

SESSION INFORMATION

- A. TARGET DATA:
 Task/Target No. : 94-235-0
 Session No. : 01
- B. PERSONNEL DATA:
 Source No. : 049
 Monitor's No. : NA
 Beacon/Sender No. : NA
- C. SESSION DATA:
 Date Task Received : 18 APR 94
 Session Date : 19 APR 94
 Start Time : 0938
 Stop Time : 1036
 Method Used : CRV
 Distractions (PIs) : Massive headache
 Pre-session Hunches (AVs) : JTF-5 stuff; codeword(s)
 Date Summary Returned : 19 APR 94
- D. EVALUATION DATA:
 Viewer's Estimate :
 Evaluator's Estimate :
- E. SESSION SUMMARY:

SG1A The term [] refers to a location. The activity associated with [] has been given a window by the planners of 7 to 10 days to take place. This will occur between April 25 and May 6. However, an extreme natural process or phenomenon will interfere with the development and evolution of [] SG1A

Whatever is being dealt with, it will be brought into this location by air and will be taken away by air.

SG1A [] is a location within an area of extensive sand dunes. This dunes, however, do not occur with what is normally considered a desert environment; they are an anomaly for the area. This location used to be commercially exploited but is no longer viable. This commercial activity was associated with the concept of a "sand mining" or "sand processing" activity.

SG1A Specifically, [] is located on the back side of the sand dunes. It is hidden from a large, developed area (i.e. city) which can be seen in the distance.

This location contains a hard, narrow "L"-shaped feature reminiscent of a small landing strip. This landing strip appears to disappear right into the dunes. However, the foot portion of the "L" runs in front of a large, open structure. This structure feels like an abandoned warehouse or storage facility. It is constructed of blocks reminiscent of cement or poured concrete.

There is a second structure present. It is tall, squarish and constructed of wood. The exterior is faded and it appears very weathered.

The faint outline of a road or trail may be perceived leading away from the larger structure. It may have once been a well used access but is now covered over by sand. It is very hard to perceive.

There are several sets of large power lines and a large suspension bridge associated with the developed area in the distance. There is a mountain range which separates this "city" from a body of water reminiscent of an ocean. The mountains in this particular vicinity are famous for a lot of fog.

The terms "FLAT TOP" and "POT LID" were perceived as associated with this target.

A cement reinforced trough-shape hole has been tunneled into the dunes.

Rollin, fernin; like
sand dunes

View from a distance

Tall, wooden structure;
wood exterior; looks
old, faded, aged.
Associated with concept
of "sand mining" or
"sand processing"
activity.

SG1A

- hard, squared off, trough
like feature
- deep; feels partially
~~buried~~ buried

- unknown object
