PROJECT SUN STREAK

WARNING NOTICE: INTELLIGENCE SOURCES AND METHODS INVOLVED

PROJECT NUMBER:	0127C (1ng)	SESSION NUMBER:	1
DATE OF SESSION:	24 APR 90	DATE OF REPORT:	25 APR 90
START:	1435	END:	1520
METHODOLOGY:	CRV	VIEWER IDENTIFIER:	052

1. (S/SK) MISSION: To describe the target sites (The Very Large Antenna Array telescope in New Mexico) in Stage 4 terminology.
2. (S/SK) VIEWER TASKING: Encrypted coordinates only.
3. (S/SK) COMMENTS: No Physical Inclemencies. This was 052's first stage 4 session. The 2 week break from sessions caused by the leave schedule caused a very negative effect on 052. There was some site contact in every stage, but it was minimal. The session was finally ended by objectifying 052's frustration and stopping to prevent more. Because there was such an extremely small amount of discernable data, no session summary was requested for this session. Post session training consisted of a complete review of the session for structural accuracy.
4. (S/SK) EVALUATION: *2*
5. (S/SK) SEARCH EVALUATION: N/A

MONITOR: 018

*Summary provided and per
was desired.*

View from the Very Large Array radio telescope in New Mexico

Sensitive enough to detect a one-watt citizens-band-radio transmission from Pluto, the Very Large Array radio telescope in New Mexico (left) acts like a giant zoom lens, making use of the earth's rotation to sweep a circle every eight hours. When its mobile antennas are clustered for a wide-angle view as here, VLA can examine radiation in dust clouds. With antennas extended as far as 21 kilometers apart, it can zoom in on distant objects such as the galaxy NGC 1265
