Ad fresh - people of various ages, both sexes,
some healthy, others with a variety of physical
illness are being given substances on a regular
basis to determine effect, which is determined
by the results are used to feed into records like death log

and the results are used to feed into records like death log
of certain substances administered
there.

Second floor of area 2 contains 2 distinct areas - one a classroom type room with blackboards on which symbols are written, the other a library type room containing many books, some of which have red bindings. These books contain records of people, identified by ~~name~~ number who have been used to determine the effects of substances being introduced to their bodies (virus is Au bush). The results are obtained by autopsy, entered into a data bank and used to refine or restructure future "experiments". The people used are zombie like during the introduction of the substances and are "Au" like people with no home - no one cares about them and no one misses them. Au bush-like patients in mental institutions or prisons.
