PROJECT SUN STREAK

WARNING NOTICE: INTELLIGENCE SOURCES AND METHODS INVOLVED

PROJECT NUMBER: 8907   SESSION NUMBER: 03

DATE OF SESSION: 890602   DATE OF REPORT: 890605

START: 0930 (Estimated)   END: 1130   (Estimated time)

METHODOLOGY: WRV   VIEWER IDENTIFIER: 079

---

1. (S/NF/SK) MISSION: Further describe the nature of the developmental activity at a structure of interest based on information surfaced during Session 01.

2. (S/NF/SK) VIEWER TASKING: Viewer 079 tasked in accordance with mission requirements reflected in Para 1, above.

3. (S/NF/SK) COMMENTS: No inclemencies reported. A Summary of Information is attached to this report.

4. (S/NF/SK): EVALUATION:

S/for/V

SUMMARY OF INFORMATION

The new ADP computer system on the Soviet submarine is smaller and more compact than its previous counterparts. It is silver in color. It is module. Modulization is involved here. ①

The "Ritter/Rider" system is the extreme of the overall system. When the system is in use, the productivity of the overall system is enchanced. The rate of speed also increases which means more information can be collected. There is also a wider scope of information that can be collected. The word "cusps" phonetically surfaced here.

The mechanics of the "Ritter/Rider" system is composed of radio active particles. It is made up of crystals or crystalline forms and beams.

The Soviets will use this system to collect signal waves, strands, signals intelligence, and will locate where nuclear reactors are, how many, and when nuclear reactors put on warheads. Artificial intelligence collection methods and satellite communications are involved here.

Currently, the Soviets are targeting Chinese launch pads and countries to the south of China. The system will be targeting the U.S. close to the Christmas time frame.

It was a political decision to utilize this system. This decision was made during the time the Soviets decided to pull out

② Ritter/Rider system
When in use, system efficiency is highly enhanced

of Afghanistan. It was also a political decision to give it a Navy platform so that the Navy can come up to par with the other military branches. Although this system can be physically shelved (placed) almost anywhere, it was decided not to put it on airplane platforms because of the fast vibrations of the plane that can disrupt the collection processes.

Eastern Communist countries were tasked by the Soviets to design a part of the system. However, the East Germans figured out the system and will eventually apply it on the open market.

The names "Meuther" and "Goalie/Gollie" phonetically surfaced as names of individuals who will come into play later who can provide information on the system.

The name "Domner/Donner" phonetically surfaced as a company that may be the U.S. counterpart who may know or have this system.
