**Mother of glaciers**, the Columbia Icefield straddles the Continental Divide in Banff and Jasper National Parks. The field's melt, feeding three rivers, the Columbia, Athabasca, and North Saskatchewan, reaches the Pacific and Arctic Oceans, and the Atlantic through Hudson Bay. Dozens of glaciers, including Athabasca at left, flow from more than 100 square miles of ice-choked gorges. Mount Columbia, highest in Alberta, towers 12,294 feet at right in this southward view.
