WARNING NOTICE: INTELLIGENCE SOURCES AND METHODS INVOLVED

DATE: 1 OCT 86

TARGET: 0162

SITE DOWSE: TARGET IS
8000 FT NW OF DOWSE
POINT

OUTBOUND TEAM : 1) MR

2) -

INBOUND TEAM: 1) 079

SG1J 2)

GS-12, Interviewer

MISSION EVALUATION:

1. (C/NF/SK) PROTOCOLS:

a. The Remote Viewer was introduced to the Outbound Team (OBT) at 0900 hours, 1 Oct 86. Following this "warm-up meeting both the OBT and the Inbound Team (IBT) were restricted to the area of the unit operational facility with orders not to discuss the particulars of the upcoming mission. During this "restricted" period neither the OBT nor the IBT were permitted to make or receive outside telephone calls or to meet with other members of the unit. The OBT was reindoctrinated on the need to maintain the integrity of this mission by not varying the purpose of the trip to the site to tend to personal needs, e.g., errands, refreshments, etc.

b. At 0930 hours, the actual target, (sealed within an envelope) was provided to the OBT at which time they were permitted to depart the area enroute to the target. Their verbal tasking was as follows:

(1) Do not unseal the envelope until you have moved out of the immediate viewing area of the unit.

(2) Go directly to the target area and remain in the general area (by driving around the block if necessary) until exactly 1000 hours.

(3) At 1000 hours, position yourself at the target area and perform any actions normally associated with the functions of the target, e.g., bowl at a bowling alley, purchase refreshments at a snack bar, etc.

(4) Remain on site for a minimum of fifteen minutes or longer but only if a longer period of time is required to finish a function of the building such as finishing a cup of coffee or similar purchase, etc.

(5) Following this fifteen minute mandatory visit to the site, return immediately to the unit area.

(6) After arriving in the unit area, the OBT is not to discuss the target or events that occurred at the site with anyone in the unit. When the IBT has finished the post-session phase of the mission (sketches, summaries, etc.) the OBT and the IBT will proceed back to the target area, still without comments pertaining to the actual mission.

(7) At the target site, the OBT will retrace their movements at the target while being followed by the IBT. When the target (or specific items at the target) are recognized by the Remote Viewer, he/she will so state with a brief explanation or reference to the data collection phase, if necessary.

(8) Following this second visit, both the IBT and the OBT will return to the unit area at which time the OBT will be released and a general feedback session will be provided to the Remote Viewer.

c. The Interviewer will be responsible for collating the data obtained from the entire session, (session information, post-session interview and on site visit), and from the data an overall evaluation will be given pertaining to the success of this mission based upon the relevance of the material provided and later substantiated. The guidelines for this evaluation will be on a 0-7 point scale of target/data correspondence. This scale is as follow:

7 = Excellent correspondence, including good analytical detail (e.g., naming the site by name).

6 = Good correspondence with good analytical information (e.g., naming the function), and with essentially no incorrect information.

5 = Good correspondence with unambiguous unique matchable elements and little incorrect information.

4 = Good correspondence with several machable elements, but some incorrect information.

3 = Mixture of correct and incorrect elements, but enough of the former to indicate viewer has made contact with the site.

2 = Some correct elements, but not sufficient to suggest results beyond chance expectation.

1 = Little correspondence.

0 = No correspondence.

In addition to the numeric scale of evaluation, the Interviewer may opt to provided other comments on the target/session correspondence as necessary in narrative form. All of this material is then provided to the Remote Viewer for future references and/or discussions with the Interviewer since the material in these reports will be used as the basis for additional skills training, if required.

2. () SESSION RESULTS:

a. () Source had no apparent problem attaining a proper hynagogic state and reported her presence at "sanctuary", (the mid-zone hynagogic state) approximately ten minutes after beginning self regulated relaxation exercises.

b. () During the session Source reported on ^a man made facility where people "worked" but not together. The presence of water "coming out" of something in this facility was also reported. Within the facility, the lighting was poor and there were several types of "machines" one type was operated by the people. Two other types of machines were related to each other in their function. There was also the impression of a dimly lit hall separating rooms in this building. Away from the building there was the impression of "triangles", "pyramids" and floating on water. Finally an impression of mosaic covering in relation to the building was perceived.

c. () The actual target, the Ft. Meade coin operated laundromat has two wash areas separated by a dimly lit hall. In each area there are three distinct types of machines; washers, dryer (both performing related functions) and vending machines operated by the patrons who obviously come to this facility but do not "work together." The floor covering is linoleum tiles giving a "mosaic" affect. The washers, of course, operate by utilizing incoming water pipes i.e. "water coming out" of pipes. The laundromat is across the street from a recreation service parking area containing numerous types of equipment, including a wide array of power and sail boats (triangular, pyramid shaped sails?), which may have driven the impresssion of water and sailing.

d. () This session constitutes the best session to date completed by this Soruce. The data reflects a definite successful acquisition of the target and excellent site reporting. It is hoped that this marks the first of a long line of successes for this highly motivated and dedicated Intelligence Officer.

SG1J

GS-12, DAC
Special Activities Officer

Target Number: 0162

Target Description: The "Wash Tub" Bldg T 6637 located on the corner of Zimborski Ave. and Sidman Rd., Fort Meade. (see map)

Instructions to Outbound Team:

Arrive at the target at or immediately before the designated time. Go into the Wash Tub and observe your surroundings. Examine the equipment and take note of the activity. Determine the cost of a wash/day. Observe others or put a coin in a washer ~~washer~~ and "run a load". Do what you can to "Be There". Imagine yourself frequenting the Wash Tub. Remain at least fifteen minutes.

①

I first saw people. I saw people standing and sitting. The people were quiet. I noticed things around people's neck. Large piece of cloth.

I then saw paper. People were working. I saw white paper and black m.s. Then I felt that I was in an isolated ~~part~~ area. This area was dark. I noticed a small structure. Rather decorative. Music. Wet and cold was associated with this ~~st~~ man made structure. This was where Mel was.

I then could feel people eating & ~~sleep~~ drinking. I felt under the light was on top. I then noticed large pyramids meeting at the tip. This was a feeling of being out doors. I then was in another isolated area & I saw squares with objects in tip a' over a large square. A large piece of cloth with gold was ~~back~~ in back near the light.
