*Note: Do not discuss your efforts with your fellow sources. You will be given feedback when the intelligence question has been addressed.

SG1J
SRV ENVELOPE, 5 FEBRUARY 1987

Site involves a relatively large, black, "airy" structure on land with cross members, bracing, and interstices, which may be moveable and consist largely of metal components. It is technical in nature and uses electrical and electro-magnetic components and principles. The surroundings at the site are open, spacious, and have large elements of white, grey, and are bright. Small traces of yellow and light neutral blue are also present. Wind is a frequently present element at the site, and cool to cold temperatures are not unusual.* Fresh smells are evident.

Some sort of event or activity is occurring or about to occur in connection with the site. There are two types of people present--those routinely associated with the site, and a second group of which the first is not aware, who are specifically interested in the site or some aspect of it, who are "targeting" it in some sense of the word, and whose attention to the site the first group would not necessarily welcome.

White clothing and some sort of smooth, round, lime-green metal cylinders, relatively heavy for their size, which is relatively small (about the size of a large multi-celled flashlight) seem to be important to the event or the purpose of the un-welcomed group.
