Invest 200, 104 -- 114000, New Jersey, on 12 January, 1948

In view of the unexplained discrepancy of at least one of the witnesses the indications of the report of the laboratory, told investigators nothing but says witnesses can be class to the receipt of the subject or objects either. For instance, the witness states that the first object was in about 1-3 seconds, while the laboratory indicates 1-20 minutes. It should be noted that first incident was automatic and the shorter time period is obviously false; the evidence given by the second observer, there is nothing in the evidence that is contradictory to the notion that the subject observed was acting more than a slow-moving football. The color, position, size and shape, and manner of disintegration all support this view.
