering device that regulates this light's intensity and frequency. Technicians were working with this machine.

d. (S/NK/SK) Another room contained a machine which resembled an iron lung with two large black rings on the side. This machine was used as some sort of regulator.

e. (S/NF/SK) Another area was described as a "garden of lights". This room contained numerous boxed shaped containers lined in a row. Each box radiated a different colored light with a filtering system that was capable of changing the size and color of the light emanating from these boxes.

~~SECRET~~/NOFORN-SKEET CHANNELS ONLY

f. (S/NF/SK) Another area gave an impression of colored light with a liquid density being forced through a series of tubes. The tubes had various channels and routes and as the "liquid light" moved through the tubes it frequently changed colors. An impression of "guidance" was perceived in relation to this machine.

g. (C/NF/SK) Another room contained a series of cylinders or pressure tanks, (like oxygen or acetylene tanks), hooked together in tandem with dials and knobs at the connections.

h. (S/NF/SK) Outside the building, in close proximity, there was a large device set on a concrete pad. The device resembled an elongated dish similar to a sewing thimble, pointed nearly parallel to the ground, (perhaps slightly elevated).

i. (S/NF/SK) In the vicinity of the building (exact direction/distance unknown), there are a series of wood and tar paper buildings. These are false fascades designed to conceal devices in the building. The devices are described as cylinders used to send and receive signals but not in the same manner as radar.

4. (C/NF/SK) PRODUCTION DATA:

a. (C/NF/SK) Source provided a brief handwritten summary of his perceptions immediately following the session. Included with this summary were several hand drawn sketches of key facilities and pieces of equipment noted at the target. These sketches and Source's personal summary are retained in the mission field dossier.

b. (C/NF/SK) A detailed Session Operational Data Report will be prepared at the completion of this mission outlining all information of intelligence value. This report will be prepared for distribution within controlled SUN STREAK (U)/SKEET Channels.
