

PROJECT BLUE BOOK

The United States Air Force has the responsibility under the Department of Defense for the investigation of unidentified flying objects (UFOs). The name of this program, which had been in operation since 1948, is Project Blue Book. It has been identified in the past as Project 8828 and Project OREGON.

Air Force interest in unidentified flying objects is related directly to the Air Force responsibility for the air defense of the United States. Procedures for conducting this program are established by Air Force Regulation 80-13.

The objectives of Project Blue Book are two-fold first, to determine whether UFOs pose a threat to the security of the United States; and, second, to determine whether UFOs contain any unique scientific information or advanced technology which could contribute to scientific or technical research. In the course of accomplishing these objectives, Project Blue Book strives to identify and explain all UFO sightings reported to the Air Force.

HOW THE PROGRAM IS CONDUCTED

The program is conducted in three phases. The first phase includes receipt of UFO reports and initial investigation of the reports. The Air Force base nearest the location of a reported sighting is charged with the responsibility of investigating the sighting and forwarding the information to the Project Blue Book Office at Wright-Patterson Air Force Base, Ohio.

If the initial investigation does not reveal a positive identification or explanation, a second phase of more intensive analysis is conducted by the Project Blue Book Office. Each case is objectively and scientifically analyzed, and, if necessary, all the scientific facilities available to the Air Force can be used to assist in achieving an identification or explanation. All personnel associated with the investigation, analysis, and evaluation efforts of the project view each report with a scientific approach and an open mind.

The third phase of the program is dissemination of information concerning UFO sightings, evaluations, and statistics. This is accomplished by the Secretary of the Air Force, Office of Information.

The Air Force makes an unclassified flying object report available upon request when the discoverer is unable to identify it.

Reports of unidentified objects in the sky are submitted to the Air Force from many sources. These sources include military and civilian pilots, weather observers, amateur astronomers, business and professional men and women, homeowners, etc.

Frequently, such objects are missiles, balloons, kites, kites, gliders, aerobaloons, aircraft navigation and identification beacons, jet engine exhaust, reentry vehicles, astronomical bodies, and meteorological phenomena are mistakenly reported as unidentified flying objects.

The Air Force groups the evaluations of UFO reports under three general headings: (1) IDENTIFIED, (2) INSUFFICIENT DATA, and (3) UNIDENTIFIED.

IDENTIFIED reports are those for which sufficient positive information has been accumulated and evaluated to permit a positive identification or explanation of the object.
