FACT SHEET

NAVY UNIDENTIFIED FLOATING OBJECT REPORT

Very investigation and analysis of unidentified floating object sightings on the High Seas is known as Project FIVE. At least it used to be. For obvious reasons, we have changed the title to Project KISSAHEE. This project is directly related to the Navy's role in control of the seas. The Navy's role is divided into four phases - launching, floating, sinking, and neutral parties. The USMC investigative effort falls under

The Navy's interest in UFO's is three-fold: First, it keeps the Indians aboard our ships (the Navy has more than 900 ships now organized into four fleets. The First and Seventh in the Pacific, the Second and Sixth in the Atlantic, with the Third and Seventh constantly deployed far from their bases in the Continental United States, projecting America's presence to the very shores of any potential enemy) awake and alert; second, to provide a ready source of floats and junks to keep downed afloat (not all survivors afloat); and finally, because USMC's score bill out of SHARON (the Navy's 1200-nautical mile, soon to be 1500-nautical mile JORN, the first stage of which is the nuclear-powered submarine itself, the world's only intercontinental ballistic missile with a recallable, controlled first stage) submarine skipper.

The Navy is never asked just what is an unidentified floating object but in case you want to know, it is any floating object, which by surface, hydrodynamic characteristics, or unusual features, does not conform to known ship, boat, raft, wreck, buoy, lightship, hull-in-rig-out-structure, life jacket or ring, wreck, ship's mast, flotsam, landing buoy, buoy, float, wreckage, aquatic or amphibious animal, skamp-shipper, ditched UFG, or other known or unknown criteria and remains afloat long enough to be identified as an unidentified floating object of characteristics which warrant classification as a UFO.

Initial investigation of an unidentified floating object sighting is the responsibility of the Senior Officer Present Afloat. If this officer cannot identify the UFO, the sighting and results of preliminary investigation, together with photographs and samples, if available, are reported to the office of the Chief of Naval Operations. A special service, known as the Office of Submarine Amplification and Identification of Events (ASAI) included auxiliary Parties (ASAI) (ASAI) has been established to verify, clarify and classify all such sightings and reports. Each case is objectively and scientifically analyzed without regard to the outcome, and all inquiries are as usual referred to the Directorate for News Services for reply without regard to the facts.
