

### Summary of Information

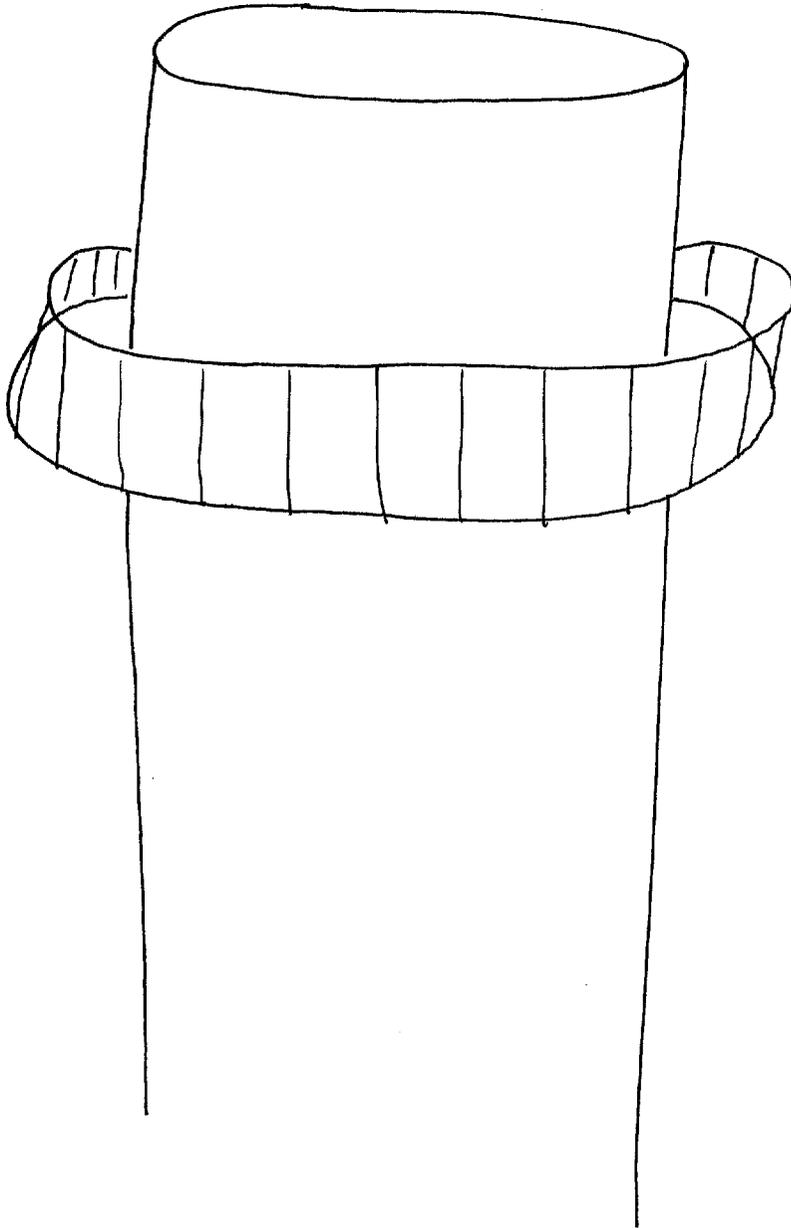

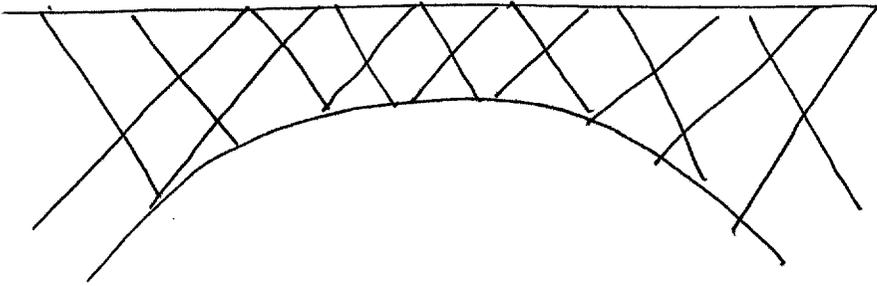

Overall concepts include a sense of height; criss-crossing support systems; a contained spiralling movement; the rapid movement of a smaller object along a larger object; one object clamping or encircling or securing another; and a directed projection of yellowish-orange material at a high velocity.

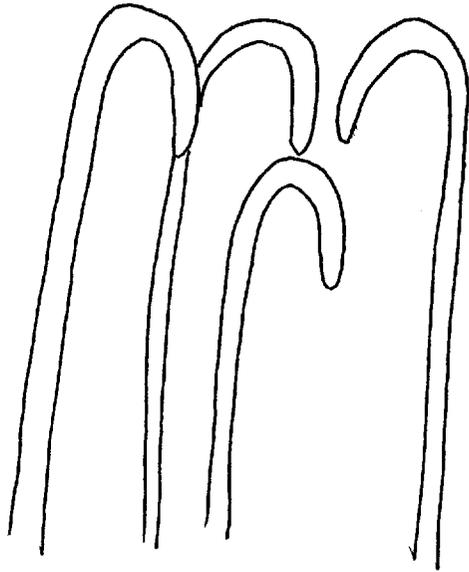

There is the impression that there is movement from the horizontal to the vertical with the "final" position being vertical. This is associated with the concept of "erect" or "erection".

There is a series of cane-like objects clustered together and long, tall cylinders with rings. There is a series of aligned cone-shaped objects. There is an object relating to the term "sled" moving along an angle comprised of criss-crosses.

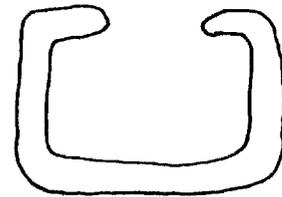

The term "apogee" is important. Starlight is a factor. Something (an object, concept, idea, etc., I can't tell) is a resulting "artifact" of the process/procedure. However, there is a feeling of uncertainty.

There is a roaring sound, a pulsating throb and the movement of energy.
