- E. SESSION SUMMARY:

The target is a structure or object, land, and activity. The land is mostly hard, flat, smooth, and even. The structure is very large. There seem to be many of these similar structures in the area, but one seems to be of importance as it sticks out somehow. This one particular structure is rounded on top, hard, gives off a reddish glow, and is made out of stone or cement. It is like a statue or sculpture of a person. Something keeps attracting me to the head or the face (a big nose). There is a strong, profound smell associated with this target that makes me sneeze. It is not a pleasant smell. There are also horizontal lines and vertical lines somewhere near the target area. There is also something dome shaped, covering something.

There is a lot of activity at the target site. It seems to be almost chaotic. There are so many of these strange shapes and there are also many people that are walking around, looking at them. But it seems to be a historical and artistic place to be. A place for tourists to visit.

It is possible that the main structure is an artistic sculpture of a political leader, AOL: George Washington. However, AOL's of target area include Easter Island (multiple sculptures made out of stone that resemble heads); and a place where there are many statues and sculptures: a Museum.
