WORKING PAPER

Project: 9021
Date: 900424
Time: 1301-1337
Viewer: 018
Session: 01

SUMMARY OF INFORMATION:

1. (S/STD) When and where will the [redacted] off-transfer its load of drug contraband?:

a. WHEN: Not determined in this session. The [redacted] is presently (1300 Local 24 APR 90) still in port awaiting on-loading of drugs.

b. WHERE: Drugs will be "dropped" for later pickup on the northwestern end of a very small island (see Fig. 1) which is part of a cluster of very small, uninhabited islands off the northwestern coast of a much larger island. The northwestern coast of this much larger island looks like a jaguar's head when seen from the air, or on a map. Dowsing produced a general area for this island group at approximately 21 degrees N / 72 degrees W, which is between the Bahamas and the Turk & Caicos Island group (see map, Fig. 2).

2. (S/STD) Determine and describe the vessel's route of travel: Vessel will go directly from Columbia to the dropoff point, via a path which goes northwest from Columbia between Navassa Island and Haiti, then turning to the northeast to go between Cuba and Haiti to the Turk Islands.

3. (S/STD) Determine the destination of the contraband: It will be taken to a storage warehouse somewhere in the same group of islands where it is dropped. From there, the shipment will be broken up, its final destination

being several places around the world.

4. (S/STD) Describe the vessel: The vessel is much larger than a "yacht-size", but is not a large commercial vessel. It appears to be privately owned and operated. Dark black and warm tan stripes on a white background give it an "aztec-like" appearance. Its upper structure has a sloping front.

5. (S/STD) Identify call signs associated with the vessel: No call signs were perceived, but there was an impression that a code phrase of "estoy calliente" would be used in radio communications to denote the drugs being aboard.
