

*The Once and Future Universe*

**With otherworldly eyes, the joint  
Smithsonian-University of Arizona  
Multiple Mirror Telescope (MMT)  
looks out from atop Mount Hopkins  
near Tucson. The telescope's six**

72-inch mirrors, with resolving power equivalent to a single 272-inch mirror, were designed to be integrated by lasers. But moths fluttering on the evening breeze interrupted the beams. Now the images of cosmic objects are coordinated by a video system. The MMT is particularly suited to examine quasars, using their ancient light to probe the most distant margins of space and time.
