

SESSION INFORMATION

- A. TARGET DATA:
Task/Target No. : 92-137-P
Session No. : 01
- B. PERSONAL DATA:
Source No. : 025
Monitor's No. : N/A
Beacon/Sender No. : N/A
- C. SESSION DATA:
Date Task Received : 15 Dec 92
Session Date : 15 Dec 92
 Start Time : 1:00
 Stop Time : 2:00
Method Used : ERV
Aids/Distractions (PIs) : N/A
Pre-session Hunches (AVs) : N/A
Date Summary Returned : 15 Dec 92
- D. EVALUATION DATA:
Viewer's Estimate : N/A
Evaluator's Estimate :
- E. SESSION SUMMARY

The target is relating to a situation regarding a structure and its whereabouts. I could see helping hands and a contained fire. This may be a type of distress call or mind orientation. The term "his" and the letters "faife" came to mind. The target is pertaining to an activity.

By Jeff Waggoner

The Jason Project at the Woods Hole Oceanographic Institution provides graphic evidence of what robotics and photonics can deliver without the immediate presence of man.

Woods Hole is the institution that in 1986 brought the world images of the remains of the R.M.S. Titanic, more than 70 years after it sank from sight in the waters of the North Atlantic.

The more recent Jason Project teams fiber optics and imaging with robotics in an effort to make Dr. Robert D. Ballard's dream of "telepresence" — the use of telecommunications technology to create a simulated presence at a remote site — a reality.

The Woods Hole researchers, including Ballard and Project Manager Andy Bowen, developed a fiber optic cable to transmit both data from sensors and television images. A 4000-meter cable was built and special shipboard handling systems were devised to prevent the fiber cable from kinking and causing distortion in the television image. The new cable can transmit to the surface high-quality color television images taken by the robot, Jason.
