

Case VI (Serial 4822.00)

An instrument technician, while driving from a large city toward an Air Force base on December 22, 1952, saw an object from his car at 1930 hours. He stopped his car to watch it. It suddenly moved up toward the zenith in a path from right to left at an angle of about 45°. It then moved off to level flight at a high rate of speed, during which maneuver it appeared white most of the time, but apparently veiled three times showing a red side. About halfway through its roll it showed no light at all. It finally assumed a position to the south of the planet Jupiter at a high altitude, at which position it dived back and forth, left and right alternately. Total time of the observation was 15 minutes. Apparently, the observer just stopped watching the object.
